

DESCRIPTION OF MAP UNITS

- Fair - A reconnaissance-series 1:250,000-scale geologic map is available but has not been reliably verified by field observations, laboratory tests, or both; interpretation of 1:250,000-scale satellite imagery is not verified by field observations; major landforms identified on satellite imagery or topographic maps are composite and identification of individual landforms is not possible.
- Good - A 1:63,360- or larger scale geologic map is available; partially verified by field studies, a few laboratory tests, or both; interpretation of 1:65,000- or larger scale aerial photographs has limited or spotty field verification.
