☀ State holiday—office closed

Foliated, micaceous marble boulders in the foreground, with graphitic quartzite (black hills) and marble (light gray hills) in the background. These blueschist-facies-metamorphosed rocks are part of the Mixed Unit of the Nome Group, Seward Peninsula, Alaska. Mountain Avens (large flowers) and Bell Heather (small flowers) are often found growing on calcareous rocks. Photo by Melanie B. Werdon
