John Decker and Douglas B. Dickey

October, 1984

Public Data-File Report

PDF 84-50

This report is preliminary and has not been reviewed for conformity with DGGS editorial standards. The authors are solely responsible for its content and will appreciate any comments on the accuracy of the data as well as suggestions to improve the report.

EXPLANATION

This bibliography lists all reports and maps of the Alaska Division of Geological and Geophysical Surveys (and predecessor agencies), U.S. Geological Survey, and U.S. Bureau of Mines, published between 1869 and June 1984, that deal with the geology of southwest Alaska and adjacent offshore regions (fig 1). Also included in the bibliography are most reports on southwest Alaska published by geological journals during the same time period. The references were compiled primarily from published bibliographies by Edward H. Cobb and Crawford E. Fritts (see p. 172 of this report for references). Additional references were obtained from the Index and Bibliography of Geology, from unpublished monthly bibliographies compiled by Ellen R. White (Alaska Technical Data Unit, U.S. Geological Survey), from commercial geological data bases, and from personal files.

This report contains 4 sections: 1) References, 2) Quadrangle Index, 3) Subject Index, and 4) Author Index. The References section consists of a complete bibliographic citation in alphabetical order by first author. The 3 indexes contain abbreviated (author, date and title) one-line references. This abbreviated format is intended to provide as much information as possible about the reference without having to duplicate the entire bibliographic citation under each topic. Hopefully, this will facilitate rapid visual searches of each index. The Quadrangle Index is a complete listing of references sorted by 1:250,000 scale quadrangle (fig.1). It also includes general geological references to southwest Alaska and to offshore areas. The Subject Index is a complete listing of references sorted by general subject matter, with particular emphasis on mineral resources. The Author Index duplicates, in large part, information easily obtained from the References section; both are listings by author. However, the Author Index is a complete alphabetical listing by author regardless of where the author's name occurred in the citation, in the References section, citations are listed alphabetical by the first author only. Approximately 85 percent of the references in the bibliography were indexed by individually reviewing their contents, the remaining 15 percent were unavailable, and were indexed from the title of the report.

All or any part of this bibliography is available on 5 1/4 inch computer diskettes, formatted in either MS-DOS or QNX operating systems. The bibliographic data base used to index the references is called "Golden Retriever", written and distributed by CLASS, San Jose, California. Golden Retriever data files for this bibliography are also available upon request.
