**UNITED STATES DEPARTMENT OF THE INTERIOR
Cecil D. Andrus, Secretary
BUREAU OF MINES**

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. administration.

FUELS AND ENERGY DATA: UNITED STATES BY STATES AND CENSUS DIVISIONS, 1974

by

Lulie H. Crump¹

ABSTRACT

Salient information on reserves, production, and consumption of fuels and energy by State is summarized in this Bureau of Mines publication. Reserve and production data are shown for each of the fossil fuels (coal, crude oil, natural gas liquids, and natural gas) and for uranium. The consumption data of each of the major consuming sectors (household-commercial, industrial, transportation, electric power, and miscellaneous) are broken down by energy source (coal, petroleum, natural gas, hydropower, and nuclear). In addition, total energy consumption in the Nation in 1974 is compared with consumption in 1973 and 1975 (preliminary data).

INTRODUCTION

An important function of the Bureau of Mines is the collection of data on the production and consumption of fossil fuels. These data are generally published in separate reports for each fuel. By consolidating data from these reports and pertinent information from other sources, this report provides an overview of the fuel-energy position of each State in 1974. To provide larger geographic viewpoints, the State data are combined for the nine census divisions of the Nation. The individual State and division tables can be used as the basis of more extensive fuel-energy studies. Data for the United States are also included, thereby giving a national perspective to the fuel-energy position of a particular State or division. Six additional tables and eight illustrations are included following the U.S. summary statistics to portray some of the more salient facts, and an appendix provides information on petroleum consumption.

Continuing an annual series, this report follows "Fuels and Energy Data: United States by States and Regions, 1973" which was published in 1976 as Information Circular 8722. Revised consumption data for the years 1960 through 1972 have been published in Information Circular 8704, "Historical Fuels and Energy Consumption Data, 1960-72, United States by States and Census Districts East of the Mississippi," and Information Circular 8705,

¹Mineral specialist, Division of Interfuels Studies, Bureau of Mines, Washington, D.C.

"Historical Fuels and Energy Consumption Data, 1960-72, United States by States and Census Districts West of the Mississippi."

It should be noted that the estimates of total U.S. consumption calculated by summing the data for the individual States differ from the figures compiled for the Nation as a whole. These differences are generally due to lack of information on the distribution of certain fuels or to confidentiality of fuel shipments data. The differences are enumerated in table 5.

Some data are withheld or combined to prevent disclosing individual company confidential information. Data that are combined for several States are listed in the State that accounts for the largest share. The factors used to convert physical quantities to British thermal units (Btu's) are shown under "Btu Conversion." The data may not add to the totals owing to rounding.

Computer tapes incorporating consumption data for 1960 through 1974 can be obtained for \$250 from the Division of Finance, Bureau of Mines, Building 20, Federal Center, Denver, Colo. 80225. The tapes are 9-track, 800BPI, odd parity, EBCDIC. Orders should specify the 1960-74 Energy Consumption Data tapes, and checks should be payable to the Bureau of Mines.

ACKNOWLEDGMENTS

This report was prepared under the general direction of Walter G. Dupree, Jr., Chief of the Division of Interfuels Studies, and T. Reed Scollon, Assistant Director--Fuels, Bureau of Mines.

Assistance in preparing this publication was given by the following Bureau employees: Terry J. Sutton, computer systems analyst, Fuels Availability System, Division of Fuels Data; Donald J. Donaven, supervisory physical scientist; C. Kenneth Boyd and Ralph Johnson, computer programmers, Division of Automatic Data Processing; and Charles L. Readling, mineral specialist, Division of Interfuels Studies.

DEFINITIONS AND ABBREVIATIONS

bb1--Barrels (42 gallons per barrel).

Btu--British thermal units. The amount of heat necessary to raise the temperature of 1 pound of water 1° F at or near 39.2° F. It is a convenient measure by which to compare the energy of various fuels.

Coal mines, number of--Number of bituminous coal and lignite mines.

Consumption--Many of the quantities listed were reported as shipments or sales and may not reflect the actual consumption.

Anthracite consumption cannot be shown by consuming sector within States, so it is included in the miscellaneous sector. The principal consuming sectors are electric power and household-commercial. For some States this figure cannot be revealed and is therefore omitted.

"Petroleum products" include the following: Motor gasoline, jet fuel, kerosine, distillate and residual fuel oil, liquified petroleum gas, and asphalt (including road oil). Other products are included in table 5.

For bituminous coal, kerosine, distillate fuel oil, residual fuel oil, liquefied petroleum gases, and natural gas, the various categories shown in the Mineral Industry Surveys are combined to form the major consuming sectors as follows:

Bituminous coal: Household-commercial--"Retail dealers"; Industrial--"Coke and gas plants" and "All others"; Electric power--"Electric utilities." Bituminous coal consumption in the industrial sector includes any coal used for transportation.

Kerosine: Household-commercial--"Heating"; Industrial--"All other uses."

Distillate fuel oil: Household-commercial--"Total: Heating Oils"; Industrial--"Industrial use," "Oil company use," and "Diesel type, Off highway"; Transportation--"Railroad use," "Vessel Bunkering use," "Military use," and "Diesel type, On highway"; Electric power--"Electric utility company use"; Miscellaneous--"Miscellaneous Uses: Other uses."

Residual fuel oil: Household-commercial--"Total: Heating Oils"; Industrial--"Industrial use" and "Oil company use"; Transportation--"Railroad use," "Vessel Bunkering use," and "Military use"; Electric power--"Electric utility company use"; Miscellaneous--"Miscellaneous uses."

Liquefied petroleum gases: Household-commercial--"Residential and commercial"; Industrial--"Industrial" and "Utility gas"; Transportation--"Internal-combustion engine fuel"; Miscellaneous--"Miscellaneous uses."

Natural gas: Household-commercial--"Residential," "Commercial," and "Other consumers"; Industrial--"Industrial," "Lease and plant fuel," and "Transmission loss and unaccounted for"; Transportation--"Pipeline fuel."

Energy inputs--"Total gross consumption" is the total energy input into the economy. It includes coal, petroleum, natural gas, and the equivalent energy inputs of the electricity generated by hydroelectric and nuclear power-plants. "Total net consumption" is the total energy input into the three final consuming sectors. It consists of directly consumed fuels and of utility electricity distributed (note definition below).

kW-hr--Kilowatt-hour. The amount of energy equal to 1 kilowatt for 1 hour. It is equivalent to 3,412 Btu.

Labor force: Fuel sector (excluding processing)--Excludes uranium labor force.

MMcf--Million cubic feet.

Net generation--Gross generation less kilowatt-hours consumed out of gross generation for station use.

Reserves:

Coal--The reserve figures reported are the demonstrated reserve base as of January 1, 1974, and include measured and indicated in-place quantities of bituminous coal and anthracite in beds 28 inches or more thick and subbituminous coal in beds 60 inches or more thick that occur at depths to 1,000 feet. Also included are small quantities of coal in beds thinner and/or deeper that presently are being mined or for which there is evidence that they could be mined commercially at this time. The data for lignite include beds 60 inches or more thick that can be surface-mined; they generally occur at depths no greater than 120 feet. In general, the amount of coal that can be recovered from a deposit ranges from 50 to 90 percent of a reserve base, depending upon the location and geologic occurrence of the coalbed. Reserves for some States are currently being revised; each reserve that is being revised is indicated by a footnote.

Crude oil, natural gas, and natural gas liquids--The data are proved reserves as of yearend 1974 as reported by the American Petroleum Institute and American Gas Association. "Proved reserves" are reserves that can be recovered with reasonable certainty from known reservoirs under existing economic and operating conditions. They do not include petroleum in unproved portions of partly developed fields.

Uranium--The reserve data are as of yearend 1974 and are based on a cost of \$15 per pound of recoverable U_3O_8 (uranium oxide) as reported by the U.S. Energy Research and Development Administration.

Trillion--Million million: 10^{12} .

Utility electricity distributed--The electricity generated by power-plants and transmitted to the household-commercial, industrial, and transportation sectors was distributed on the basis of sales of electricity as reported by the Edison Electric Institute. The data were adjusted to the level of the total net generation and net imports of utility electricity in the United States. In this way transmission losses have been allocated to the final consuming sector.

U_3O_8 (uranium oxide)--The international standard for the form in which uranium concentrate is marketed.

BTU CONVERSIONS

Production

Anthracite--25,400,000 Btu/short ton.

Bituminous coal and lignite--The Btu value of bituminous coal and lignite is the median value of analyses by the Bureau of Mines of samples of coal delivered to Government installations from a producing State and samples obtained at mines and preparation plants during the years 1960-72. The following tabulation shows individual values used in each State:

<u>State</u>	<u>Btu/short ton</u>
Alabama.....	25,740,000
Alaska.....	22,860,000
Arizona.....	21,840,000
Arkansas.....	25,460,000
Colorado.....	22,320,000
Illinois.....	22,780,000
Indiana.....	23,200,000
Iowa.....	19,420,000
Kansas.....	24,340,000
Kentucky.....	25,460,000
Maryland.....	25,440,000
Missouri.....	21,800,000
Montana.....	21,580,000
New Mexico.....	23,080,000
North Dakota.....	14,280,000
Ohio.....	24,600,000
Oklahoma.....	25,240,000
Pennsylvania.....	26,720,000
Tennessee.....	26,200,000
Texas.....	13,200,000
Utah.....	25,440,000
Virginia.....	26,360,000
Washington.....	19,340,000
West Virginia.....	26,800,000
Wyoming.....	20,620,000

Crude oil--5,800,000 Btu/barrel.

Natural gas liquids--4,024,000 Btu/barrel.

Natural gas (wet)--1,097 Btu/cubic foot. This includes the Btu value of the natural gas liquids contained in the gas.

Uranium--215,000,000 Btu/pound of U_3O_8 .

Thorium--No value assigned.

Consumption

Anthracite--25,400,000 Btu/short ton was used for all consuming States.

Bituminous coal and lignite--Btu conversion of household-commercial and industrial sectors was based on the average Btu value attributed to the State that was the major supplier of coal delivered. The following tabulation shows individual values used in each State:

<u>State</u>	<u>Btu/short ton</u>
Alabama.....	25,740,000
Alaska.....	22,860,000
Arizona.....	21,840,000
Arkansas.....	25,460,000
California.....	25,440,000
Colorado.....	22,320,000
Connecticut.....	26,720,000
Delaware.....	26,720,000
District of Columbia.....	26,800,000
Florida.....	25,460,000
Georgia.....	25,460,000
Idaho.....	21,580,000
Illinois.....	22,780,000
Indiana.....	23,200,000
Iowa.....	22,780,000
Kansas.....	24,340,000
Kentucky.....	25,460,000
Louisiana.....	-
Maine.....	26,800,000
Maryland.....	26,800,000
Massachusetts.....	26,800,000
Michigan.....	24,600,000
Minnesota.....	21,580,000
Mississippi.....	25,740,000
Missouri.....	22,780,000
Montana.....	21,580,000
Nebraska.....	24,340,000
Nevada.....	21,840,000
New Hampshire.....	26,800,000
New Jersey.....	26,720,000
New Mexico.....	23,080,000
New York.....	26,720,000
North Carolina.....	25,460,000
North Dakota.....	14,160,000
Ohio.....	24,600,000
Oklahoma.....	25,240,000
Oregon.....	25,440,000
Pennsylvania.....	26,720,000
Rhode Island.....	26,800,000
South Carolina.....	25,460,000
South Dakota.....	14,280,000
Tennessee.....	25,460,000
Texas.....	13,200,000
Utah.....	25,440,000
Vermont.....	26,800,000
Virginia.....	26,360,000
Washington.....	19,340,000
West Virginia.....	26,800,000
Wisconsin.....	22,780,000
Wyoming.....	20,620,000

Btu conversions of the electric power sector were based upon the average Btu value for coal at steam-electric plants as shown in "Steam Electric Plant Factors, 1975," published by the National Coal Association.

Petroleum products--The following factors were used to convert the various products volumes to Btu values:

<u>Product</u>	<u>Factor</u> <u>(Btu/barrel)</u>
Gasoline (including aviation).....	5,248,000
Jet fuel.....	5,670,000
Kerosine.....	5,670,000
Distillate fuel oil (including diesel).....	5,825,000
Residual fuel oil.....	6,287,000
Liquefied petroleum gases.....	4,011,000
Asphalt and road oil.....	6,636,000

Natural gas--1,024 Btu/cubic foot was used as the conversion factor to compute Btu values for the household-commercial, industrial, and transportation sectors. This figure is less than that of natural gas (wet) because natural gas liquids have been extracted.

Btu conversions for the inputs to the electric power sector were based upon the average Btu value for natural gas consumed at steam-electric plants as shown in "Steam Electric Plant Factors, 1975," published by the National Coal Association.

Hydropower--For hydropower, energy inputs equivalent to those of the average of the fossil-fueled electric powerplants of each State have been calculated. This was done by multiplying the kilowatt-hours of hydropower output by the weighted average of the Btu's of fossil fuel consumed per kilowatt-hour of output of the fossil-fueled steam-electric powerplants. These theoretical numbers are shown as the energy consumption for hydropower production.

Nuclear power--Energy inputs for nuclear powerplants are calculated at an average heat rate of 10,660 Btu per kilowatt-hour of output, based upon information from the Energy Research and Development Administration.

U.S. Summary Salient Fuel Statistics - 1974

Population 211,445,000

	Anthracite (thousand tons)	Bituminous coal and lignite (thousand tons)	Crude oil (thousand bbl)	Natural gas liquids (thousand bbl)	Natural gas (MMcf)	Uranium (thousand pounds recoverable U ₃ O ₈)
Reserves 1/.....	7,384,500	429,340,900	34,249,956	6,350,449	237,132,497	840,000

r/ Revised.

1/ Petroleum products including still gas, liquefied refinery gas, and natural gas liquids.

2/ Includes 59 trillion Btu net imports of coke in 1974, and 14 trillion Btu in 1975.

Table 2. - Ranking of States in terms of energy consumption
per capita (net and gross), 1974

State	Population (thousands)	Million Btu, net per capita	Million Btu, gross per capita	Rank, net, per capita	Rank, gross, per capita
Wyoming.....	370	654	962	1	1
Louisiana.....	3,753	646	719	2	2

1/ See Definitions.

NOTE.--This table denotes the differences between the U.S. Summary, page 8, and the U.S. Division Summary. These differences are generally due to lack of information on the distribution of certain fuels, to confidentiality of data, or to rounding.

Table 6. - Liquefied petroleum gases used in chemical and rubber manufacture, refinery fuel, and secondary recovery of petroleum by PAD districts, 1974

	Quantity (thousand barrels)	Btu (trillion)
District I.....	15,523	62.3
District II.....	20,303	81.4
District III.....	213,660	857.0
District IV.....	--	--
District V.....	4,182	16.8
Total.....	253,668	1,017.5

NOTE.--These volumes and Btu values included in State data as indicated:

District I --included in West Virginia.
 District II --included in Illinois.
 District III--included in Texas.
 District IV --included in Texas.
 District V --included in California.
