

EXPLANATION
SAMPLE SITES--Letters are explained on table 1.
 Anomalous site--sample locality at which the concentration is considered to deviate from the upper limit of normal background values, as determined by inspection of histograms, percentiles, and enrichment relative to crustal abundance.

A Concentration
NOTE
 This map is one of a series of geochemical maps concerning the Petersburg area, southeast Alaska. For discussion of sample description, collection methods, media selection, sample preparation, statistical data, and analytical techniques, see Cathrall and others (1983).

Table 1.--Cadmium in 1430 nonmagnetic samples of heavy-mineral concentrates Petersburg area, southeast Alaska.
 [Concentrations in parts per million; >, greater than value shown; N, not detected at limit of detection or at value shown. Arithmetic mean, 137.9, standard deviation, 76.4; geometric mean, 150; and geometric deviation, 3, based on unqualified values within the sample population.]

Concentration	Map symbol	Frequency	Percentile
>500	A	1	100
500	B	1	99.93
300	C	5	99.86
200	D	11	99.51
150	F	24	98.74
100	H	19	97.06
70	J	8	95.73
50	K	10	95.17
N50	X	1351	94.48
