

10 GAMMA CONTOUR  
20 GAMMA CONTOUR  
100 GAMMA CONTOUR  
500 GAMMA CONTOUR  
MAGNETIC LOW

FLIGHT LINE AND DIRECTION

FLIGHT LINE SPACING 3/4 MILES  
FLIGHT ALTITUDE NOMINALLY 1000 FEET ABOVE GROUND  
REGIONAL MAGNETIC FIELD SHEET CENTER 55,740 GAMMAS  
REGIONAL FIELD REMOVED THE FIELD INCREASES  
APPROXIMATELY 5.1 GAMMAS/MILE, N 28° E  
APPROXIMATE FIELD INCLINATION: +74.7°

SCALE 1:250,000

AEROMAGNETIC SURVEY  
SEWARD PENINSULA  
CANDLE, ALASKA

STATE OF ALASKA  
DEPARTMENT OF NATURAL RESOURCES  
DIVISION OF GEOLOGICAL SURVEY  
NORMAN J. VEACH, GEOPHYSICIST

Copies of this map may be obtained from  
The Division at Box 80000, College, Alaska

CANDLE, ALASKA  
AEROMAGNETIC SERIES

The magnetic contours shown on this map represent the total anomalous magnetic field of the earth. Variations in this field are caused by the variable magnetic character of rock units crossed by the survey flights, and hence, can be used to estimate the apparent location of rocks rich in magnetic minerals. Such rock units may be either at the surface of the ground or buried beneath it. Anomalies show both positive and negative variations depending on the shape, attitude, and constituents of local rocks. Geophysical interpretation will be helpful in determining boundaries or depth of burial of anomaly-causing rock units. Some anomalies may be impossible to interpret without further geologic information. Basic profile data is retained at the Division of Geological Survey and should be consulted for detailed analysis.
