REPORTED DISTRIBUTION OF TOTAL LEAD IN WATER FROM WELLS AND DISTRIBUTION SYSTEMS, STERLING, ALASKA

by

J.A. Mutter and J.A. Maurer
1984

REPORT OF INVESTIGATIONS 84-9
MUNGER AND MAURER (1984), SHEET 4 OF 6

EXPLANATION

- Total lead concentration less than action level, 0.015 mg/L, or nondetectable
- Total lead concentration of single analysis greater than action level, 0.015 mg/L
- Total lead concentration of multiple analyses greater than action level, 0.015 mg/L
- Domestic well
- Public supply well

Notes:

1. Lead action level constitutes the national primary drinking water regulation (HOCOMAX80).
2. See discussion (p. 6) of possible distribution-system influences on lead concentrations
