**Reviewer's General Comments:**

This report is the culmination of several years of work, and reflects the great amount of thought, care and study that have gone into it. I applaud the authors for carrying through with such a massive project, and this report is a fitting capstone. I have made comments and suggested changes throughout, but none of it is substantive. Overall, it is well written, well organized, and contains a wealth of information.

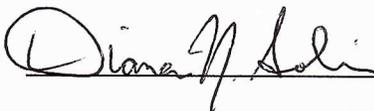

The review package included only the six surficial geologic-map sheets. I believe that another six permafrost sheets are intended to be included; I did not review those. There is no reference to engineering geology in the report; therefore, I do not think that the engineering geology maps are appropriate and should not be included in this report. If they must be included, the report will need to be significantly modified to discuss them and another review will be warranted.

I include my detailed comments on a separate sheet.
