4X (1"=100')

EXPLANATION

- Sandstone, conglomerate, and thickly bedded siltstone
 - Shale and thinly bedded siltstone
 - Coal
 - Clay and bentonitic clay
 - Covered
 - Beds
- Correlated by direct tracing on aerial photographs or on ground
- Mapped formational contacts
Based on lithologic differences recognized within individual sections on ground. Does not correspond everywhere with correlations by direct tracing because of facies changes
- Boundaries of transitional zones
Marking upper and lower limit of possible positions of formational contacts

CORRELATED GENERALIZED SECTIONS OF NANUSHUK GROUP ALONG THE KUKPOWRUK RIVER,
UTUKOK-CORWIN REGION, ALASKA
