Data resulting from the U. S. Minerals Management Service 1993 geologic field program in lower Cook Inlet, Alaska. The data includes stop and sample index maps, sample registry, micropaleo analyses, organic geochemistry, porosity and permeability, paleocurrent, clast type counts, gamma ray, gravity, potassium-argon age, apatite and zircon fission-track age, and geologic measured sections.

Note: Copies of the original field notes are on file at the U. S. Minerals Management Service and at the Alaska Geologic Materials Center.

Received 5 August 1994 Total of 182 pages in report

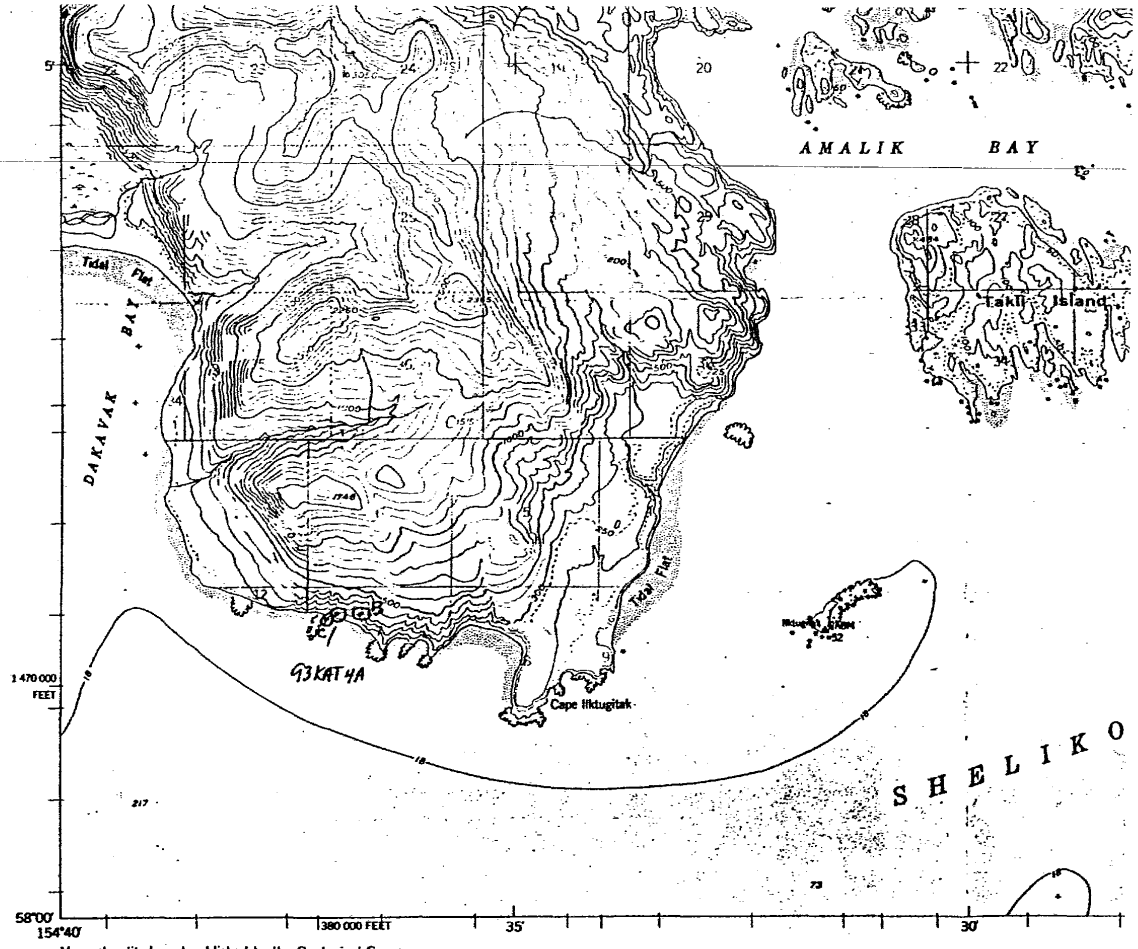
Mt. Katmai
A-2



Mapped, edited, and published by the Geological Survey

Control by USC&GS and USCE

Topography by photogrammetric methods from aerial photographs taken 1951. Map not field checked

Selected hydrographic data compiled from USC&GS Charts 8502 (1:969,761 scale) and 8556 (1:350 000 scale), and from aerial photographs. This information is not intended for navigational purposes

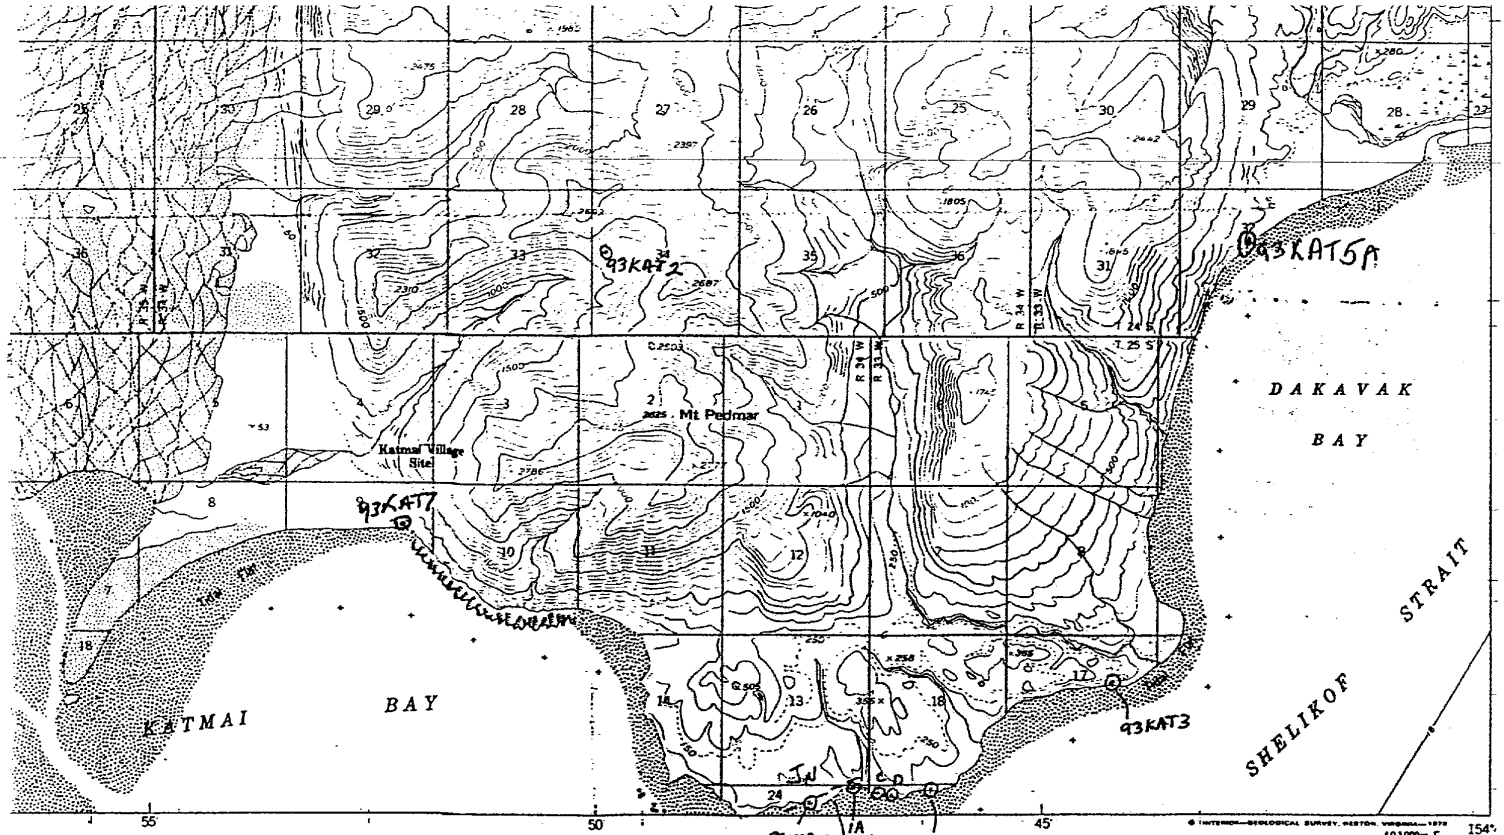
Universal Transverse Mercator projection, 1927 North American datum
10,000-foot grid based on Alaska coordinate system, zone 5
1000-meter Universal Transverse Mercator grid ticks, zone 5, shown in blue

Land lines represent unsurveyed and unmarked locations predetermined by the Bureau of Land Management
Folios S-22 and S-23, Seward Meridian

Swamps, as contoured, indicate only the wetter areas

DEPTH CURVES AND SOUNDINGS IN FEET-DATUM IS MEAN LOWER LOW W
SHORELINE SHOWN REPRESENTS THE APPROXIMATE LINE OF MEAN HIGH WATER
THE AVERAGE RANGE OF TIDE IS APPROXIMATELY 13 FEET

FOR SALE BY U. S. GEOLOGICAL SURVEY
FAIRBANKS, ALASKA 99701, DENVER, COLORADO 80225, OR WASH
A FOLDER DESCRIBING TOPOGRAPHIC MAPS AND SYMBOLS IS AVAILABLE



SCALE 1:63360

1 0 1 2 3 4 MILES

3000 0 3000 6000 9000 12000 15000 18000 21000 FEET

1 .5 0 1 2 3 4 5 KILOMETERS

CONTOUR INTERVAL 100 FEET

DASHED LINES REPRESENT 50-FOOT CONTOURS

NATIONAL GEODETIC VERTICAL DATUM OF 1929

DEPTH CURVES IN FEET-DATUM IS MEAN LOWER LOW WATER

SHORELINE SHOWN REPRESENTS THE APPROXIMATE LINE OF MEAN HIGH WATER THE AVERAGE RANGE OF TIDE IS APPROXIMATELY 7.1 FEET

FOR SALE BY U.S. GEOLOGICAL SURVEY

FAIRBANKS, ALASKA 99701, DENVER, COLORADO 80225, OR RESTON, VIRGINIA 22092

A FOLDER DESCRIBING TOPOGRAPHIC MAPS AND SYMBOLS IS AVAILABLE ON REQUEST

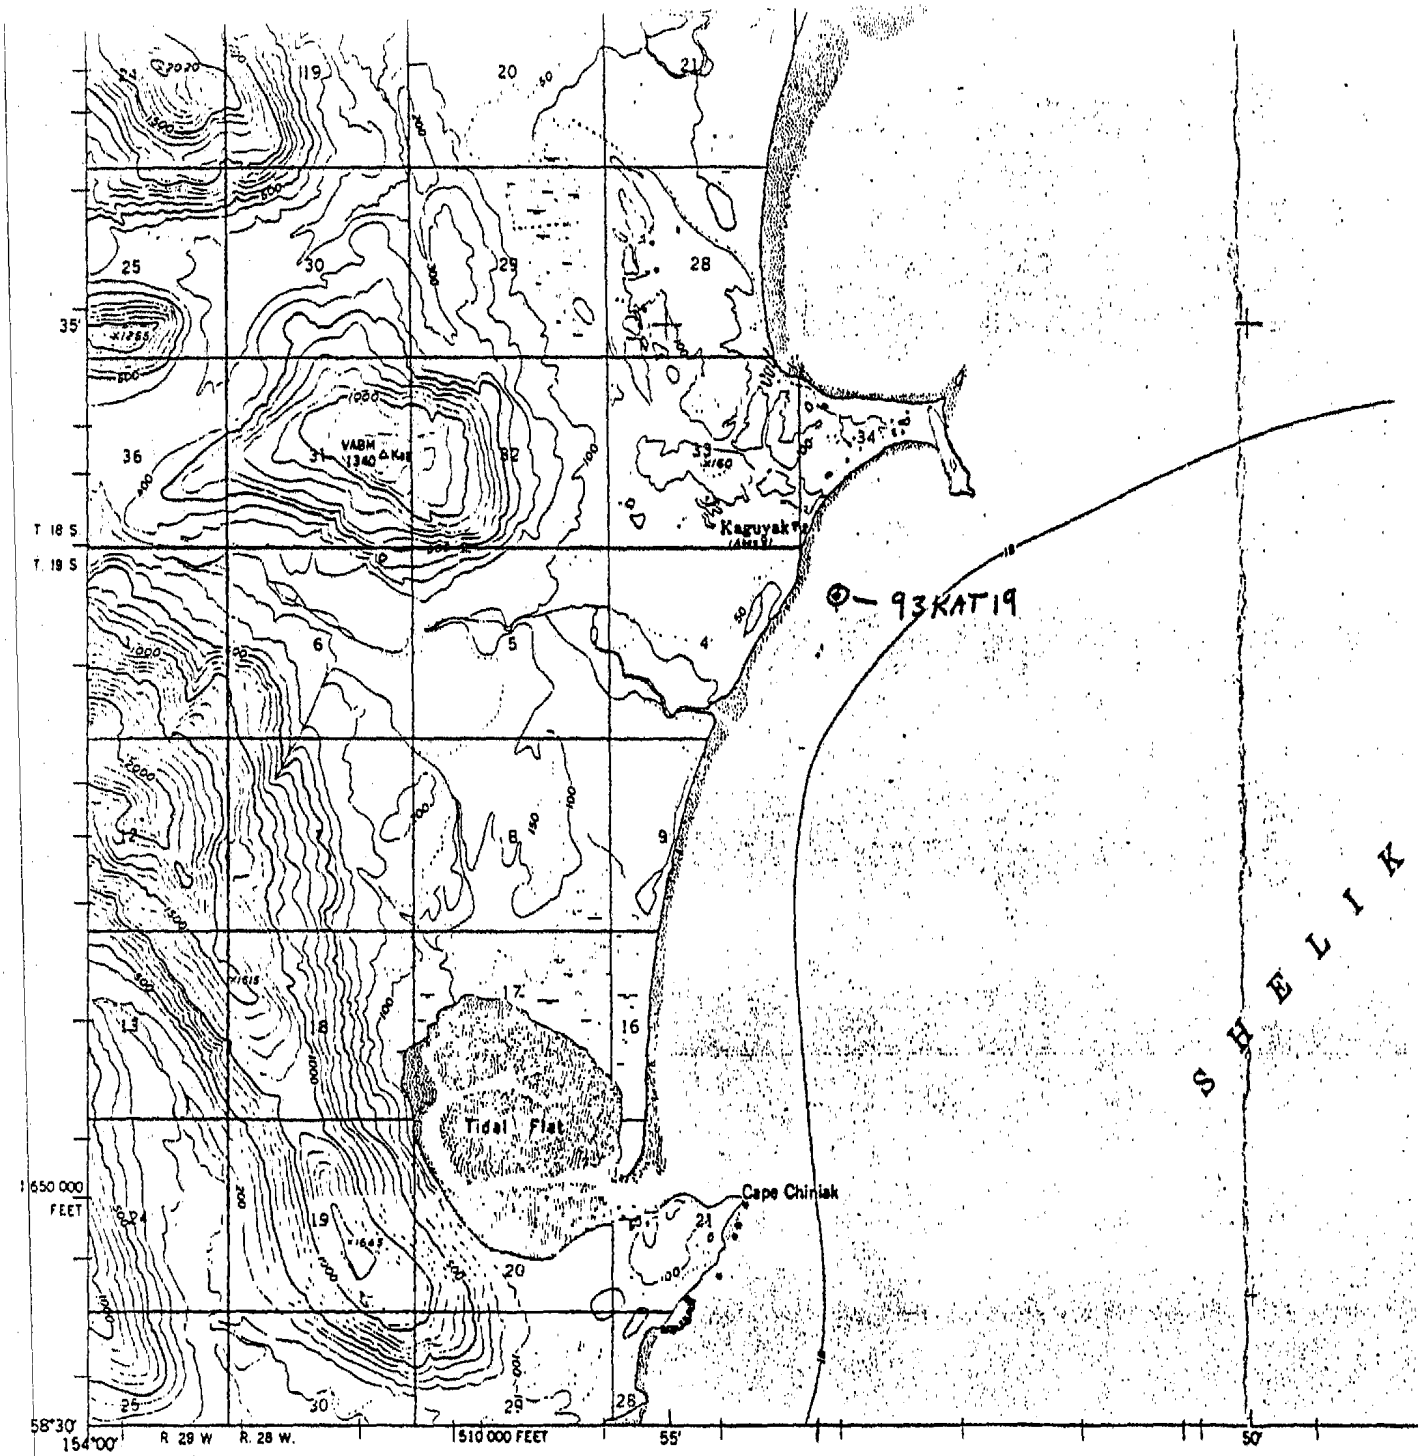
GMC Data Report No. 233



Mapped, edited, and published by the Geological Survey

Control by USC&GS and USCE

Topography by photogrammetric methods from aerial photographs taken 1951. Map not field checked

Selected hydrographic data compiled from USC&GS Charts 8502 (1953) (1:969,761 scale) and 8556 (1952) (1:350 000 scale), and from aerial photographs. This information is not intended for navigational purposes

Universal Transverse Mercator projection, 1927 North American datum
10,000-foot grid based on Alaska coordinate system, zone 5
1000-meter Universal Transverse Mercator grid ticks,
zone 5, shown in blue

Land lines represent unsurveyed and unmarked locations predetermined by the Bureau of Land Management
Folios S-17 and S-23, Seward Meridian

Swamps, as portrayed, indicate only the wetter areas, usually of low relief, as interpreted from aerial photographs

93 Lower Cook Inlet Micropaleo Analyses

The following 64 outcrop samples have been examined for foraminifera and related microfossils. A detailed faunal list and relative abundance count is provided for each sample. The following code applys to the relative abundance counts (very rare=1, rare=2-3, few=4-6, frequent=7-15, common=16-25, abundant >26).

Kamishak Mbr

93KAT101B-1

Haplophragmoides sp.	very rare
Lenticulina sp. (broken)	very rare
Lenticulina secans	rare
Icthyolith	very rare
Inoceramus prisms	abundant

E. Kmet: → Hauterivian - Barremian..

" "

93KAT101B-3

Praebulimina cf. churchi	very rare
Marssonella oxycona	frequent
Saracenaria sp. (silicified)	very rare
Nodosarid fragments (silicified)	rare

— Haut.. Barrem..

93KAT101C-1

Radiolaria?	few
Indeterminate siliceous molds?	rare
Shell fragments	frequent

93KAT102A-2

Barren

93KAT102C-1

Barren

93KAT102D-1

Barren

93KAT103B-1

Twin Glacier

Cenosphaera spp.	abundant
Cyrtocapsa sp.	few

" "

93KAT103D-1

Lenticulina aff. saxonica	very rare
Cenosphaera spp.	Common
Inoceramus prisms	abundant

E. Kmet: → Berr./Valan. → Haut/Barrem.

93KAT103E-2

Dorothia cf. invenusta	rare
Globulina prisca (silicified)	rare

93KAT103E-3

Barren

93KAT104A-1

Inoceramus prisms	common

93KAT104B-1

Barren

93KAT104B-2

Barren

93KAT104C-2

Barren

93KAT106B-2

Shell fragments	common

93KAT107A-1

Shell fragments	common

93KAT107A-2

Shell fragments	common

93KAT109A-2

Inoceramus prisms	abundant

Douglas River 93KAT10H-1

Verneuilinoides bearpawensis	common
Silicosigmoilina californica	frequent
Cribrostomoides sp.	common
Haplophramoides sp.	common
Reophax sp.	frequent
Recurvoides sp.	few
Trochammina sp.	few
Oolina sp. (silicified)	few
Gavelinella sp.	very rare
Indeterminate arenaceous spp.	abundant

Douglas R.	**93KAT10K-1**	
	Haplophragmoides fraseri	frequent
	Verneuilinoides bearpawensis	rare
	Trochammina sp.	rare
	Indeterminate arenaceous spp.	abundant
	Ictyolith	very rare

Arco Oil and Gas Company
Attn: Mr. Chuck Roberts
2300 West Plano Parkway
Plano, TX 75075

Dear Mr. Roberts:

We have completed stable carbon isotope analysis of your samples received recently. The data are reported relative to the PDB standard and are believed accurate to 0.2 per mil.

POTASSIUM-ARGON AGE DETERMINATION — REPORT OF ANALYTICAL WORK

Our Sample No. B-10447 — Date Received: 9/22/93

Your Reference: Phonecall of 12/3/93 — Date Reported: 1/6/94

Submitted By: Steven C. Bergman
ARCO Exploration and Production Technology
2300 West Plano Parkway
Plano, TX 75075

Sample Description & Locality: Sample # 93KAT 25A-1, volcanic sandstone

Material Analyzed: Biotite concentrate, -80/+200 mesh.

$^{40*}Ar/^{40}K$ = .008984 — AGE = 148 +/- 4 M.Y.

Argon Analyses:

$^{40*}Ar$, ppm	$^{40*}Ar$/Total ^{40}Ar	Ave. $^{40*}Ar$, ppm
.01899	.358	.01890
.01880	.576	

Potassium Analyses:

% K	Ave. % K	^{40}K, ppm
1.788	1.763	2.103
1.738		

Constants Used:

$\lambda_p = 4.962 \times 10^{-10}$/year
$(\lambda_e + \lambda'_e) = 0.581 \times 10^{-10}$/year
$^{40}K/K = 1.193 \times 10^{-4}$ g/g

$$AGE = \frac{1}{\lambda_p + (\lambda_e + \lambda'_e)} \ln \left[\frac{\lambda_p + (\lambda_e + \lambda'_e)}{(\lambda_e + \lambda'_e)} \times \frac{^{40*}Ar}{^{40}K} + 1 \right]$$

Note: $^{40*}Ar$ refers to radiogenic ^{40}Ar.
M.Y. refers to millions of years.

To: Steve Bergman
From: Shari Kelley
Date: 3/21/94
Subject: Procedures used for 1993 South Alaska FT samples.

Three apatite and five zircon splits from South Alaska were received on 11/1/93.

None of the zircon fractions were treated with aqua regia to remove pyrite.

The following zircon split was not dated due to insufficient zircon:
93MAT4/9

The zircons were mounted in Teflon, polished, and etched in NaOH/KOH at 230°C for the times (in hours) shown in the table below. Two of the samples contained zircon populations that had similar etching characteristics, so only one mount was made for these samples. Two samples, 93KAT106A and 92MAT4/87, contained zircon populations that had varying etching characteristics. These mounts were cut in half and each half was etched for a different amount of time in an attempt to attain optimum etch conditions for each population. The numbers of the grains dated in each mount (keyed to the attached data sheets) for samples with two grain mounts are shown in parentheses.

Sample	Mount 1	Mount 2
93KAT25A	8	
93KAT106A	5	8
	(1-4)	(5-20)
93KAT106B	7	
93MAT4/87	7	8
	(7-11)	(1-6)

The zircons were placed in a reactor package with Fish Canyon zircon age standards and Corning (CN-5) fission-track glass standards. The neutron flux for the reactor run was determined from glass standards and the accepted ages of the zircon standards.

The color and general morphology of the dated zircon and apatite is noted next to the grain number on the attached data sheets. The color is listed first and the shape is listed second. The following code is used:

YB = yellow-brown	E = euhedral
Y = yellow	SH = subhedral
RED = red	SR = subround
B = brown	R = round
RB = red-brown	
O = orange	

Apatite grains were mounted in epoxy on a 1 cm^2 glass slide, polished to expose the grains, and etched for 25 seconds in a 5 M solution of nitric acid to reveal the fission tracks. The apatite samples were placed in a reactor package with Durango apatite (Baron collection) age standards and Corning (CN-6) fission-track glass standards.

Confined track lengths were measured both in the age mounts and in separate grains mounts that had been irradiated for 72 hrs at a distance of 7 cm from a Cf^{252} source. The Cf^{252} track density was on the order of 7.5 to 8.7 x 10^5 tracks/cm^2.

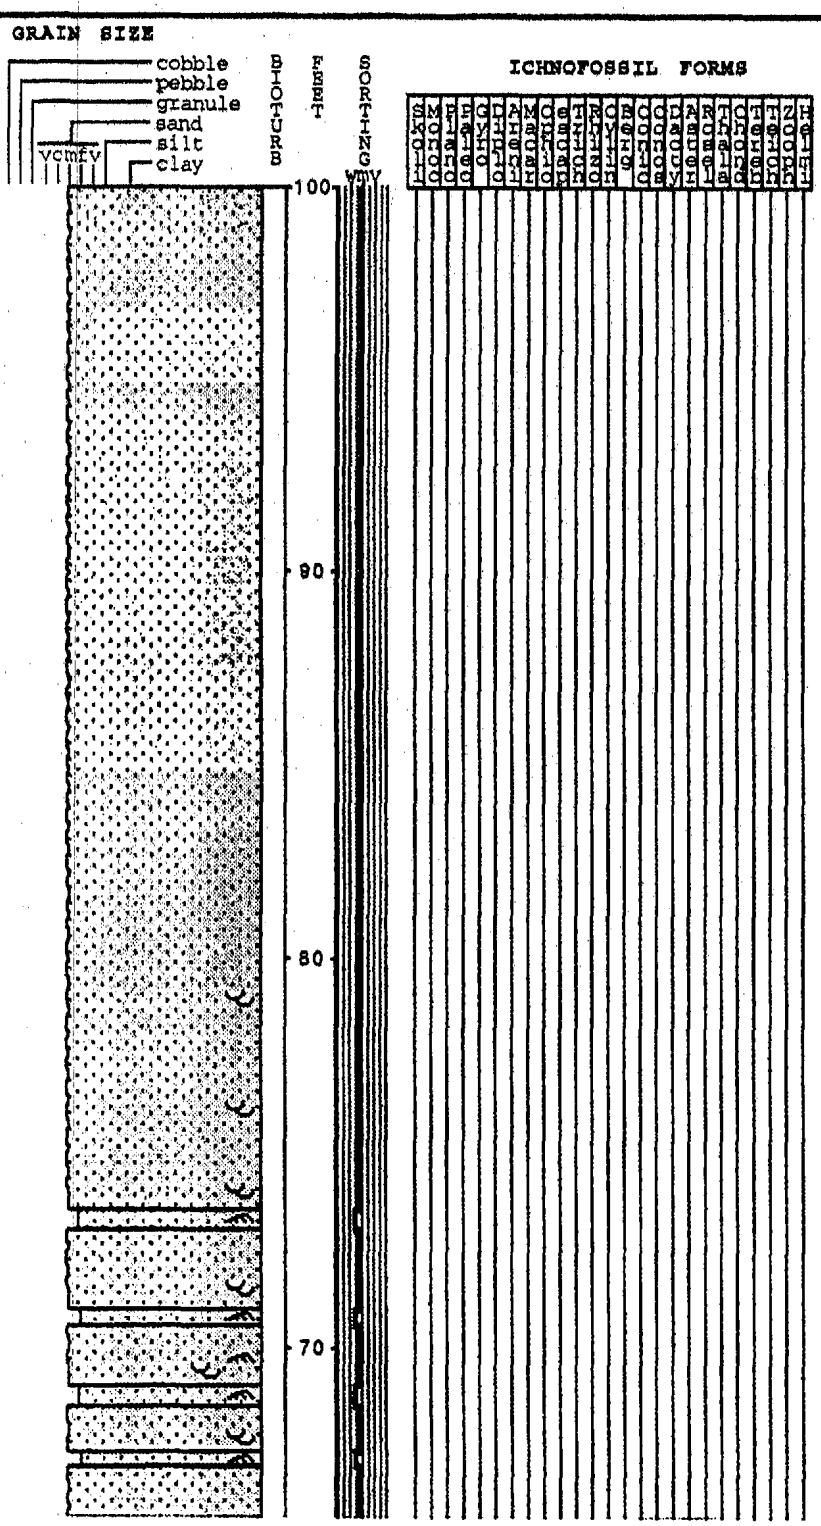
MS 93LCP1 - SADDLE MTN.

NW/-27 -2S -20W Seldovia Quad D8

Date logged: August 28, 1993

Logged by: Morris, Doherty, Verseput, Van Fleet, Comer, Kruegar, Turner

Remarks: This section represents the Saddle Mountain Member in the Upper Cretaceous. This section was not very well exposed.



Section from 75' to top was estimated in thickness and lithology was based on cursory investigation up to 85'.
