

# Progress on Developing a Cook Inlet Mesozoic Subcrop Map

Laura Gregersen  
&  
Diane Shellenbaum

Alaska Department of Natural  
Resources, Division of Oil and Gas

USGS Technical Meeting, September 22, 2010

## Author(s) and affiliations:

Laura Gregersen and Diane Shellenbaum  
Alaska Division of Oil and Gas

## Date presented:

September 22, 2010

## Presentation Forum:

U. S. Geological Survey Cook Inlet Geology Review  
BP Energy Center, Anchorage, Alaska

## Acknowledgments of any external funding sources and in-kind contributors:

The authors gratefully acknowledge CGGVeritas for allowing the use of their proprietary speculative 2D Marine dataset in this study.

In addition, this intermediate progress report has benefited from collaboration with:  
Robert Swenson, David LePain, Marwan Wartes, and Robert Gillis

Alaska Division of Geological & Geophysical Surveys (ADGGS)

Paul Decker

Alaska Division of Oil and Gas (ADOG)

Dan Seamount and Art Saltmarsh

Alaska Oil and Gas Conservation Commission (AOGCC)

Rick Stanley

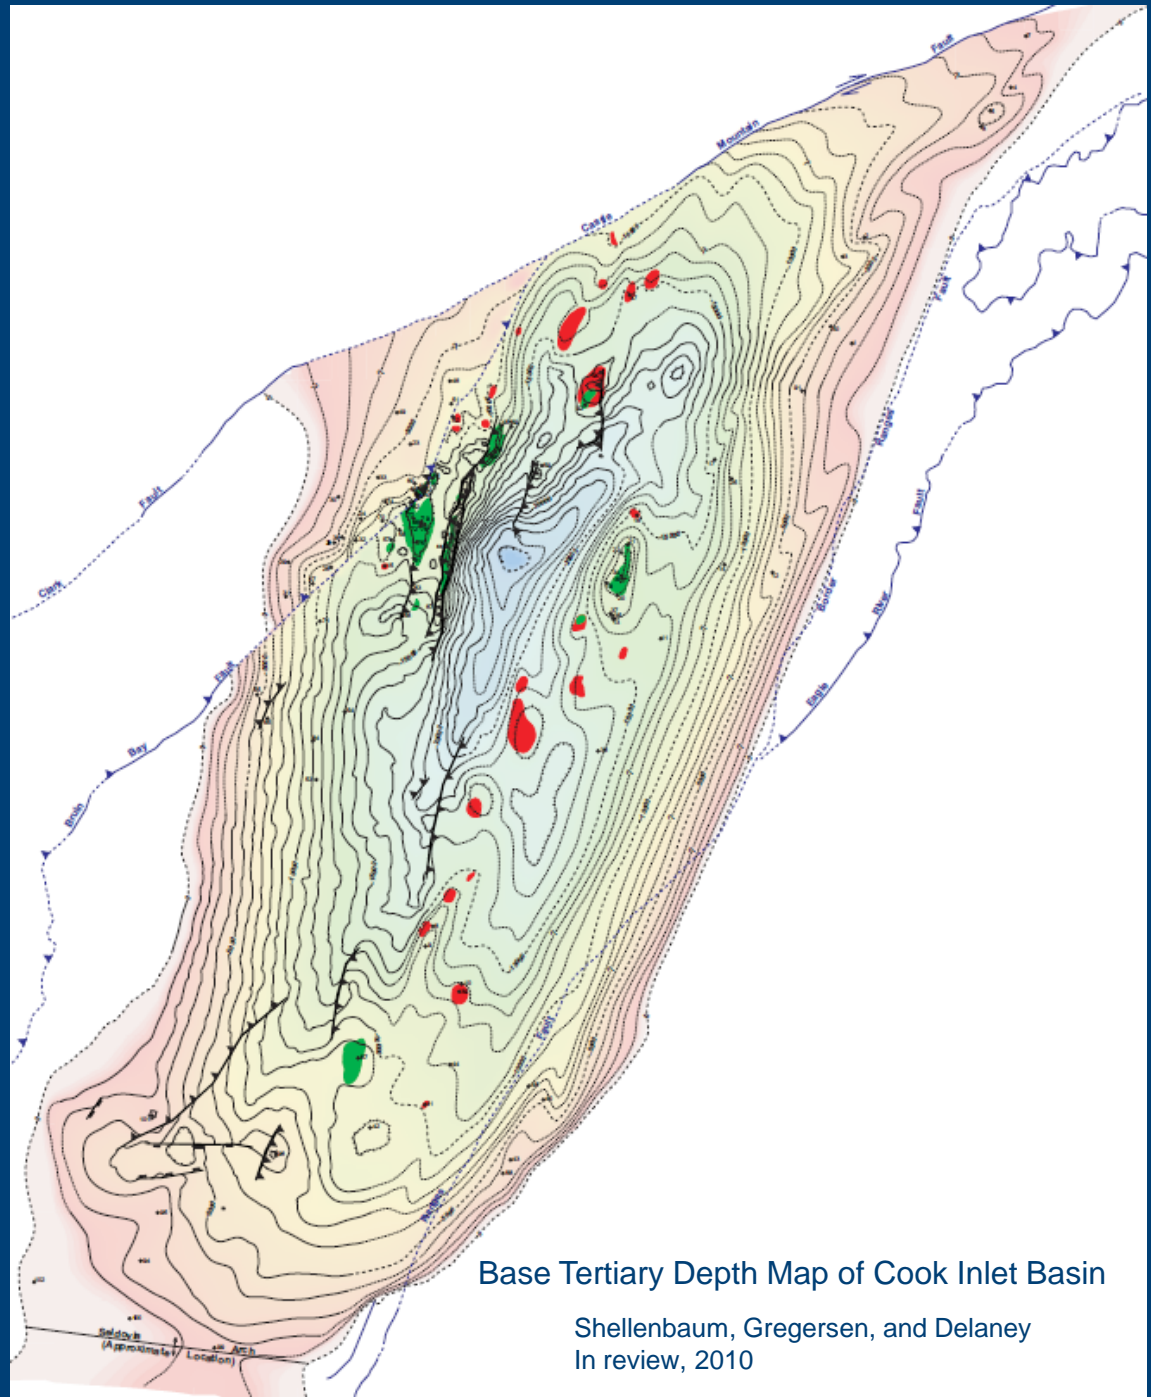

U.S. Geological Survey (USGS)

# Goal: Present our current thoughts and receive feedback!

1. Data incorporated into Base Tertiary and Mesozoic Subcrop Maps
2. Rock Descriptions of Mesozoic Section
3. Existing Subcrop Maps
4. Cross Sections
5. DNR's Preliminary Subcrop Map(s) & Supporting Evidence
6. Seismic Analysis and Impact on Subcrop Interpretation

## Base Tertiary Depth Map:

- Reviewed all wells that penetrated base Tertiary --102 wells had confident base Tertiary pick
- Seismic interpretation of CGGVeritas data set - marine only
- Magoon and others -fold axes, Castle Mtn-Lake Clark, Bruin Bay, Border Ranges faults.
- AOGCC field structure maps

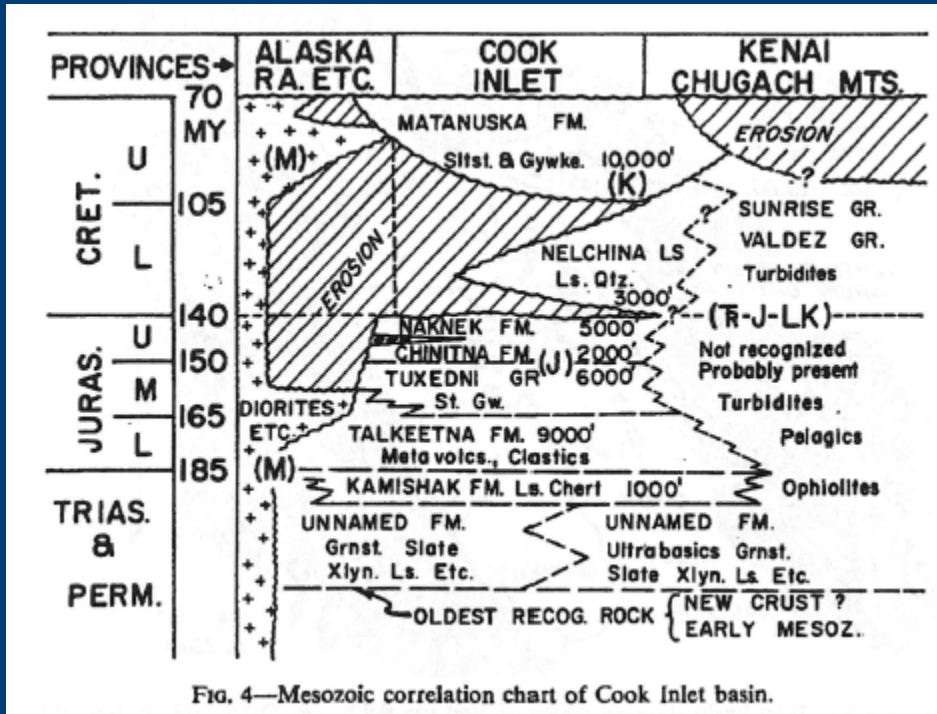

Base Tertiary Depth Map of Cook Inlet Basin

Shellenbaum, Gregersen, and Delaney  
In review, 2010

## Data Incorporated into Mesozoic Subcrop Map:

1. Lithologic descriptions from drill cuttings and core chips (AMSTRAT)
2. Rock descriptions from measured sections and published maps (i.e. DGGs & USGS)
3. Age calls and cross sections from published CI literature (i.e. Boss et al., 1976; Magoon et al., 1981; Kirshner & Lyon, 1973; Fisher & Magoon, 1978; AGS (1969,1970, 1985))
4. Public talks (i.e. Seamount)
5. Well log correlations in the Mesozoic
6. Age calls from Zippi CI Biostratigraphy Study (EJ, MJ, LJ, LK)
7. Seismic interpretation of CGGVeritas marine dataset over CI

# Goal: Present our initial thoughts and receive feedback!

1. Data incorporated into Base Tertiary and Mesozoic Subcrop Maps
2. Oil Production and Tests in the Jurassic Formation
3. Rock Descriptions of Mesozoic Section
4. Existing Subcrop Maps
5. DNR's Preliminary Subcrop Map(s) & Supporting Evidence
6. Seismic interpretation of CGGVeritas dataset (CI88 and CI89) and 1975 ALC prefix public data available from the USGS website
7. Preliminary seismic analysis

# Mesozoic Seismic

- Background
  - Control – Seismic, well, outcrop
  - Basis for Interpretation – Data quality
- Lower Cook Inlet
  - Seismic walk through
- Upper Cook Inlet
  - Seismic walk through
  - Isopachs, analysis
- Upper and Lower Cook Inlet
  - Isopachs, analysis

# Marine Seismic Control

- CGGVeritas Spec 2D Marine '88-'89
- USGS public ALC marine, '75
- Synthetic ties – LCI OCS wells
- Formation Tops projected onto seismic
- Check Shots
- Extrapolate from surface geology
- Paly picks

# CI-88, CI-89 2D Marine Spec

# Cook Inlet Strat Column

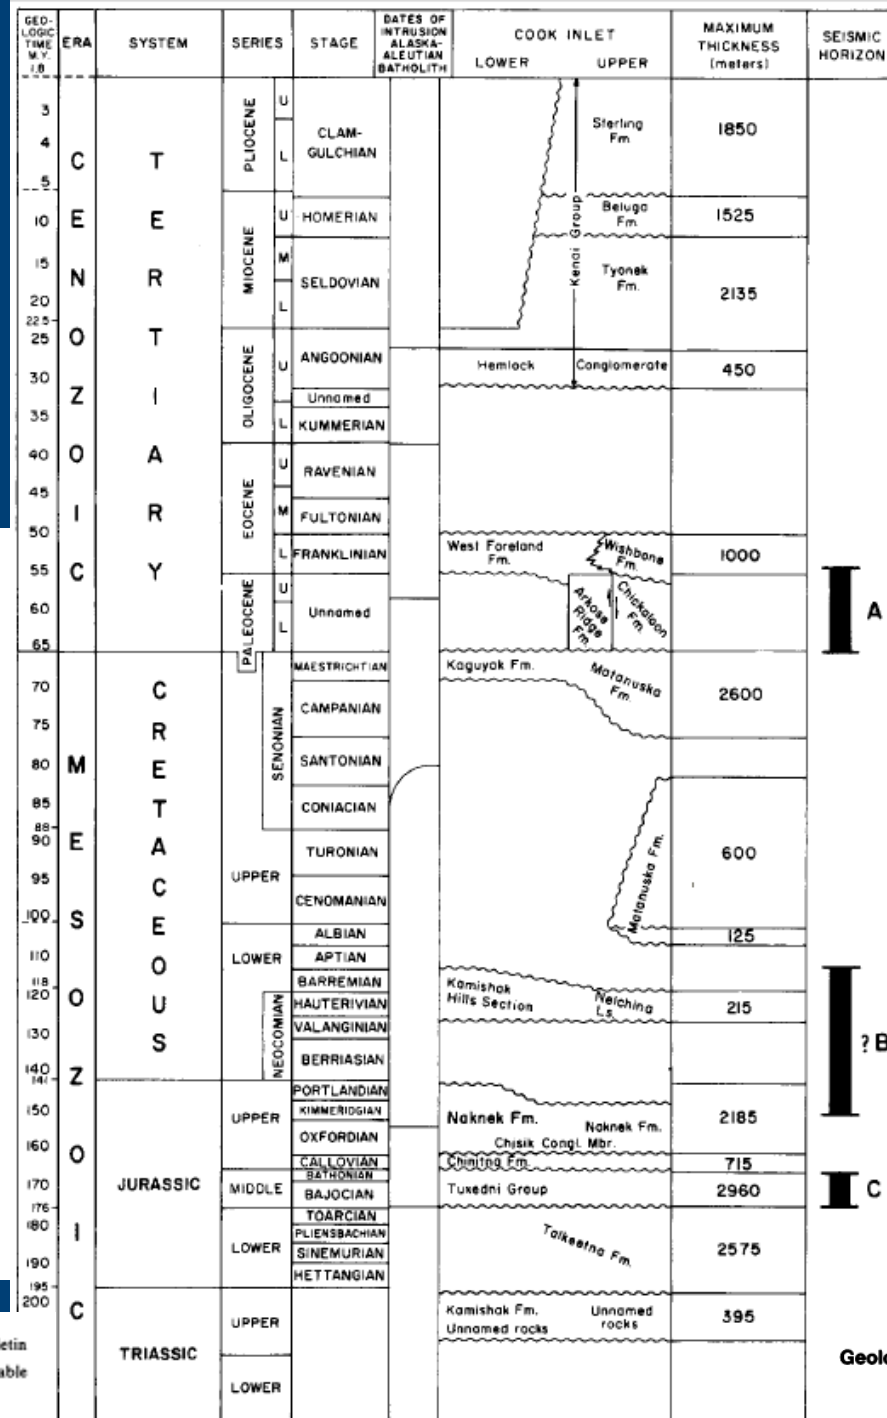

Age (Ma)	Era	Period	Epoch	Stratigraphy	Source/Prod	Depositional Environment	Tectonism	
0	Cenozoic	Tertiary	Pliocene	Sterling	S *	Fluvial, lacustrine, coal swamp, alluvial fan	Onset of magmatism (ancestral to modern arc)	
20			Miocene	Beluga	S *			Yakutak collision
30			Oligocene	Tyonek	S *			
40			Eocene	Hemlock	● ●			Accretionary complex above sea level
55			West Foreland	● ●				
60			Paleocene	Unnamed				Kula-Pacific ridge subduction
75	Mesozoic	Cretaceous	Late	Saddle Mtn Mbr	Shallow marine Deep-water turbidites	Bruin Bay fault active		
85			Kaguyak	Exhumation of arc roots				
100			Matanuska				WCT docks	
120		Early	Herendeen/ Nelchina	Shallow marine mixed carbonates and siliciclastics	Growth of accretionary prism			
140		Neocomian	Staniukovich					
160		Jurassic	Late	Naknek	Marine to nonmarine siliciclastics	Exhumation of shallow arc		
175	Middle		Chinitna					
185	Tuxedni		S					
200	Triassic	Early	Talkeetna	Andesitic flows, volcanoclastics	BRF initiated as subduction-related thrust?			
220		Late	Kamishak			S		
240		Middle						
240	Early							

Redrawn from Curry and others (1993) and Swenson (2003); additional information from Little and Naesser (1989), Plafker and others (1989), and Nokleberg and others (1994)

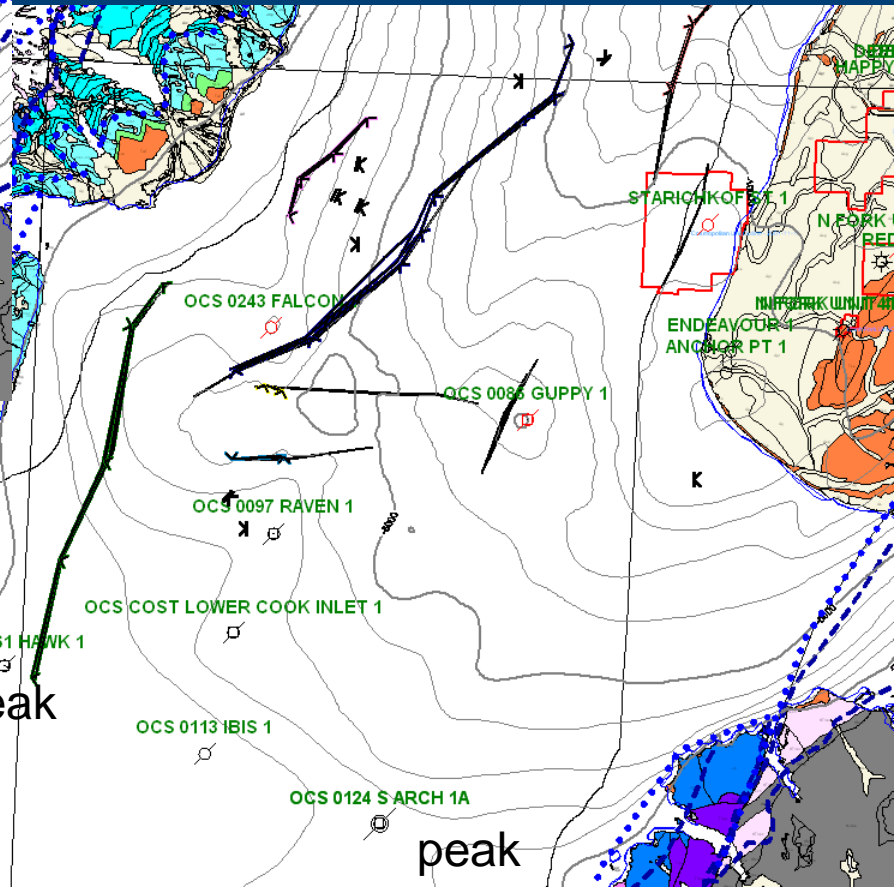

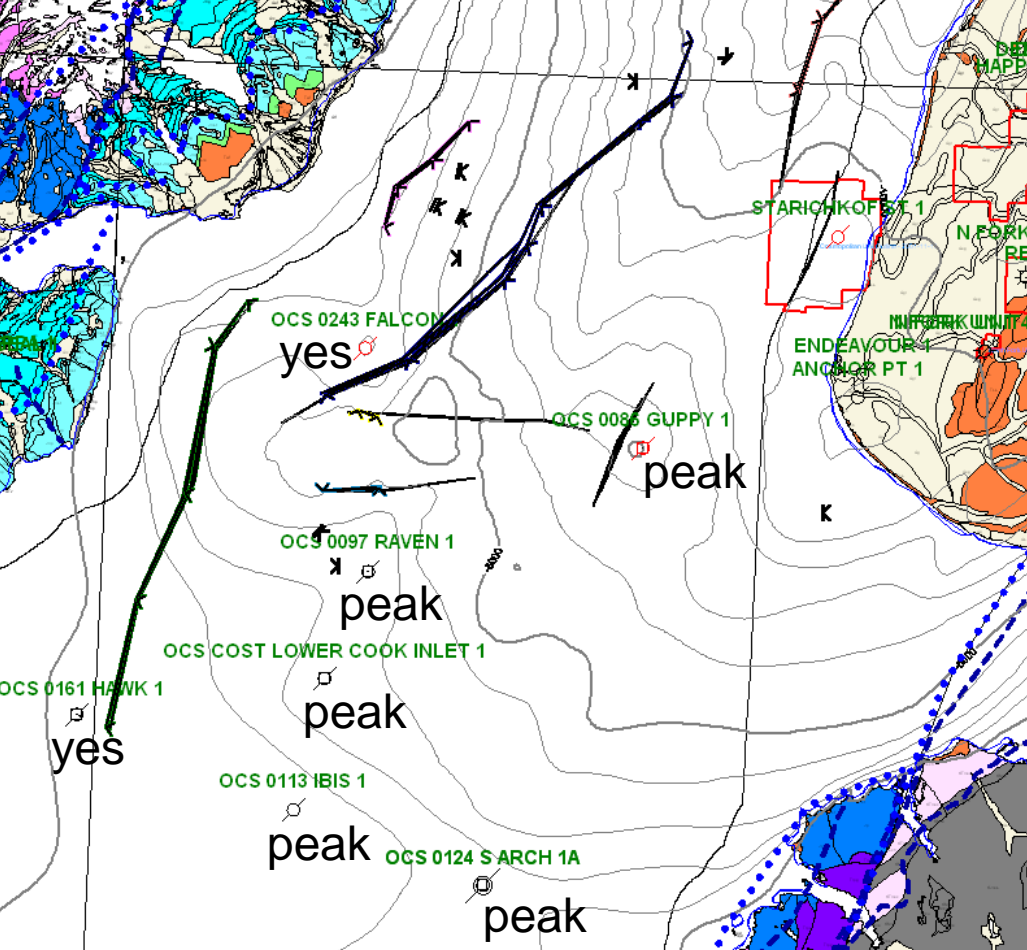

# Fisher and Magoon, 1978

# LCI Geologic Framework

Geologic Framework of Lower Cook Inlet, Alaska'

Naknek Synthetic  
expression, reverse  
polarity

Talkeetna Synthetic  
expression, reverse  
polarity

# Cook Inlet Strat Column

OCS Synthetics  
(reverse polarity)

Herendeen –sometimes  
a peak, often nothing  
much

Naknek –  
usually a nice peak

Tuxedni-  
Nothing anomalous

Talkeetna-  
Often nice peak at  
bottom of high energy  
section

Redrawn from Curry and others (1993) and Swenson (2003); additional information from Little and Naesser (1989), Plafker and others (1989), and Nokleberg and others (1994)

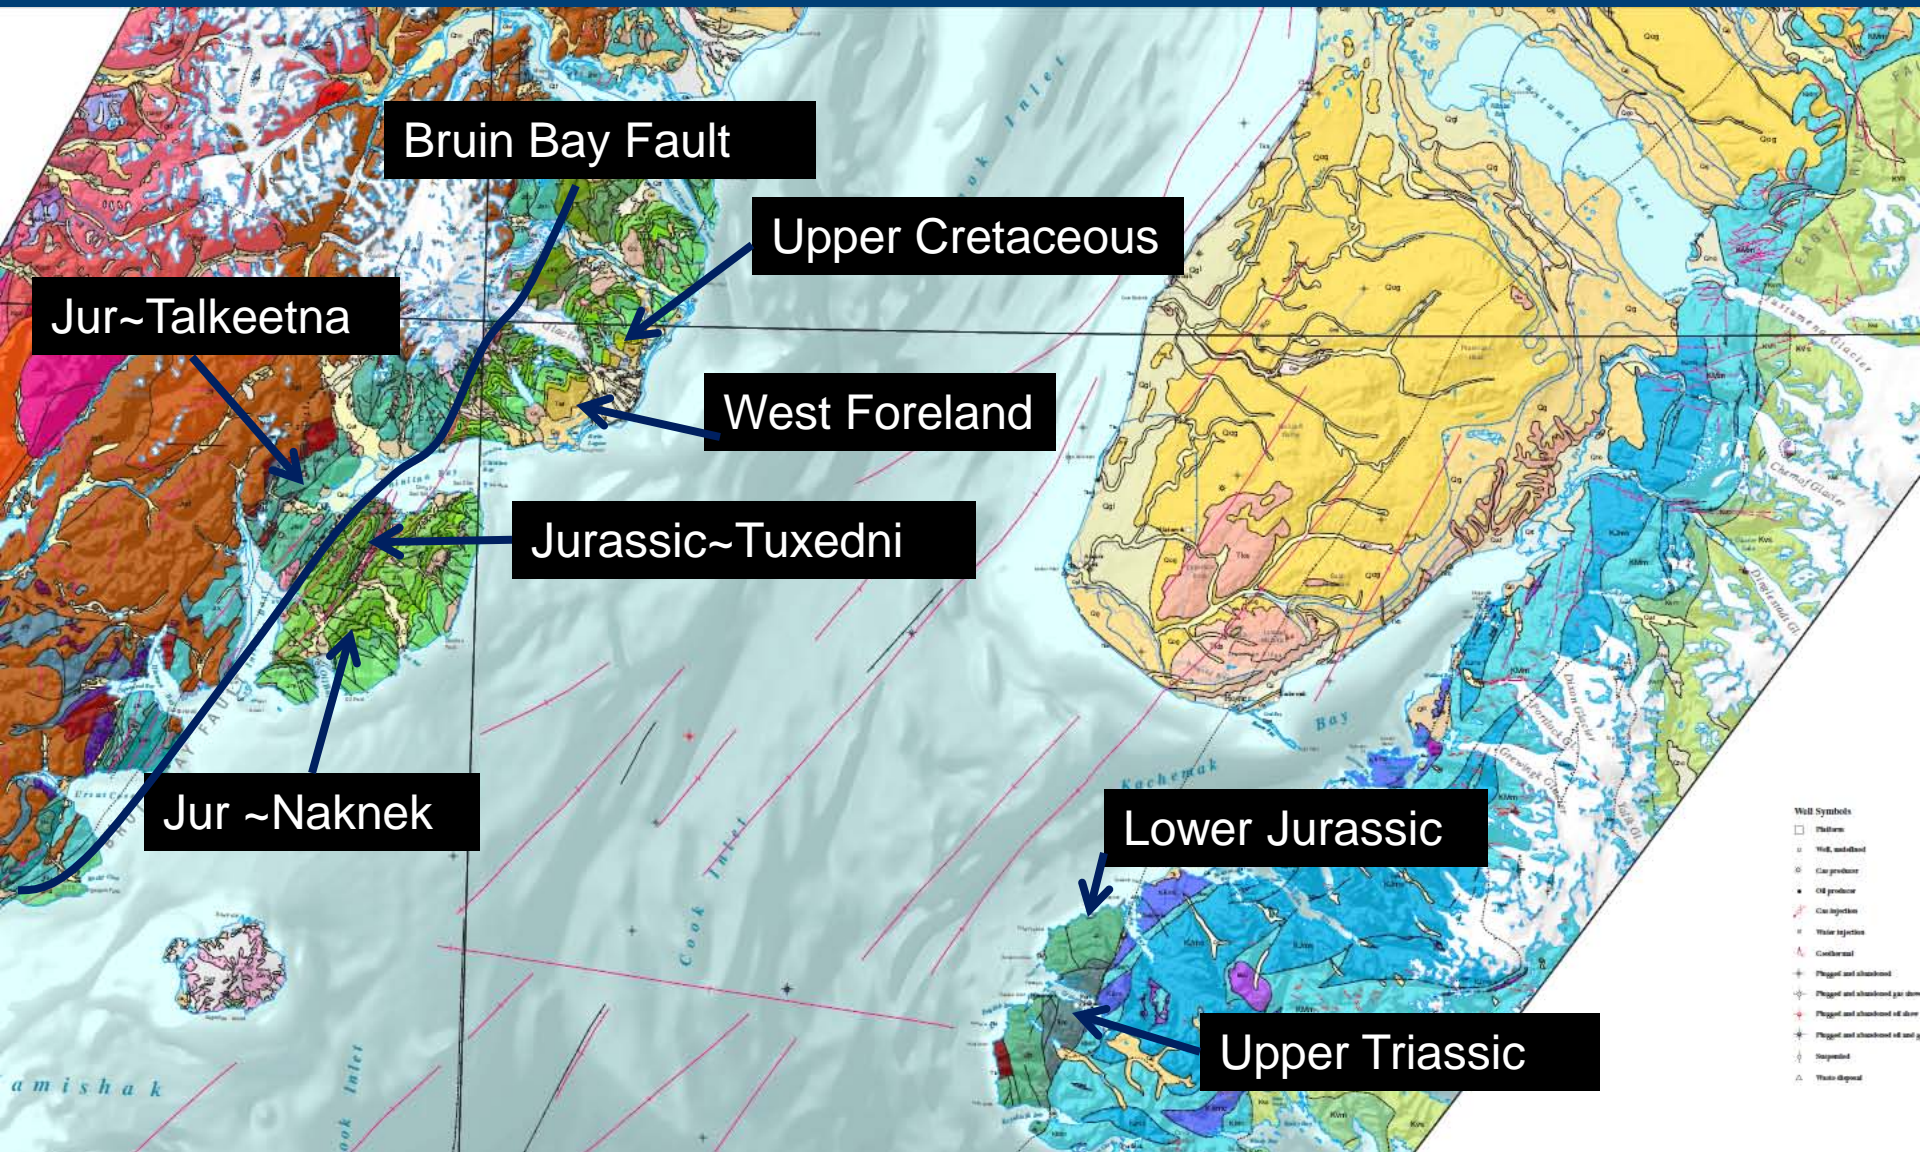

# Seismic Data quality in Mesozoic

- Variable in Upper and Lower Cook Inlet
- Most reliable at Naknek and Talkeetna (Upper and Lower Jurassic)
- Often picking “texture”
- Goal is internally consistent set of picks honoring all well control points
- Confidence higher in patterns than in exact picks

# Horizon Control

- Lower Cook Inlet
  - OCS wells
  - Projection to outcrop
- Mid Cook
  - Wells defined subcrop limits – (inc.Paly)
  - Seismic character and fabric
- Upper Cook Inlet
  - Well picks where definitive
  - Wells defined subcrop limits from paly
  - Seismic character and fabric

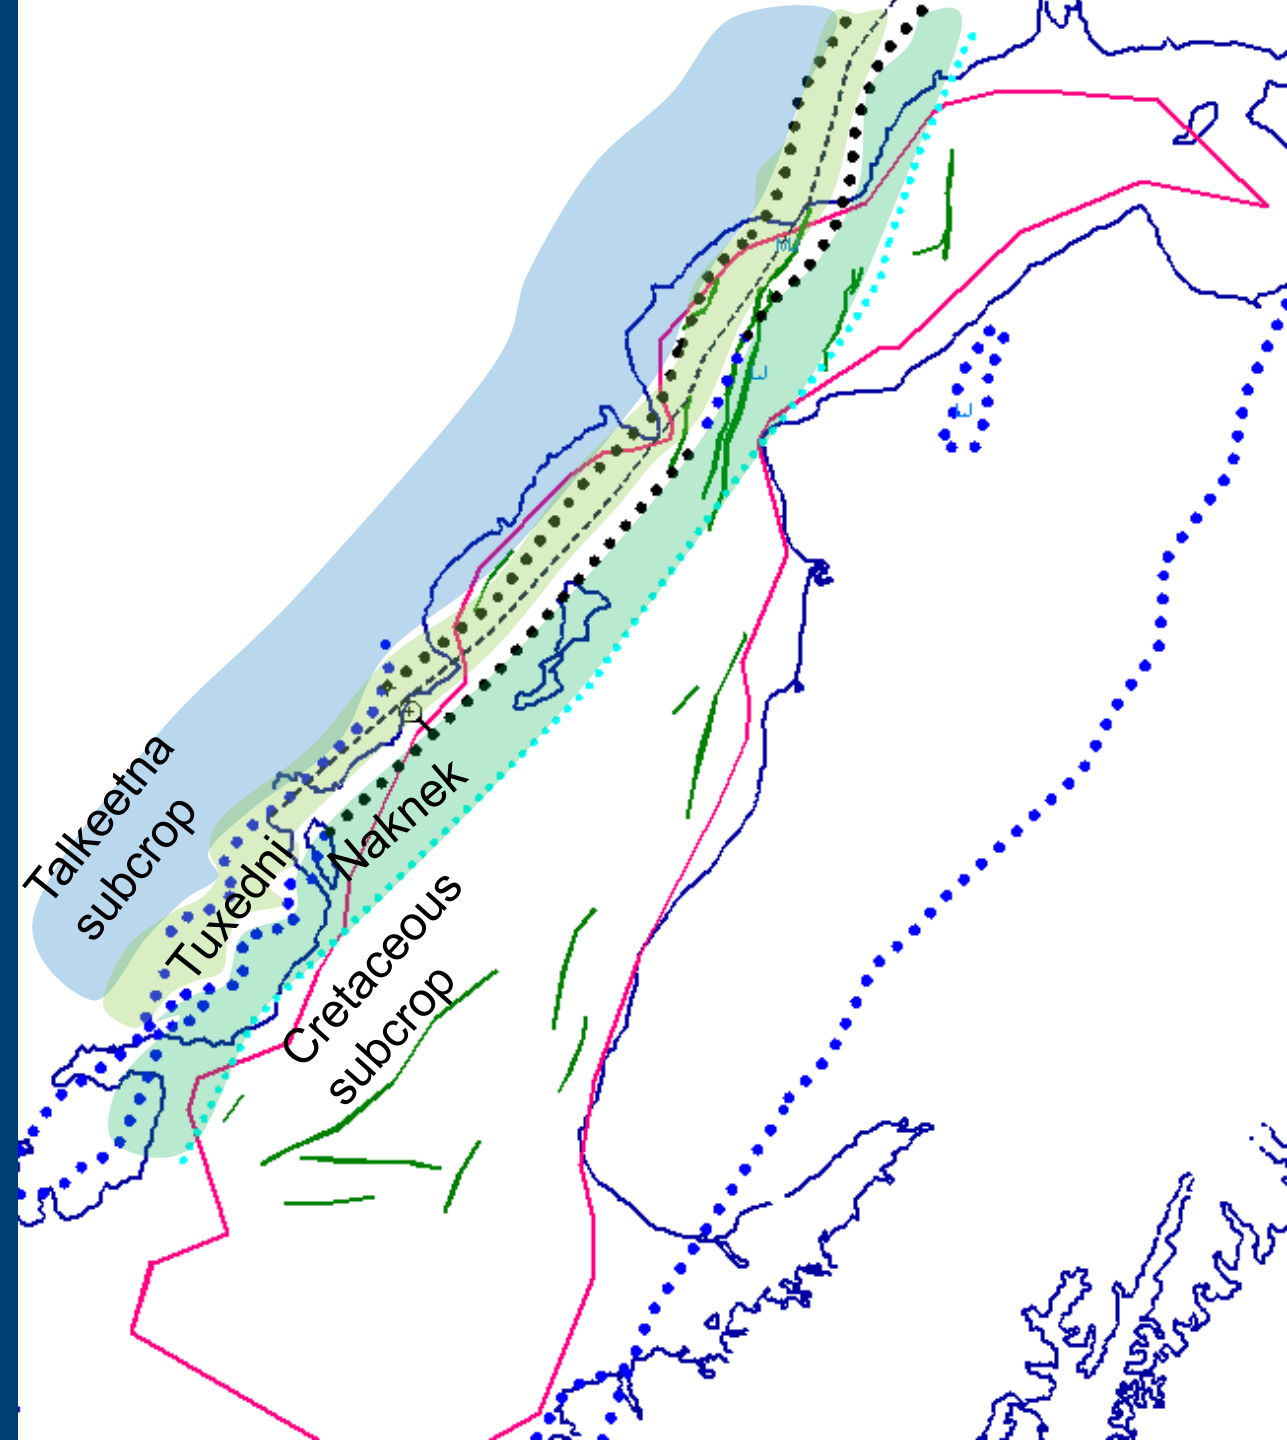

Wilson, et.al. 2009, Preliminary Geologic map of the Cook Inlet Region, Alaska

~2500 ft  
~750 ft  
0 ft

# Cook Inlet Mesozoic Subcrop Summary

- First pass interpretation of well and seismic data completed.
  - Significant additional work planned.
- In spite of challenging data quality, seismic interpretation is providing insights into subcrop pattern shapes and position.
- Subcrop patterns have evolved through integration of well and seismic data.
- Jurassic subcrops interpreted on seismic could simplify oil migration pathways

# Mesozoic Subcrop Map – Next steps

- Seismic
  - Polish interpretations for Tuxedni and Talkeetna
  - Study implications of patterns seen in Mesozoic isopachs
  - Create Naknek and Tuxedni isopachs for whole Inlet to improve understanding of paleostructures
- Wells
  - Look at cuttings for all wells
  - Look at all available core data
- Continue collaboration with DGGS and USGS
- Solicit Feedback

A photograph of a rugged, dark mountain range with patches of snow and a blue sky with clouds. The mountains are dark grey or black, with horizontal rock layers visible. Patches of snow are scattered across the slopes and in the valleys. The sky is blue with white clouds. The foreground is a dark, rocky slope with some sparse vegetation.

Thank You
