

- Quaternary sand and gravel
- Sandstone
- Siltstone
- Silty claystone
- Claystone
- Fault (Dashed lines were approximately located; arrows indicate relative direction of movement.)
- Volcanic ash
- Coaly claystone
- Bone lenses
- Coal
- Concreted
- Buried coal beds

STRATIGRAPHIC SECTIONS OF COAL-BEARING STRATA,
EAST SHORE OF COOK INLET NORTH OF DEEP CREEK

Localities 60-122

Figures in parentheses opposite coal beds were obtained by subtracting total thickness of partings from total thickness of partings. The correction to the equivalent thickness used by the U.S. Geological Survey in evaluating coal lands (U.S. Geol. Survey Bull. 537, p. 70). Figures not shown for beds less than 1 foot thick.
