## Alaska

By H. P. Eisenhuth

### INTRODUCTION

This report lists the streamflow stations in Alaska for which records have been or are to be published in reports of the Geological Survey for periods through September 30, 1967. It supersedes Geological Survey Circular 516.

Basic data on surface-water supply of Alaska have been published in bulletins or water-supply papers of the Geological Survey or in reports of other agencies. Water-Supply Paper 1372 contains a summary of monthly and annual discharges through September 1945 for all previously published records, as well as records of daily and monthly discharges for the water years 1946-50 which had not been published previously. For the water years 1951-60, data have been published in water-supply papers as shown in the following list.

<u>Water year</u>	<u>WSP</u>	<u>Water year</u>	<u>WSP</u>
1951-53. . . . .	1466	1958. . . . .	1570
1954-56. . . . .	1486	1959. . . . .	1640
1957. . . . .	1500	1960. . . . .	1720

Beginning in 1961, the annual series of water-supply papers on surface-water supply was changed to a 5-year series, the first of which will be for 1961-65. In order to meet interim requirements, beginning in 1961, the Alaska district issues a report annually containing streamflow records for Alaska.

In addition to the continuous-record gaging stations, this index includes crest-stage and low-flow partial-record stations. A continuous-record station is a gaging station on a stream or reservoir for which the discharge, stage, or contents is published on a daily, weekly, or monthly basis for a continuous period of time. A crest-stage partial-record station is a streamflow station for which only the annual maximum discharge is published over a period of years for use in floodflow analyses. A low-flow partial-record station is a streamflow station for which only discharge measurements made at base flow, when streamflow is primarily from ground-water storage, are published. Measurements are generally collected over a period of five years or more for use in low-flow analyses. Discharge measurements have been made at many sites and published as miscellaneous measurements. Such measurements are not included in this index except those made in earlier years at sites now classified as low-flow partial-record stations.

Explanation of reference marks is given at the end of the index.

An alphabetical list of streams is given on pages 16-18.

### DOWNSTREAM ORDER

The stations in this index are listed in the downstream order used in the series of water-supply papers on surface-water supply of the United States since 1951. Starting at the headwater of each stream all stations are listed in a downstream direction. Tributary streams are indicated by indentation and are inserted between main-stem stations in the order in which they enter the main stream. To indicate the rank of any tributary on which a record is available and the stream to which it is immediately tributary, each indentation in the listing of stations represents one rank. A stream name, only, is inserted where necessary for the purpose of showing the proper rank or order of tributaries.

### STATION NAMES

Station names are given in their most recently published form. Parentheses around part of a station name indicate that the enclosed word or words were used in an earlier published name of the station or as an alternate name. Parenthetical explanations are also used to indicate that a stream of a different name is the head of the main stream by use of "(head of \_\_\_\_\_ River)" and that the name of the main stream has changed by use of "(continuation of \_\_\_\_\_ River)."

## STATION NUMBER

As an added means of identification, each continuous- and partial-record station has been assigned a station number. The numbers have been assigned in the same downstream order used in this Index. In assigning station numbers, gaps were left to allow for new stations that may be established; hence the numbers are not consecutive. The first two digits of the complete number for each station identify the area; they are 15 for all stations in this report. The number given consists of only the essential digits of the complete number. For example, for a station with the complete number 15-0120.00, the station number shown in this Index is 120.

## DRAINAGE AREA

The drainage area, in square miles, is the latest figure published or otherwise available at this time.

## PERIODS OF RECORD

Under "Periods of record" are three columns. The first column, "Daily or monthly figures," shows the periods of record for continuous-record gaging stations. The dates given are the calendar years in which records began or ended; breaks of less than a year are not shown. For example, if a record began in October 1923, ended in April 1932, began again in March 1933, and ended in September 1944, the period of record would be shown as 1923-44.

The second column, "Annual peaks," shows the period of record for crest-stage partial-record stations. The dates given are the water years for which the annual maximum discharge is available. The water year begins October 1 and ends September 30. In listing the water year, only one date is shown; for example, 1952 stands for the water year October 1, 1951, to September 30, 1952.

The third column, "Low-flow measurements," shows the period of record for low-flow partial-record stations. The dates given are the water years in which base-flow measurements were made at low-flow partial-record stations; breaks of less than two years are not shown. Prior to the 1958 water year, such measurements were published in tables headed "Miscellaneous discharge measurements" or "Discharge measurements at sites other than gaging stations." Many discharge measurements have been made at miscellaneous sites which are not listed in this Index because the data collected were not sufficient to qualify the site as a low-flow partial-record station.

A date followed by only a dash shows that the station was continued in operation beyond September 30, 1967. A date followed by a period indicates discontinuance. A date followed by a semicolon indicates a break in the collection of records.
