100 GAMMA CONTOUR
500 GAMMA CONTOUR
MAGNETIC LOW

FLIGHT LINE AND DIRECTION

FLIGHT LINE SPACING 3/4 MILES
FLIGHT ALTITUDE NOMINALLY 1000 FEET ABOVE GROUND
REGIONAL MAGNETIC FIELD SHEET CENTER 53,738 GAMMAS
REGIONAL FIELD REMOVED THE FIELD INCREASES
APPROXIMATELY 7.7 GAMMAS/MILE, N 29°E
APPROXIMATE FIELD INCLINATION: +71.3°

SCALE 1:250,000

0 5 10 15 20 25 MILES

GOODNEWS, ALASKA
AEROMAGNETIC SERIES

The magnetic contours shown on this map represent the total anomalous magnetic field of the earth. Variations in this field are caused by the variations in the density or rock type of the earth's crust, depths, and thickness can be used to estimate the apparent location of rocks rich in magnetic minerals. Such rock units may be either at the surface of the ground or buried beneath it. Anomalies show both positive and negative variations depending on the shape, attitude, and composition of local geological features. The depth of an anomaly is indicated by the boundaries or depth of burial of anomalous causing rock units. Some anomalies may be impossible to interpret without further geologic information. Basic profile data is retained at the Division of Geological Survey and should be consulted for detailed analysis.
