

# Automation... the “Easier Button” to Parcel Data Governance

Dustin Walters  
Account Executive – 1Spatial Inc  
[Dustin.Walters@1spatial.com](mailto:Dustin.Walters@1spatial.com)

# Spatial Data Governance and Data Management

## Data Lifecycle:

- data gathering or creation, storage, maintenance and processing through to the disposal of data

## Data management:

- the "umbrella term" for the 11 data functions, which include Data Governance

## Data governance:

- Setting of policies, processes, and people (roles and responsibilities) delivering data management

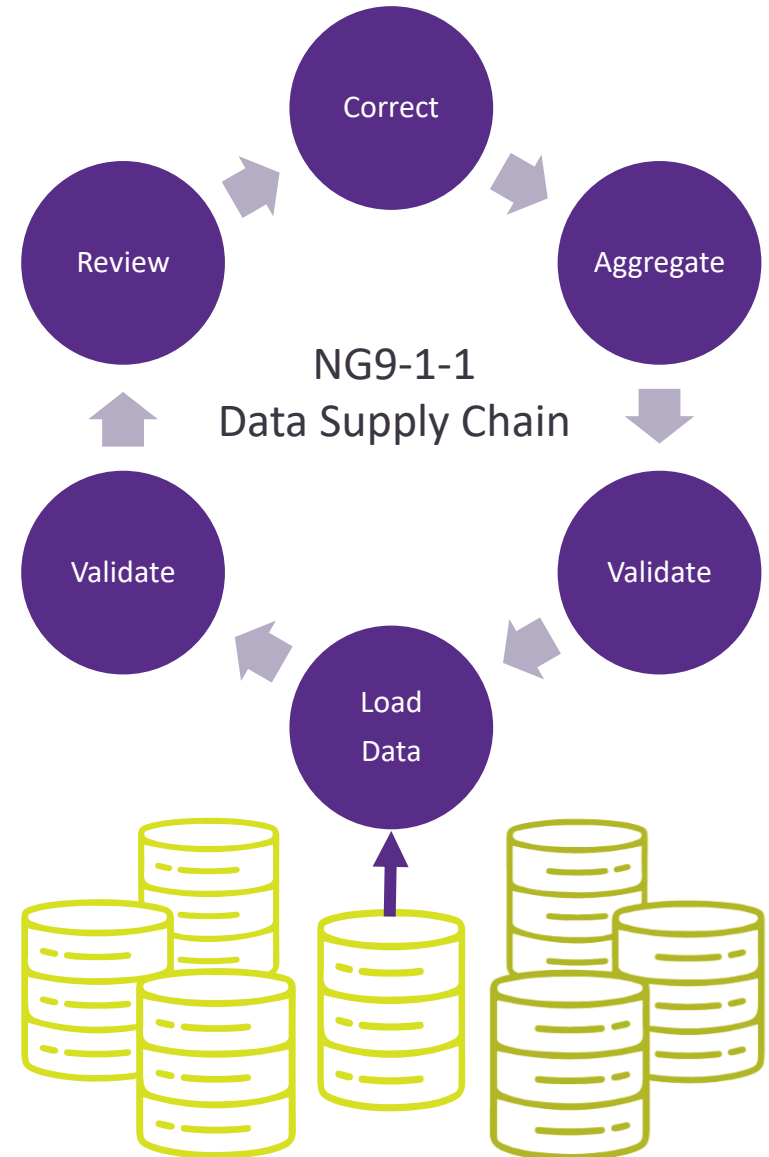

Source: DAMA DMBOK

# Typical Geospatial Data Supply Chain

## AN NG9-1-1 Data Supply Chain

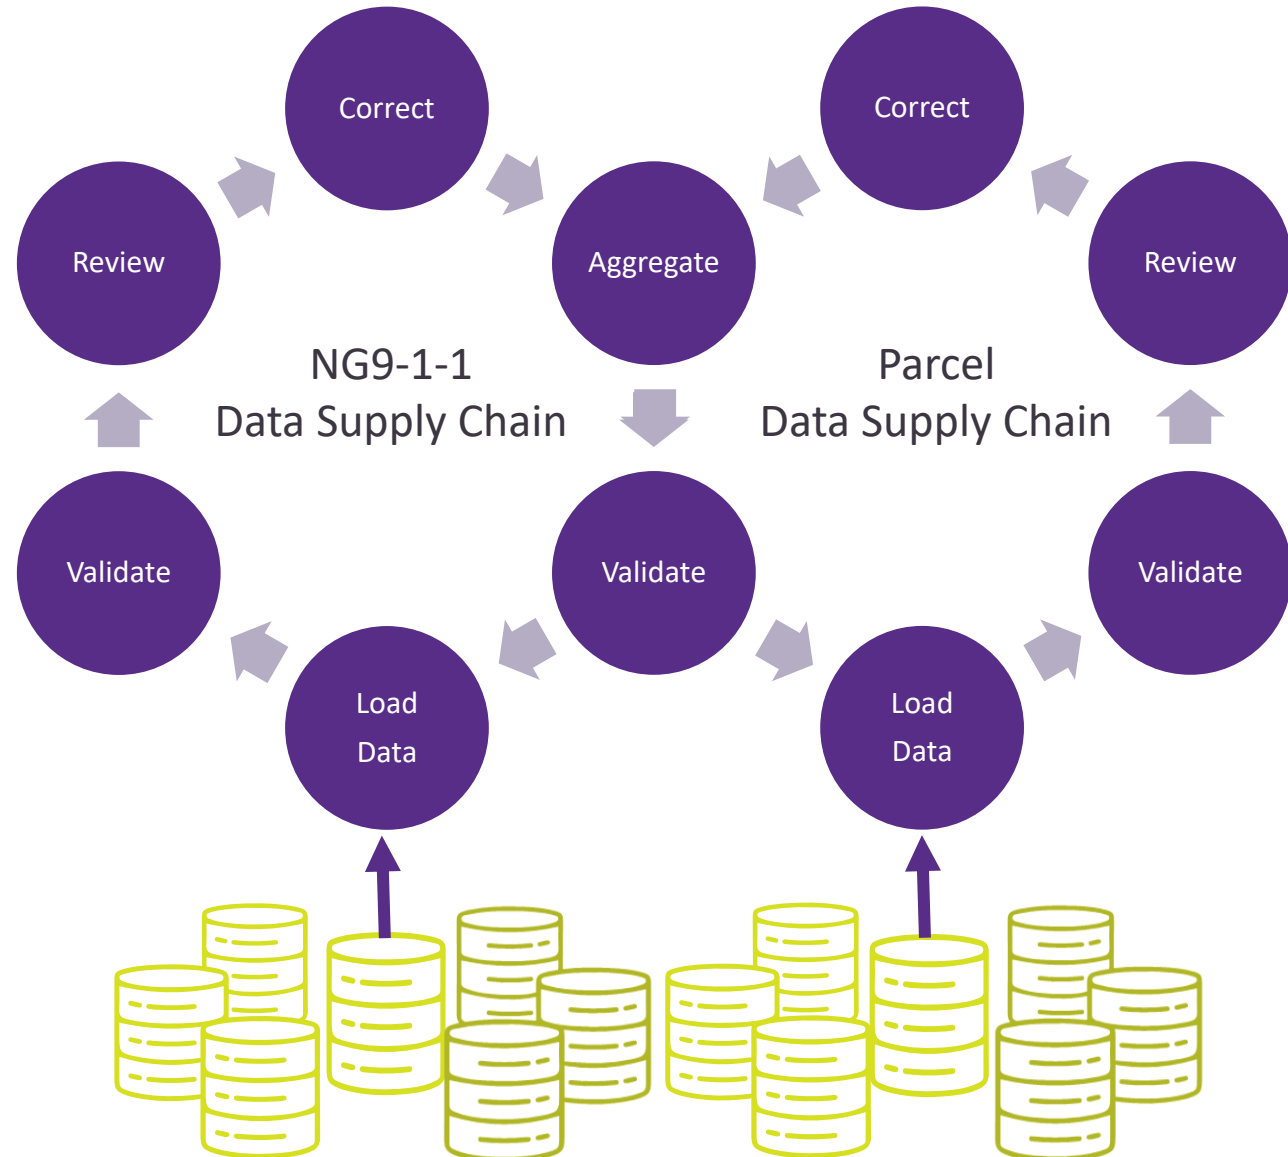

- NG9-1-1 Data Collected from Local Counties, PSAPS, etc.
- Data Must be validated to ensure integrity of spatial data and ensure integrated systems work as expected
- Not Single Threaded (Many Suppliers)
- Geospatial adds complexity because neighbouring jurisdictions
  - Must Re-Validate after aggregation

# Typical Geospatial Data Supply Chain

Adding Parcels adds to the complexity

- Parcels managed by different departments (Assessor Offices)
- Different Update Schedules
- Parcels & Addressing must be cross validated to ensure synchronization

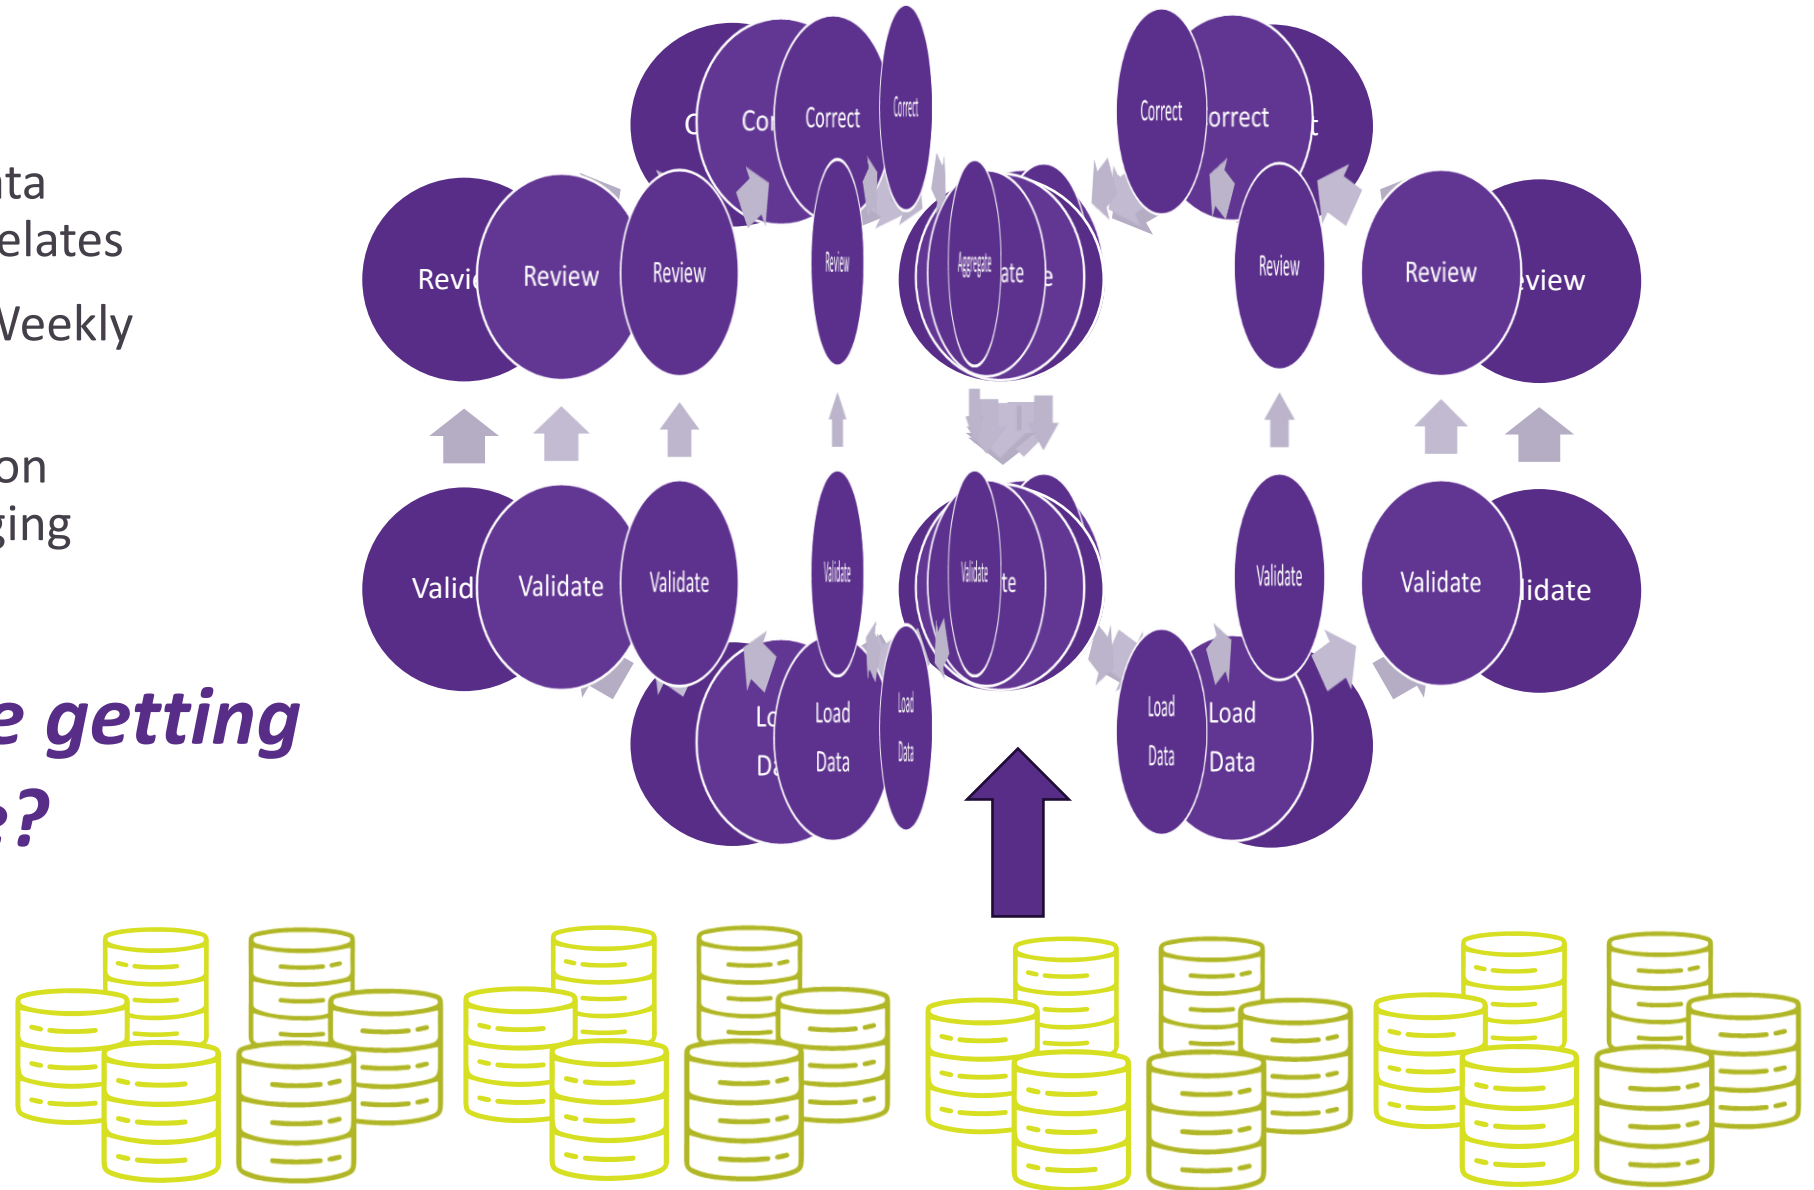

# Typical Data Supply Chain

Adding All Location Department Data to supply chain

- Each Geospatial Data Program spatially relates
- Annual, Monthly, Weekly Update Schedules
- Data Synchronization Extremely Challenging

*Anyone else getting a headache?*

# Data Supply Chain Challenges

## Standards

90%

of GIS specialists time is spent cleaning data before analysis

Infosys BPM

## Project Failure

40%

of projects fail due to difficulty integrating different datasets

BryteFlow.com

## Integrating Diverse Data Formats

72%

of businesses struggle with integrating diverse data formats

Tech Monitor

## Improving Data ROI

10-20%

reduced cost in data ownership and execution time

Mckinsey.com

***On average, businesses lose \$9.7 million yearly because of low-quality data***

Gartner

# Land Parcel Data Management Solution

# Land Parcel Data Management Solution

- Essential Geometry Validations
- Boundary Gap and Overlap Validations
- Parcel Attribute Validation Checks
- CAMA Table Attribute Validation Checks
- Address Point Validation Checks (SSAP to SSAP, NENA)
- Cross Feature (SSAP, Parcel, CAMA)
- Change Detection (Data Integration/Aggregation)
- Statewide Validations (Cross-Jurisdiction Validation Checks)

**Deployed in Arizona and Oregon!**

# County Data Upload Process

Counties upload parcel polygons and real property tables.

Counties match their fields to the Statewide Cadastral Standard scheme.

Attribute Matching	
County Fields	Standardized Fields
A	1
B	2
C	3

Automated data validation and QA/QC processes

Counties review non-conformance results and update data as needed.
