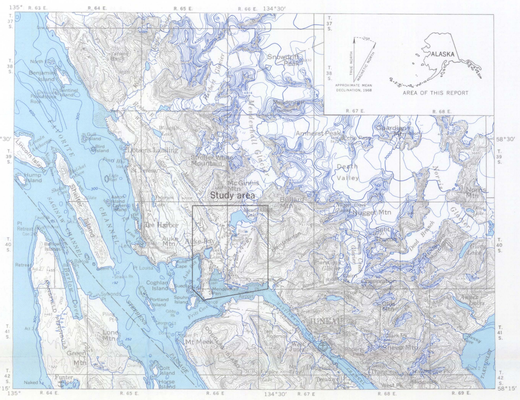
UNITED STATES GEOLOGICAL SURVEY

PREPARED IN COOPERATION WITH THE
GREATER JUNEAU BOROUGH, ALASKA

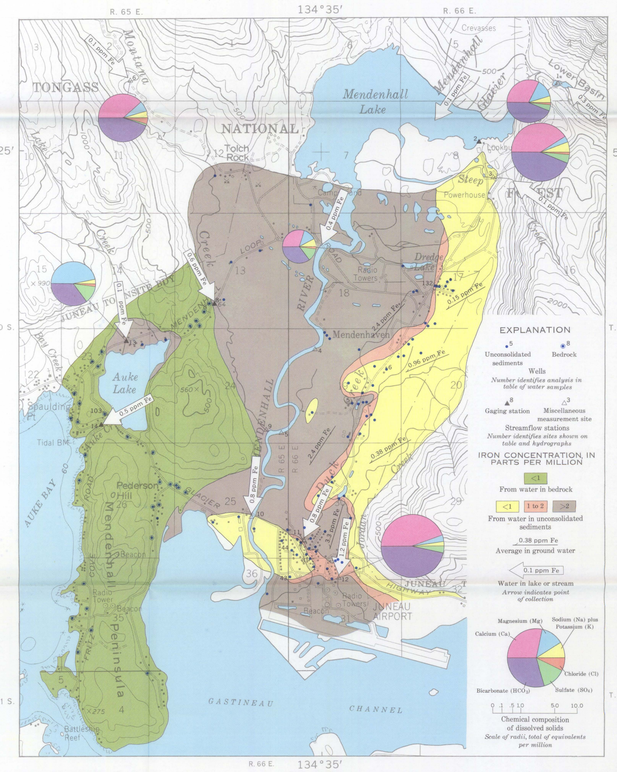
HYDROLOGIC INVESTIGATIONS
ATLAS HA-259



INDEX MAP

AREAL VIEW OF MENDENHALL VALLEY, MENDENHALL GLACIER IN THE BACKGROUND, SEPTEMBER 1966

PANORAMIC VIEW OF THE MENDENHALL GLACIER TERMINUS, APRIL 1966

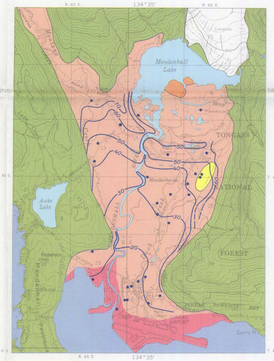


Base from U.S. Geological Survey, Juneau (B-2), 1:63 360, 1962

Geology by W. W. Barnwell and D. A. Sommers, 1965

SCALE 1:31 680
1 MILE
1 KILOMETER
CONTOUR INTERVAL 100 FEET
DATUM IS MEAN SEA LEVEL
DEPTH CURVES IN FEET—DATUM IS MEAN LOWER LOW WATER
SHORELINE SHOWN REPRESENTS THE APPROXIMATE LINE OF MEAN HIGH WATER
THE MEAN RANGE OF TIDE IS APPROXIMATELY 14 FEET

QUALITY OF SURFACE AND GROUND WATERS MAP



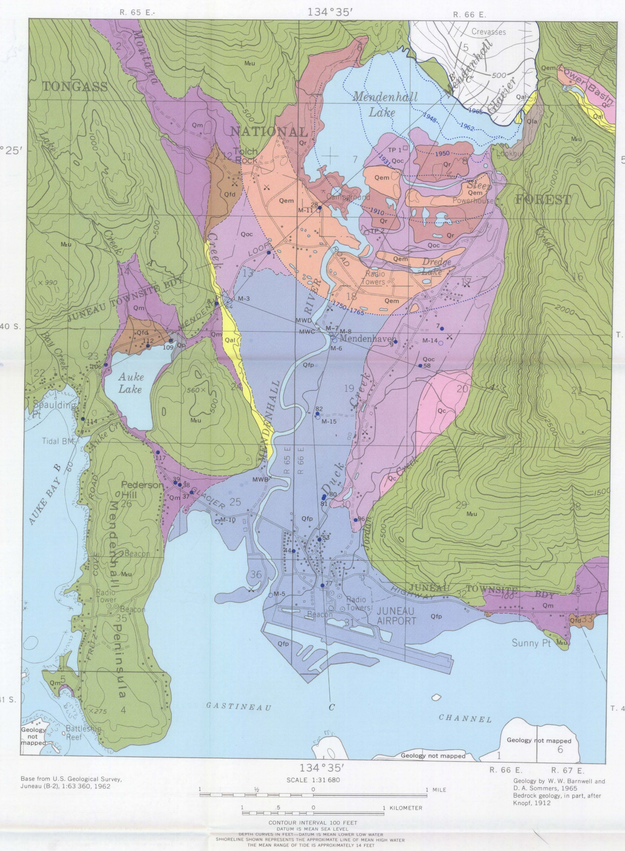
Base from U.S. Geological Survey, Juneau (B-2), 1962

SCALE 1:63 360
2 MILES
2 KILOMETERS
CONTOUR INTERVAL 100 FEET
DATUM IS MEAN SEA LEVEL
SHORELINE SHOWN REPRESENTS THE APPROXIMATE LINE OF MEAN HIGH WATER
THE MEAN RANGE OF TIDE IS APPROXIMATELY 14 FEET

EXPLANATION

- Ice
- Fresh-water lake or stream
- Salt or brackish surface water
- Area where ground water is obtained from bedrock
- Area where ground water is obtained from unconsolidated sediments
  Pattern indicates area where shallow wells yield brackish water
- Area favorable for the construction of galleries
- Area favorable for large capacity water wells
- Well used for control
- 50 Water-level contour
  Shows altitude of water level above mean lower low water. Contour interval 10 feet

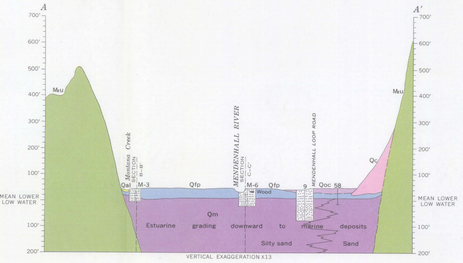
OCCURRENCE OF WATER AND ICE MAP

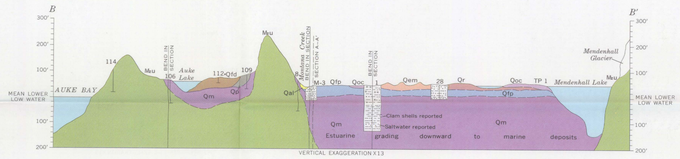


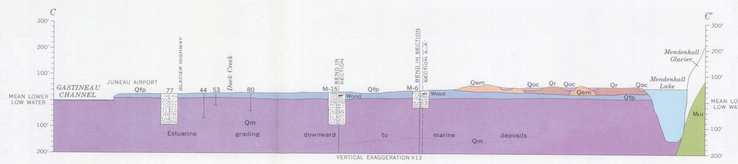
Base from U.S. Geological Survey, Juneau (B-2), 1:63 360, 1962

Geology by W. W. Barnwell and D. A. Sommers, 1965
Bedrock geology, in part, after Knopf, 1912

SCALE 1:31 680
1 MILE
1 KILOMETER
CONTOUR INTERVAL 100 FEET
DATUM IS MEAN SEA LEVEL
DEPTH CURVES IN FEET—DATUM IS MEAN LOWER LOW WATER
SHORELINE SHOWN REPRESENTS THE APPROXIMATE LINE OF MEAN HIGH WATER
THE MEAN RANGE OF TIDE IS APPROXIMATELY 14 FEET







SURFICIAL GEOLOGIC MAP AND SECTIONS

EXPLANATION

GEOLOGIC FORMATIONS AND THEIR WATER-BEARING PROPERTIES

QUATERNARY

Qal — **Alluvial deposits**
Sand and gravel, well washed and sorted by stream action, better than average permeability, will yield moderate supplies of water

Qp — **Peat**
Deposited marginally to Auke Lake as much as 60 feet thick. Not water bearing

Qc — **Colluvial deposits**
Landslide and talus deposits, chiefly very coarse boulders and rock fragments, poorly sorted. Not a source of water

Qfp — **Flood-plain and outwash deposits**
Silt and sand, locally gravel and peat, yield moderate quantities of water having iron content more than 3 ppm and high silt content. Relatively impermeable

Qoc — **Abandoned outwash channel deposits**
Sand and gravel, locally boulders, predominantly younger than A. D. 1750, arcticst aquifers in valley. May produce large quantities of water having relatively low iron content

Qfd — **Alluvial fan and delta deposits**
Sand and gravel, locally silt and clay, yield moderate quantities of water

Qr — **Glacier recessional deposits**
Silty sand and gravel yield moderate quantities of water. Include some outwash or alluvial deposits and contain permeable sands in abandoned stream channels

Qem — **End-moraine deposits**
Cobbles, gravel, and silty sand, predominantly coarse and poorly sorted, yield moderate quantities of water

Qla — **Lateral glacier margin deposits**
Silty gravel and sand, locally coarse boulders, probably yield moderate quantities of water. No known wells

Qm — **Alluvial, estuarine, and marine deposits**
Gradational from fossiliferous, older (late Wisconsin) clay, sand, gravel, and boulders, which generally are not water bearing, to younger (Recent) deposits of clay, silt, and sand, which yield moderate quantities of water

Holocene / Pleistocene

UNCONFORMITY

MESOZOIC

Mu — **Metamorphic rocks of igneous and sedimentary origin**
Greenstone, graywacke, argillite, slate, quartz, diorite, and gneiss. Average yield 3 gpm or less

Contact
Dashed where approximately located; short dashed where inferred

Gravel pit

1962 — Position of glacier front at specified year
Dotted where inferred

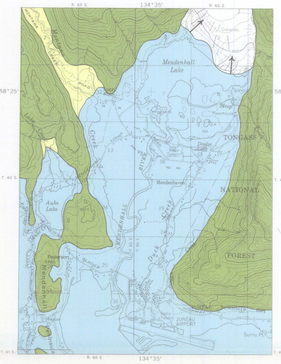
Well

M-11 — Test hole

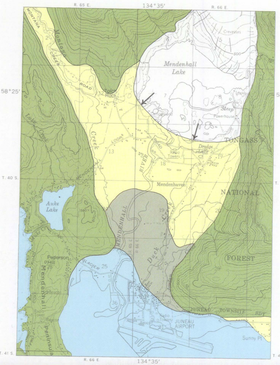
MWD — Wood sample

TP 1 — Test pit

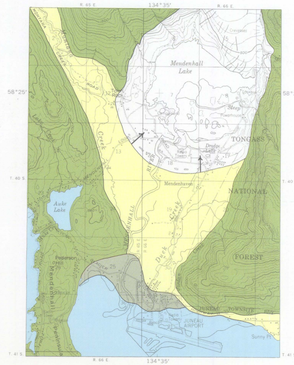
PUMPING FROM TEST PIT NO. 1 NEAR MENDENHALL LAKE IN APRIL 1966



MARINE PHASE (10,000–4500 B. C.)



ESTUARINE AND NONMARINE PHASE (4500 B. C.–A. D. 1750)



NONMARINE PHASE (A. D. 1750 TO PRESENT)

EXPLANATION

- Ice
- Upland erosion
- Marine deposition
- Glacial advance
- Nonmarine deposition
- Glacial recession
- Estuarine deposition

Base from U.S. Geological Survey, Juneau (B-2), 1962

SCALE 1:63 360
2 MILES
2 KILOMETERS
CONTOUR INTERVAL 100 FEET
DATUM IS MEAN SEA LEVEL
SHORELINE SHOWN REPRESENTS THE APPROXIMATE LINE OF MEAN HIGH WATER
THE MEAN RANGE OF TIDE IS APPROXIMATELY 14 FEET
