

IV. ARCHAEOLOGICAL OVERVIEW

Ethnohistory

The Seward Peninsula and the project region remained undiscovered by Europeans until the eighteenth century. The principal source of early ethnographic information for the area is Edward William Nelson who made extensive trips throughout the region while employed by the U.S. Army Signal Service at Saint Michael. It was during these trips that Nelson gathered ethnographic collections for the U. S. National Museum and recorded the traditional way of Eskimo culture in western Alaska (Nelson 1983).

Settlements were observed along the coast during both the summer and winter months by Europeans visiting the area. Ivan Kobelev's map of 1779 shows many of these native villages along the coast of the Seward Peninsula (Ray 1975:90; Ray 1983:map). Eskimo villages were located in close proximity to hunting and fishing grounds since the catching of salmon and the hunting of caribou provided major sources of food for the native populations. Summer camps were used for caribou hunting as well as for fishing and berry gathering. Drying racks for meat are frequently mentioned in the early literature. Nets made from sinew were used to catch fish, decoys used for ducks, and caribou were likely hunted with bows, arrows, and spears (Ray 1975:90). Because small marine mammals were hunted during the winter season, winter villages were typically located on the coast. Winter subsistence also included fishing through ice holes for tomcod and crabs, and the snaring of small animals.

Summer houses, observed by Nelson on a low, sandy coast near Cape Nome, were described as conical lodges made from standing poles of driftwood placed in a small circle with the tops of the poles leaning together much like a tepee. These small houses were reportedly used during the summer months while fishing for salmon and snaring marmots. Winter homes at a village near Cape Nome were constructed from driftwood and sod. These semisubterranean winter homes consisted of a living area and storage room connected by a small passage way. Entrance to the house was through a hole in the roof of the storage room (Nelson 1983:253-254).

Native clothing was made mostly from sealskin, caribou, and ground squirrel. Coats of gutskin were worn to protect against dampness. For transportation, kayaks and umiaks were used during the summer season while sleds were utilized during the winter months. Trading appears to have been minimal until the influx of whalers and traders in the 1850s (Ray 1983:64).
