

DESCRIPTION OF MAP UNITS

- Poor - Only 1:1,000,000-scale geologic mapping is available; only some obvious composite landforms can be identified on 1:63,360-scale or larger-scale topographic maps.
- Moderate - A 1:250,000- or 1:125,000-scale geologic map is available; known to be generally reliable because of limited field observations, a few laboratory tests, or both; interpretation of 1:65,000- or larger-scale aerial photographs is not verified by field observations.

MAP SOURCES

- Gehrels, G.E., and Berg, H.C., 1984, Geologic map of southeastern Alaska, U.S. Geological Survey Open-file Report 84-886, 29 p., scale 1:600,000, 1 sheet.
- Pinney, D.S., 1992, photointerpretation.
