

EXPLANATION

Pleistocene and Recent

- Unconsolidated rocks
- Moraine and talus

Triassic (?)

- Stratified rocks
- Amphibole schist (largely hornfels and amphibolite)

Cretaceous (?)

- Intrusive rocks
 - Dikes
 - Quartz-diorite
 - Gabbro (includes some diorite)
 - Norite (includes some pyroxenite and gabbro)
- Prospect pit
- Outline of sulfide-bearing body
- Tunnel
- Diamond-drill hole showing top and bottom
- Location of sections shown on figure 5

Topography by J.E. Mundine, 1940

Geology by J.C. Reed, J.V.N. Dorr 2d, and G.C. Kennedy, 1940 and 1942

Fig 3 Map showing locations of diamond-drill holes in and near the Tripod, Tunnel, Side Hill, and Muskeg sulfide-bearing bodies, Yakobi Island, Alaska
