

SKYHUB EXPLORER

Your Gateway to Elevation and Imagery Data

Skyhub Explorer is an interactive map for finding elevation and imagery data across Alaska. It shows what partners have collected – where, when, and at what quality – and links you directly to the source for streaming or download. Agencies, communities, researchers, and industry use it to move faster on resource development, hazard mitigation, infrastructure, and community planning. Data that already exists saves the time and cost of collecting it again.

Critical Data, Trusted Sources

Skyhub connects you to aerial & satellite imagery, topographic and topobathymetric lidar stewarded by partners across Alaska, discoverable in one place.

Why It Matters

Skyhub turns past data investments into a statewide resource.

Efficient Investment

Fewer duplicate surveys, better-targeted new ones.

Faster Planning

Project-ready data now, without new collections.

Lasting Record

Archived and accessible long after projects end.

FASTER DISCOVERY AND ACCESS

FIND DATA

See what imagery and lidar exist for any part of Alaska.

CHECK STATUS

See when it was collected, and what's being collected now.

ASSESS QUALITY

See resolution and accuracy to judge fit for your project.

INSTANT ACCESS

Go straight to download links and live services.
