

PROPERTY OF  
LIBRARY  
STATE OF ALASKA  
DIVISION OF  
GEOLOGICAL SURVEY

EXPLANATION

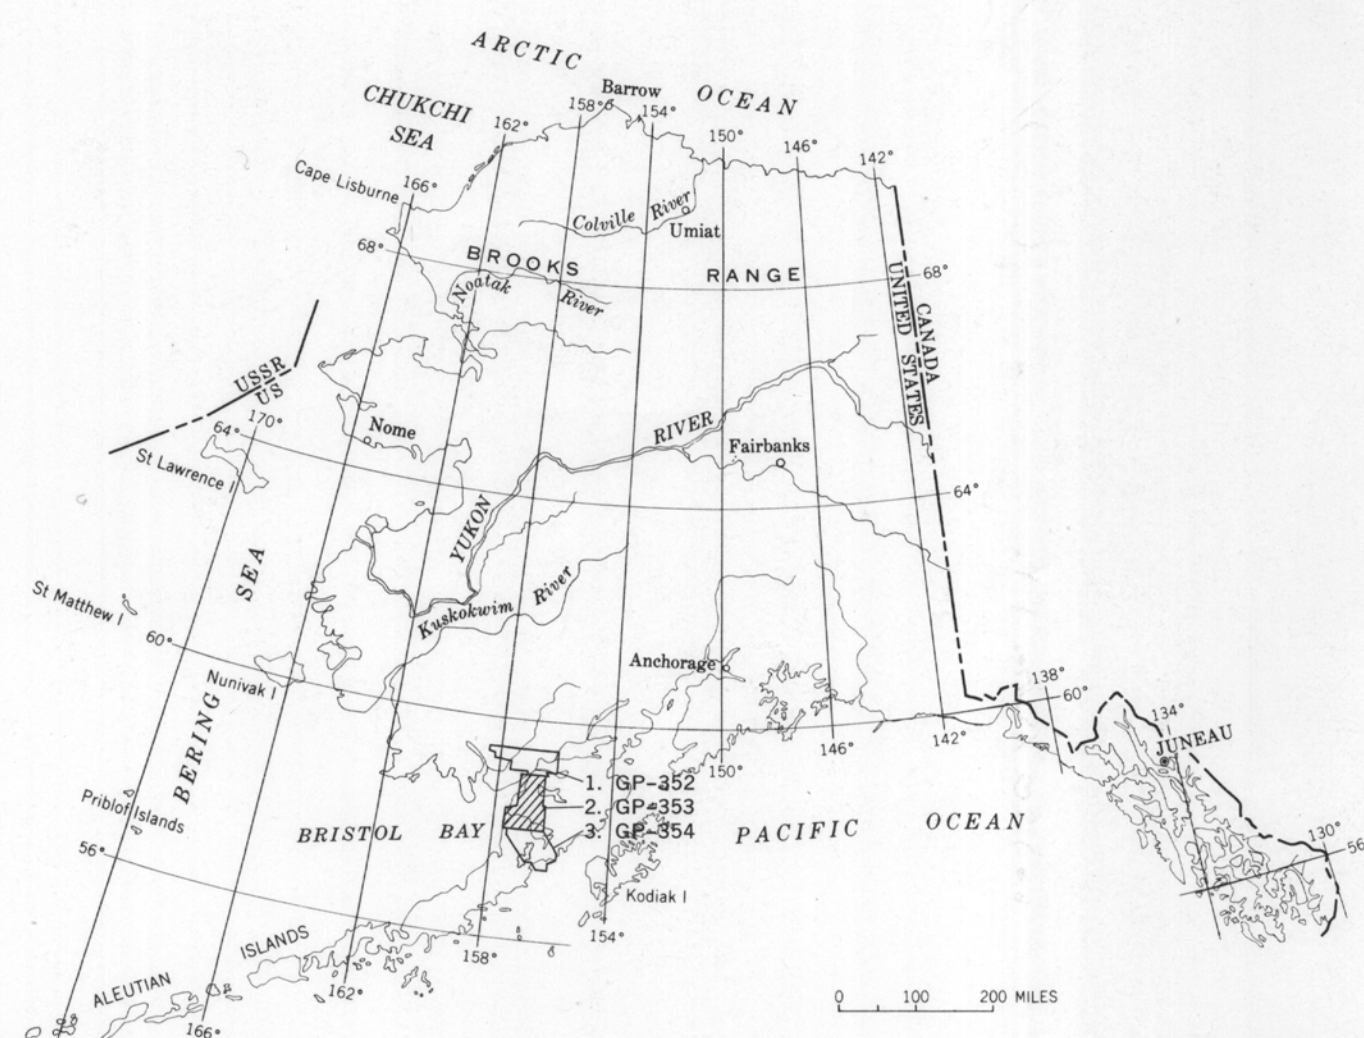

Magnetic contours  
Showing total intensity magnetic field of the earth in gammas, relative to arbitrary datum; hachured to indicate closed areas of lower magnetic intensity. Contours dashed where data are incomplete.

Measured maximum or minimum intensity within closed high or closed low

Flight path  
Showing location and spacing of data

NOTE  
Aeromagnetic data are obtained and compiled along a continuous line, whereas ground magnetic surveys are made at separate points. Errors within the normal limits of any magnetic measurement may cause slight discrepancies between flight lines in an aeromagnetic map, which would be more obvious than similar discrepancies between points in a ground magnetic map. For this reason as much care should be exercised in evaluating magnetic features that appear as elongations along a single aeromagnetic traverse as in interpreting an anomaly indicated by a single ground station.
