Figure 1: Aeromagnetic map of the Chukchi area, Alaska. Magnetic values in nanoteslas. Positive magnetic areas have high values and are shown in purple and orange.

Figure 2: Shadow map of the aeromagnetic data from the Chukchi area, Alaska. Illumination source is at 111 degrees. High magnetic values appear like the tops of mountains that are lit by sunlight. This image emphasizes northeast and north-trending structures.

Figure 3: Shadow map of the aeromagnetic data from the Chukchi area, Alaska. Illumination source is at 205 degrees. High magnetic values appear like the tops of mountains that are lit by sunlight. This image emphasizes northwest-trending structures in the southern half of the image.

Figure 4: 30m soil resistivity map of the Chukchi area, Alaska. Resistivity values in ohm-m. Conductive units have low values and are shown in purple and orange on this map.

Figure 5: Shadow map of the aeromagnetic data from the Chukchi area, Alaska. Illumination source is at 205 degrees. High magnetic values appear like the tops of mountains that are lit by sunlight. This image emphasizes northwest-trending structures.

Figure 6: 30m soil resistivity map of the Chukchi area, Alaska. Resistivity values in ohm-m. Conductive units have low values and are shown in purple and orange on this map.
