

- Andesitic agglomerate and flows
- Graywacke, conglomeratic graywacke, banded siltstone-argillite-graywacke; gray to greenish gray; minor black to green slate, dark gray limestone and phyllite. Andesite and basalt flows indicated by check pattern (vvv) where recognized.
- Finely interbedded black slate and black siltstone, black argillite, some black graywacke beds. Has gradational contacts with graywacke in some areas
- 6** Unit (see table 1)
- Granodiorite-quartz diorite
- Bedding attitude, arrow shows plunge of folds or crenulations
- Foliation attitude, arrow shows plunge of folds or crenulations
- Fault or shear zone (defined, approximate)
- Lithologic contact (defined, approximate, assumed)
- Anticline (assumed)
- Adit
- Shaft
- Mine (not visited)
- Prospect (not visited)
- Logging road
