This map has been constructed using the best information available and is believed to be accurate; however, its preparation required many assumptions. Actual conditions during a tsunami may vary from those assumed, and the accuracy cannot be guaranteed. Areas outlined in yellow or specific of the earthquakes, any earthquake-generated tsunamis, coastal construction, tide level, local coastal conditions, and may differ from the areas shown on the map. Information on this map is intended to permit state and local agencies to plan emergency evacuation and localize potential unrest. The map is not warranted for design-specific use or for land use regulation. Determination of the tsunami inundation maps by qualified experts is strongly recommended.
