Records and logs of wells and chemical analyses of water samples from wells in the Anchorage area, Alaska

The following pages contain data on representative wells in the Anchorage area collected by the U. S. Geological Survey. The list does not include all the wells on which records have been collected; however, the wells that are listed are representative of the entire area on which information is available.

The numbers assigned the wells are temporary numbers and apply only to this tabulation. The wells are listed in order of their geographical location beginning with Ship Creek and proceeding to the East G Street section, thence to Rogers Park and westward to Spenard. From Spenard the listing progresses southward to Woodland Park, the International Airport area and the Sand Lake-Jewel Lake sections. The tabulation then covers wells on and adjacent to Potter Road, beginning at Fireweed Lane and proceeding southward to Rabbit Creek. The next sequence begins at Mountain View and covers the area southward down Lake Otis Road to Green Acres and from thence northward, covering wells on Tudor, Baxter, Boniface, Muldoon and Oilwell Roads. Several wells in the Ft. Richardson area are listed near the end. The last few wells are late listings which are out of place with reference to the sequence given above.

Logs of wells follow the tabulation of well records. Logs are not available for all the wells listed in the Table of Well Records and a few that are available have not been included.

Analyses of samples of water from wells are given in the Table of Chemical Analyses. These were collected with the intent of providing a general coverage of the area as a whole.

Table 2.--Logs of wells in the Anchorage area, Alaska

Well 1, Ship Creek; A. J. Hopper Company

Altitude, 60 feet

	Thickness (feet)	Depth (feet)
Silty gravel	5	5
Sandy gravel	12	17
Soft blue clay, very fast drilling	188	205
Sandy pebble to cobble gravel; water	5	210

Well 2, Ship Creek; Denali Construction Co.

Altitude, 61 feet

Gravel	12	12
Blue clay	155	167
Pebble gravel; water		

Well 6, 13 St. near East C; Dan Aylward

Altitude, 110 feet

Record missing	25	25
Sandy gravel	15	40
Blue clay	80	120
Clay and pebble gravel (till?)	10	130
Gravel; water	5	135

Well 7, 15 St. and East L; Judd Fowler

Altitude, 112 feet

Sand and small gravel	8	8
Blue clay	18	26
Blue clay and gravel (till?)	25	51
Dry gravel	7	58
Sand; some water	2	60
Gravel and clay (till?)	27	87
Sand	2	89
Gravel; water	2	91

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 11, Chester Creek, near East C St.; Jack Marak

Altitude, 65 feet

	Thickness (feet)	Depth (feet)
Gravel	10	10
Hardpan	6	16
Blue clay	29	45
Gravel; water	15	60

Well 12, Chester Creek and East E St.; Anchorage Oxygen Corp.

Altitude, 64 feet

Blue clay	103	103
Loose silty sand, some pebbles	12	115
Stony clay (till?)	4	119
Sandy pebble gravel with cobbles; water. Flows 3 g.p.m. at 3 feet above sur- face	9	128
Quicksand	5	133
Cement gravel	1	134
Clean gravel; water. Flows.	1	135

Well 13, South of Chester Creek, off East C St.; Ben Boeke

Altitude, 77 feet

Clay	6	6
Till	11	17
Clay	82	99
Gravel ^{1/}		

^{1/} Driller reports that when this stratum was first en-
countered, the water pressure "threw the tools out of the hole"
and water spouted to a height of 24 feet.

Well 17, Chester Creek and Spenard Rd.; Muellers Kennels

Altitude, 18 feet

Top soil and gravel	2	2
Sand	10	12
Gray clay and gravel	7	19
Till	47	66
Gravel; water	1	67

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 18, Chester Creek, off Spenard Rd.; Victor Miller

Altitude, 19 feet

	Thickness (feet)	Depth (feet)
Gravel	3	3
Heaving sand	32	35
Till; thin sand layer with small amount of water at 68 feet	47	82
Clay	3	85
Sandy pebble, gravel	2	87

Well 20, Rogers Park; M. W. Clark

Altitude, 122 feet

Topsoil	2	2
Till (?)	56	58
Gray clay	10	68
Till	11	79
Gravelly silt	1	80
Till	16	96
Sandy gravel, water	5	101
Till	10	111
Quicksand	12	123
Gray clay	2	125
Gravel, sand, silt, some water	9	134
Till	29	163
Coarse gravel; water	1	164

Well 26, C St. and Fireweed Lane; Nat Smith

Altitude, 104 feet

Sand and gravel	18	18
Brown sticky clay	2	20
Gravel	50	70
Brown clay	$\frac{1}{2}$	$70\frac{1}{2}$

Well 28, Fireweed Lane; Spenard Public School

Altitude, 100 feet

Sand	42	42
Fine gravel (trace of water)	2	44
Blue clay and gravel	1	45
Gravel and sand	2	47
Coarse gravel, clay, and sand (till?)	5	52
Sand and medium gravel	13	65
Gravel; water	7	72
Clay		

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 29, Fireweed Lane; Federal Bureau of Investigation
 Altitude, 100 feet

	Thickness (feet)	Depth (feet)
Sand	12	12
Gravel	6	18
Clean coarse gravel	22	40
Sand	5	45
Clean coarse gravel	16	61
Sand and gravel; water	11	72

Well 30, H St. and Fireweed Lane; James Morrison
 Altitude, 99 feet

Sand and pebble gravel	20	20
Blue clay	19	39
Gravel and sand	19	58
Brown-yellow clay (some coal)	4	62
Gravel	10	72
Cobble gravel; water	8	80

Well 33, Fireweed Lane, near Spenard Rd., B. Irvin
 Altitude, 99 feet

Sand and gravel	22	22
Blue clay and gravel (till?)	12	34
Loose gravel	8	42
Sand and gravel	7	49
Gravel and clay (till?)	15	64
Sand and gravel	5	69

Well 34, Spenard Rd., Romig Park Subdivision
 Altitude, 102 feet

Sand and fine gravel	19	19
Blue clay	42	61
Black sand and gravel	11	72
Coal	3	75
Sand and fine gravel	4	79

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 39, west end of Verde Lane, Lee Hancock

Altitude, 96 feet

Sand	18	18
Gray clay	36	54
Dry sand	14	68
Clay and gravel (till?)	30	98
Quicksand	21	119
Gravel and clay (till?)	33	152
Gravel and little clay; water	2	154

Well 48, KFQD Rd., near ARR; Le Norda Triller Court

Altitude, 55 feet

Fine brown sand	15	15
Silt	20	35
Sandy clay	40	75
Sandy clay with hard streaks	40	115
Till	26	141
Black sand	1	142
Till	9	151
Gravel with pebbles up to 1-inch diameter; water		

Well 50, Turnagain Heights; R. Atwood

Altitude, 74 feet

Sand	8	8
Sand and gravel	15	23
Coal	1	24
Blue clay	117	141
Sand and gravel	6	147
Blue clay	3	150

Well 52, Simonson Subdivision

Altitude, 74 feet

Gummy clay	91	91
Sandy gravel	$\frac{1}{2}$	$91\frac{1}{2}$
Gummy clay	$18\frac{1}{2}$	110
Soft clayey silt	58	168
Fine to medium gray sand; water	23	191
Coarse sand and gravel becoming cobble gravel at base; water	20	211

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 67, Adler St., Woodland Park; R. M. Hays

Altitude, 86 feet

	Thickness (feet)	Depth (feet)
Sand, slight clay	120	120
Clay	4	124
Black pea gravel; some water	2	126
Till	22	148
Coarse gravel, grading down to small gravel	4	152

Well 69, Spenard and McRae Rds.; Trailer Roost

Altitude, 89 feet

Top soil and clay	4	4
Gravel and clay	12	16
Brown sandy clay	16	32
Gray sand, some water	25	57
Gray clay	24	81
Gray silt	13	94
Gray clay	7	101
Small gravel, dry	2	103
Till	31	134
Gray silt	4	138
Till	12	150
Sand and gravel	2	152

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 73, McRae Rd., west of Fish Creek;
Tope Construction Co.

Altitude, 59 feet

	Thickness (feet)	Depth (feet)
Brown sand	15	15
Soft blue clay, no stones, with thin layer of sand at base	45	60
Soft blue clay with stones	34	94
Heaving fine gray sand	45	139
Coal	1	140
Sand	8	148
Sand and gravel; water	17	165
Blue silty clay	23	188
Floating fine sand	5	193
Coal and sand	6	199
Fine gray sand	25	224
Blue clay	4	228
Fine sand	1	231
Clay	1	236
Pebbly sand; water	2	237

Well 78, Spenard Rd., west of Fish Creek; Grizzly Trailer Court

Altitude, 64 feet

Top soil	2	2
Gray sand	16	18
Gray clay	14	32
Gray gravel	9	41
Gray clay	4	45
Heaving sand; water	6	51
Hard sandy clay	4	55
Heaving sand; water	24	79
Gray clay	2	81
Gravel and sand; water	2	83

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.
 Well 80, at road forks east of Lake Spenard; "Lido" Motel
 Altitude, 72 feet

	Thickness (feet)	Depth (feet)
Yellow sand	3	3
Soft gray silty clay	120	123
Tough gray clay	7	130
Gray silt	142	272
Gray clay	4	276
Dark gravel, ranging in size from small grains up to pebbles 2 inches in diameter. About 75% of gravel is larger than $\frac{1}{2}$ -inch diameter. Water	2	278

Well 81, near east shore of Lake Spenard; W. W. Fulton
 Altitude, 67 feet

Sand	35	35
Gray clay	17	52
Hardpan	13	65
Coarse gravel with pebbles up to 2 inches in diameter; Water	2	67

Well 83, Southeast shore of Lake Hood; 10th Baseline
 Altitude 72 feet

Sand	24	24

Mountain View; John Vanover

Altitude, 145 feet

	Thickness (feet)	Depth (feet)
Gravel	30	30
Till	76	106
Gravel; water		

Well 152, opposite north end of Anchor Homes Development
on Otis Lake Road, one-half mile southwest
of Airport Heights, USGS Test no. 7

Altitude, 129 feet

Soil	1	1
Sand and gravel	39	40
Till	39	79
Gray fine to medium sand. Negligible water ^{1/}	12	91
Till	50	141
Medium sand becoming gravelly at base. With lower 4 ft. screened yielded 49 g.p.m. with 13.4 ft. of drawdown. Static level is 23.5 ft. below surface. Maximum yield at this stage of development at 140 ft. pumping level is about 300 g.p.m.	10	151
Till	3	154
Medium coarse sand	3	157
Till	16	173
Fine to medium sand. Screen set at 188-192. Yielded initially $8\frac{1}{2}$ g.p.m. with 20 ft. drawdown. Yield decreased materially, probably indicating clogging by fines	18	191
Clayey silt	8	199
Sand and gravel. Short bailer test indicat- ed a yield of 28 g.p.m. with 34 ft. of drawdown.	3	202
Sand and gravel. At 209 ft. initial bailing indicated 19 a.p.m. with 80 ft. of drawdown but after setting 4 ft. of screen the yield appeared stabilized at 50 g.p.m. with 60 ft. of drawdown.	14	216
Silty sand with some pebbles. Bailing open end at 2.0 ft. yielded 20 g.p.m. with 60 ft. of drawdown.	7	223
Medium sand with some pebbles	3	226

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 152, opposite north end of Anchor Homes Development
on Otis Lake Road, one-half mile southwest
of Airport Heights, USGS Test no. 7--Cont.

	Thickness (feet)	Depth (feet)
Clayey sand	9	235
Till	40	275
Medium to coarse sand with some pebbles	1	276
Clayey sand	8	284
Sand with some pebbles	4	288
Silty sand	29	317
Sand and pebbles. Yielded 50 g.p.m. with 41 ft. of drawdown, pumping from open end of casing at 319 ft.	7	324
Sand	10	334
Till	62	396

	Thickness (feet)	Depth (feet)
Medium sand	30	30
Very hard black till	97	127
Clay	3	130
Very hard black till	15	145
Dark gravel, poorly sized, ranges from 2-inch pebbles to medium sand. Bailing open end, obtained about 40 g.p.m. with 25 ft. of drawdown	3	148
Clay	1	149
Hard packed gravel	5	154
Till	19	173
Coarse gravel; water	9	182
Green sand	1	183

Well 166, north end of Baxter Road; Harold Moline

Altitude, 219 feet

Till	36	36
Blue clay	10	46
Silt	9	55
Black sand	13	68
Gray sand	7	75
Till	7	82
Pea gravel; water	1	83

Well 168, Tudor and Muldoon Roads; G. Schwartz

Altitude, 323 feet

Till	78	78
Hard pea gravel; water	3	81

Well 170, Dobin Road, west of northern

Muldoon Road; Frank Toomey

Altitude, 315 feet

Till	107	107
Brown silt	10	117
Black silt	48	165
Black pea gravel; water	12	177

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.

Well 172, corner of Oilwell Road and Palmer Highway; U. S. Army
Altitude, 199 feet

	Thickness (feet)	Depth (feet)
Coarse gravel; hard drilling	33	33
Small gravel; at 50 ft. produces about 6 g.p.m. of rusty water	22	55
Hard packed fine clayey sand	1	56
Small gravel; produces about 8 g.p.m.	2	58
Hard packed fine sand	$11\frac{1}{2}$	$69\frac{1}{2}$
Till	$7\frac{1}{2}$	77
Gravel with clay (till?)	4	81
Clayey blue sand; produces about 5 g.p.m.	5	86
Coarse sand; produces about 10 g.p.m.	2	88
Clayey blue sand	16	104
Till	21	125
Coarse sand; produces about 5 g.p.m.	2	127
Till	18	145
"Gravel with clay"; produces about 20 g.p.m.	3	148
Till	3	151
Sandy cobble gravel; water	6	157

A seven-foot length of 40-slot screen was installed
after 2 days development, a yield of 60 g.p.m. was reported
with $3\frac{1}{2}$ ft. of drawdown in a 72 hr. pumping test.

Table 2.--Logs of wells in the Anchorage area, Alaska--Cont.
 Well 173, Elmwood Rd. off the Palmer Highway at
 Fire Control Station; U. S. Geological Survey Test Well 8
 Altitude, 200 feet

	Thickness (feet)	Depth (feet)
Soil	7	3
Gravel	15	18
Bouldery gravel	27	45
Clay	2	47
Gravel	11	58
Till	28	86
Silty medium sand, water	12	98
Soft till	11	109
Sand, water	2	111
Hard till	8	119
Gray clay	4	123
Fine to medium sand, water	16	139
Hard till	14	153
Silty medium to coarse sand	13	166
Harder medium to coarse sand pumped 6 hrs. from open end hole at 70 g.p.m. with 18 ft. of drawdown. <u>Static 8½ ft. below surface</u>	9	175
Coarse sandy gravel. Short bailer test yielded 14 g.p.m. with 50 ft. of drawdown	6	181
Brown till (?)	33	214
Gray till, very hard. Short pumping test yielded 30 g.p.m. with 9 ft. of drawdown. Water comes from sandy streaks in interval between 217 and 247 ft.	38	252
Brown till, very hard	96	348
Sticky gray clay	22	370
Coal layers in clay	5	375
Sticky gray clay	15	390
Hard sandy clay	2	392
Sand	2	394
Gray sandy clay. Bottom of casing at 397 ft.	53	447
Brown shale with coal streaks and organic matter. In an 8 hr. pumping test yielded 42 g.p.m. with 17 ft. of drawdown. <u>Static</u> <u>level is 75 ft. below surface.</u>	63	510
Gray to black shale with some coal streaks; black shale contains much organic matter; sticky when wet. 1 ft. layer of friable fine-grained green sandstone at 555 ft.	92	602
Fairly hard gray fine- to medium-grained sandstone.	7	609
Gray to black shale, as in interval from 550 to 602 ft. Pumping test at 617 feet yielded 42 g.p.m. with 12 ft. of drawdown at end of 6 hours' pumping; static level is 75 ft. below surface.	8	617
