TABLE DESCRIBING METALLIFEROUS AND SELECTED NONMETALLIFEROUS MINERAL DEPOSITS IN EASTERN SOUTHERN ALASKA

(To accompany open-file map 77-169A)

By E. M. MacKevett, Jr., and C. D. Holloway

EXPLANATORY STATEMENT

This table briefly and objectively describes known deposits and principal occurrences of metallic and some nonmetallic mineral commodities in eastern southern Alaska. The table and accompanying map are part of the Regional Alaska Minerals Resource Assessment Program (RAMRAP) for southern Alaska. They are based on an extensive literature search, consultations with colleagues, and the firsthand knowledge of the authors. In particular, Alaskan mineral deposits maps prepared by E. H. Cobb of the U.S. Geological Survey and information derived from the Alaska Minerals Resource Appraisal Program (AMRAP) were extremely useful in this study. Likewise, U.S. Bureau of Mines maps depicting locations of mining claims were used extensively. Cobb's and the AMRAP and Bureau data were updated and augmented where possible with basic information gleaned from other sources. Even so, large disparities exist in the data base ranging from deposits that are well documented by modern studies to others that are only vaguely mentioned in the old literature.

This report focuses on locating and briefly describing the known deposits in the study region. Another report (in preparation) provides an assessment of the region's mineral endowment and potential mineral resources. However, some information regarding the significance of the deposits can be inferred from the table, particularly under the headings "Type" and "Brief Description".

As used in this report, "eastern southern Alaska" extends from the 138° or 141° meridians westward to the 153° meridian and from the Gulf of Alaska northward to an irregular boundary north of the Alaska Range (see index maps that accompany the mineral deposits map). The deposits are numerically tabulated within their respective 1:250,000-scale quadrangles, which are listed in the following alphabetic sequence (see index map for locations): Anchorage, Bering Glacier, Big Delta (approximate southern one-third), Blying Sound, Cordova, Fairbanks (approximate southern half), Gulkana, Healy, Icy Bay, Kantishna River (approximate southeastern one-sixth), Kenai, McCarthy, Mt. Hayes, Mt. McKinley (approximate eastern five-sixth), Mt. Saint Elias (Alaskan part), Nabesna, Seldovia, Seward, Talkeetna, Talkeetna Mountains, Tanacross (approximate southern one third), Tyonek, Valdez, and Yakutat.

EXPLANATION

TABLE HEADINGS

MAP NO. AND NAME(S) (if known)

Map no. refers to a specific deposit in a given quadrangle on the mineral deposits map and serves to link the map and table. Name(s) of mines or prospects are derived from published sources or from general usage. In some cases more than one mine or prospect are grouped under the same map number. Names in parentheses are duplicate and generally less valid names for the mine or prospect preceding the parentheses.

MAP COORDINATES, LOCATION

Map coordinates indicate the position of each deposit on the mineral deposits map using letters for each degree of longitude and numbers for each degree of latitude. Location refers to the standard township and range land designations relevant to specific parallels and meridians and requires a U.S. Geological Survey quadrangle map (or similar map) for satisfactory use.

CATEGORY

The terms mine, prospect, and occurrence are used as follows:

Mine -- a mineral deposit with recorded production.

Prospect -- a deposit that has been staked and, in most cases, has been scantily explored but lacks evidence of production. Probably many of the placer gold deposits that are listed as prospects have had at least meager production, but because of lack of substantitive evidence they are classified as prospects.

Occurrence -- a deposit that, as far as known, is unclaimed, and is mainly known from recent U.S. Geological Survey or Alaska Division of Geological and Geophysical Surveys field investigations. Numerous, apparently insignificant, minor occurrences are not included in the map and table.

M -- mine with no known post-1950 activity
M -- mine with known or probable post-1950 activity
p -- prospect with no apparent post-1950 activity
P -- prospect with apparent post-1950 activity
O -- occurrence

RESOURCE(S)

Indicates the main mineral commodity or commodities (by standard chemical symbols) that have been produced or for which the deposit is noteworthy. Minor constituents, byproducts, or potential byproducts are shown in parentheses.

FORM

Denotes the physical aspect of a deposit.

TYPE

The deposits are classified according to generally used deposit types, most of which have genetic connotations. In a broad sense most metalliferous mineral deposits are hydrothermal; in many cases, deposits that don't readily conform to other types are listed in the table as hydrothermal. Due to the paucity of information, classifications for some deposits are arbitrary; in general such classifications are queried.

BRIEF DESCRIPTION

Provides brief descriptions of the geology and mineralogy of the deposits and, in some instances, production and historical data.

PRINCIPAL REFERENCES

Cites sources for information used in the table and map. A list of references cited follows the table.

Abbreviations used

Standard chemical symbols -- for example, Au for gold; Cu for copper.
m for meter

Minerals

aspy -- arsenopyrite
az -- azurite
bn -- bornite
calc -- calcite
cc -- chalcocite
chl -- chlorite
chrys -- chrysocolla
cl -- chalcanthite
cp -- chalcopyrite
cub -- cubanite
cup -- cuprite
cv -- covellite
dig -- digenite
epid -- epidote
gn -- galena
hem -- hematite
ilm -- ilmenite
lim -- limonite
mgt -- magnetite
ml -- malachite
mo -- molybdenite
ms -- marcasite
po -- pyrrhotite
py -- pyrite
qz -- quartz
re -- realgar
sb -- stibinite
sch -- scheelite
sl -- sphalerite
td -- tetrahedrite
ten -- tenorite

2 Spruce Creek	Q,12 Tps.9,10S.,R.7W.	p	Au,Ag(Sb)	Vein	Hydrothermal	Thin Au-bearing veins in schist that generally contain jamesonite, scorodite, and aspy	Joesting, 1943, p. 14
3 Moose Creek	Q,12 T.10S.,R.7W.	p	Au	Disseminated	Metamorphic?, hydrothermal?	aspy and py in oxidized schist; minor Au	Overbeck, 1915, p. 360
4 Liberty Bell (Eva Creek)	Q,12 T.10S.,R.7W.	M	Au(Ag,Bi)	Disseminated	Metamorphic?, replacement, hydrothermal?	Au associated with aspy and lesser amounts of py, cp, and bismuthinite in lower Paleozoic or older schist; near a porphyritic granitic pluton; minor production	Moffit, 1933a, p. 340-345
5 California Creek	Q,12 T.10S.,R.6W.	M	Ag(Au,Cu,Bi)	Vein	Hydrothermal	Small Ag-rich sulfosalt-bearing veins that cut Paleozoic or older schist	Joesting, 1943, p. 13-14
6 Caribou Creek	Q,12 T.10S.,R.6W.	p	Sb	Vein	Hydrothermal	sb-bearing vein in Paleozoic or older schist	Joesting, 1942, p. 12
7 Eagle Creek	Q,12 T.10S.,R.6W.	p	Sb	Vein	Hydrothermal	sb-bearing veins in Paleozoic or older schist	Joesting, 1943, p. 13
8 Moose Creek	Q,12 T.10S.,R.7W.	M	Au	Disseminated	Placer	Stream and bench placers in an old schist terrane that contains some intrusive rocks; minor to trace amounts of Pt, cinnabar, sch, and cassiterite in the placer concentrates	Maddren, 1918, p. 365-368; Joesting, 1942, p. 20, 27, 34, 39
9 Little Creek	Q,12 T.10S.,R.7W.	M	Au	Disseminated	Placer	Similar to Moose Creek (8)	Maddren, 1918, p. 365-368
10 Rex Creek	Q,12 T.9S.,R.7W.	M	Au	Disseminated	Placer	Au placers in basal stream gravels; mainly in a terrane of Paleozoic and older schist	Maddren, 1918, p. 361-363
11 Eva Creek	Q,12 T.10S.,R.6W.	M	Au	Disseminated	Placer	Stream placers in a region of old schist and Tertiary continental sedimentary rocks	Maddren, 1918, p. 364-366
12 California Creek	Q,12 T.10S.,R.6W.	M	Au	Disseminated	Placer	Stream placers in a region of Paleozoic and older schist	Maddren, 1918, p. 360
13 California Creek	Q,12 T.10S.,R.6W.	M	Au	Disseminated	Placer	Stream placers in a region dominated by old schist	Maddren, 1918, p. 360; Capps, 1912, p. 46
14 McAdam Creek	Q,12 T.10S.,R.6W.	M	Au	Disseminated	Placer	Stream placers in an area of Tertiary continental sedimentary rocks and Paleozoic and older schist	Moffit, 1933a, p. 345
15	Q,12 T.9S.,R.5W.	P	Au	Disseminated	Placer	Sparsely distributed placer Au in flood plain gravels and stream placers	Maddren, 1918, p. 362
16 Totatlanika Creek	Q,12 T.10S.,R.5W.	M	Au	Disseminated	Placer	Mainly stream placers in a region of Paleozoic and older schist and Tertiary subaerial sedimentary rocks; the schist contains quartz veins and is cut by felsic dikes	Maddren, 1918, p. 361-364

1 Meier Lake	T.10 T.12N.,R.2W.	O	(Cu,Fe)	Pods, disseminated	?	Traces of cp in small, irregular pods of sgt; in upper Paleozoic greenschist and associated sheared Mesozoic diorite	Rose and Saunders, 1965, p. 13
2	T.10 Tps.10,11N.,R.1W.	O	(Cu)	Fracture coating	Hydrothermal, porphyry?	py and traces of cp along fractures in granodiorite (Mesozoic?)	Rose and Saunders, 1965, p. 14
3 Hogan Hill	T.10 T.10N.,R.1W.	P	(Cu,Au)	Vein	Hydrothermal, metamorphic?	Small qz veins that contain minor cp; in upper Paleozoic amphibolite	Rose and Saunders, 1965, p. 14
4 Indian Creek West Fork (Burns)	U.10 Tps.12,13N.,R.6E.	P	Ag,Pb(Cu)	Vein	Hydrothermal	qz vein, 0.5 to 2.5 m thick, that cuts Ahtell pluton (upper Paleozoic); the vein contains argentiferous gn and minor cp and td	Thorne, 1946, p. 5-6; Smith, 1932, p. 124
5 Indian	U.10 T.12N.,R.6E.	P	Ag,Pb(Cu)	Vein	Hydrothermal	qz veins, generally less than 1 m thick, that cut a quartz monzonite phase of the Ahtell pluton (upper Paleozoic); the veins carry argentiferous gn and minor cp, td, and secondary Cu minerals	Richter, 1966, p. 29-30; Thorne, 1946, p. 3-5
6	U.10 T.12N.,R.7E.	P	Cu,Mo(Ag,Pb)	Vein, veinlet, disseminated	Hydrothermal, porphyry	Two modes of occurrence in border phase of Ahtell pluton: (1) large altered zone that contains py and minor mo in veinlets and disseminations, (2) qz veins with minor cp and its alteration products	Richter, 1966, p. 31
7 The Dome	U.10 T.12N.,R.7E.	P	Cu(Pb,Ag)	Vein, disseminated	Stockwork, metamorphic?	Stockwork of qz-calc veins, less than 0.5 m thick, that carry subordinate gn and cp; in siliceous border phase of Ahtell pluton; also disseminated py and minor cp in nearby hornfels	Richter, 1966, p. 31
8 Ahtell Creek, West Fork (Neversweat)	U.10 T.12N.,R.7E.	P	Pb(Cu)	Vein	Hydrothermal	Thin qz veins in shear zones in quartz monzonite of Ahtell pluton; contain gn and minor cp	Richter, 1966, p. 30-31; Thorne, 1946, p. 6-7
9	U.10 T.13N.,R.7E.	P	Cu	Vein?	Hydrothermal?	Probably Cu-bearing veins in Ahtell pluton	Richter and Matson, 1972
10 Judy	U.10 T.14N.,R.7E.	P	Cu(Au)	Vein?	Hydrothermal?	Probably Cu-bearing veins in Ahtell pluton	Richter and Matson, 1972
11 Silver Creek	U.10 T.11N.,R.7E.	P	Ag(Cu,Pb,Zn)	Vein	Hydrothermal	Mineralized qz-carbonate veins in a fault zone, at least 30 m wide, that separates dioritic rocks of Ahtell pluton from Upper Paleozoic volcanic and sedimentary rocks; vein minerals include gn, cp, td, sl, and py.	Richter, 1966, p. 32-33; Thorne, 1946, p. 7-8
12 Gold Quartz	U.10 T.11N.,R.7E.	P	Au(Ag,Cu,Pb,Zn)	Vein	Hydrothermal	qz-carbonate vein that cuts Upper Paleozoic volcanic rocks; the vein carries sl, Au, gn, cp, and py	Richter, 1966, p. 33
13 Silver Shield	U.10 T.11N.,R.7E.	P	Ag(Pb,Cu)	Vein, pods	Hydrothermal	qz veins and pods that contain gn, td, and some barite and cerussite and are localized in a shear zone that cuts Upper Paleozoic volcanic rocks	Richter, 1966, p. 32

ICY BAY QUADRANGLE
(latitude, 59°-60°; longitude, 141°-144°)

Part of the Gulf of Alaska covers almost all of the quadrangle. Placer gold deposits have been reported from near Icy Bay, probably within the boundaries of the quadrangle.

KANTISHNA RIVER QUADRANGLE (Approximate southeastern one-sixth of quadrangle)
(latitude, 64°-65°; longitude, 150°-153°)

19		W,9 T.6S.,R.17E.	O	Sb(W,Au)	Vein	Hydrothermal	Series of sb-bearing veins that cut Nizina Limestone (Triassic)	MacKevett and Smith, 1968, p. 10,11,15; MacKevett, 1976
20		W,9 T.6S.,R.17E.	O	Sb	Vein	Hydrothermal	Narrow veins in fe-stained fault zone, 3 m wide	MacKevett and Smith, 1968, p. 10,11,14; MacKevett, 1976
21		W,9 T.6S.,R.17E.	P	Cu(Ag)	Vein	Hydrothermal	Sporadically distributed veins as much as 5 cm wide in Nikolai Greenstone; the veins contain cc, cp, po, cv, and ml	MacKevett and Smith, 1968, p. 10,11,14; MacKevett, 1976
22	Taylor	W,9 T.6S.,R.16E.	P	Au(Ag,Cu)	Vein, small pods, and disseminated	Hydrothermal	Minor disseminations and pods and a few thin qz veins at and near contact between a Tertiary felsic pluton and Cretaceous hornfels	MacKevett and Smith, 1968, p. 10,11,15; MacKevett, 1976
23	Crumb Gulch prospects	W,9 T.6S.,R.16E.	P	Au,Sb	Vein	Hydrothermal	Veins as much as 30 cm thick in shear zones cutting Cretaceous hornfels near Tertiary granodiorite	MacKevett and Smith, 1968, p. 8,9,14; MacKevett, 1976
24	Dan Creek	W,9 T.6S.,R.16E.	M	Au(Ag,Cu)	Disseminated	Placer	Dan Creek placers and those of Copper Creek and its tributaries accounted for slightly less than half of the Nizina district's gold production, which, as of 1959, was approximately 143,500 ounces; small-scale recent activity	Moffit and Capps, 1911, p. 98-113; Koschmann and Bergendahl, 1968, p. 14; MacKevett, 1976
25	Nikolai Butte prospects	W,9 T.6S.,R.16E.	P	Cu(Ag,Pb,Zn)	Vein and coating	Hydrothermal	Several small prospects that explored narrow veins in steep faults, mainly in Nikolai Greenstone near contacts with Chitistone Limestone	MacKevett and Smith, 1968, p. 8-11,14; MacKevett, 1976
26	O'Hara	V,9 T.6S.,R.9E.	P	Zn,Pb(Ag)	Vein and pods	Hydrothermal, replacement?	Veins, as much as 20 cm thick, and small pods in Permian marble; the deposits contain sl, ga, py, ms, and po	Berg and Cobb, 1967, p. 64; MacKevett, 1976
27		V,9 T.6S.,R.9E.	O	Zn(Pb)	Disseminated	Hydrothermal	Permian marble that contains scattered sulfides	MacKevett, 1976
28	Erickson	W,9 T.5S.,R.18E.	M	Cu(Ag)	Massive, vein	Subaerial volcanogenic	Native Cu, ten, cup and minor amounts of other copper minerals in Nikolai Greenstone; minor production in 1917	Miller, 1946, p. 117, 118; MacKevett and Smith, 1968, p. 12, 13,16; MacKevett, 1976
29		W,9 T.5S.,R.18E.	O	Cu(Ag)	Disseminated	Hydrothermal	Mineralized and altered zone between gabbro and Hasen Creek (Permian) sedimentary rocks; zone to 3 m wide	MacKevett and Smith, 1968, p. 12,13,16; MacKevett, 1976
30	Radovan Low contact	W,9 T.5S.,R.17E.	P	Cu	Vein and disseminated	Hydrothermal	Sporadically distributed cc, cp, py; ms, re, and sb in a brecciated fault zone that juxtaposes Nikolai Greenstone and Chitistone Limestone	Miller, 1946, p. 114-117; Pilgrim, 1933, p. 90-92; Sainsbury, 1952, p. 14-17; MacKevett and Smith, 1968, p. 8,9,14; MacKevett, 1976
31	Binocular	W,9 T.5S.,R.17E.	P	Cu(Ag)	Pods and coatings	Sabkha?, replacement?	Small ml-stained cc masses in near basal Chitistone Limestone	Miller, 1946, p. 114; MacKevett, 1976
32	Radovan Greenstone	W,9 T.5S.,R.17E.	M	Cu(Ag)	Vein	Hydrothermal	cc-rich vein, 1-3 m thick, in fault cutting Nikolai Greenstone	Sainsbury, 1952, p. 12-14; MacKevett and Smith, 1968, p. 8,9, 14; MacKevett, 1976
33		W,9 T.5S.,R.19E.	P	Cu	Vein	Hydrothermal	calc-rich veins as much as 1 m thick in lower part of Chitistone Limestone	MacKevett and Smith, 1968, p. 8,9,14; MacKevett, 1976
34	Nelson	W,9 T.5S.,R.17E.	M	Cu(Ag)	Massive and vein	Sabkha, replacement, hydrothermal	A Kennecott-type Cu deposit that contains cc, cv, and other Cu minerals in a faulted block of Chitistone Limestone	Bateman, 1932, p. 297-306; Miller, 1946, p. 110-114; Sainsbury, 1952, p. 1-12; MacKevett and Smith, 1968, p. 8,9,14; MacKevett, 1976
35		W,9 T.5S.,R.17E.	O	Cu(Ag)	Vein	Hydrothermal	ml and qz-bearing vein, 0.5-1 m thick, in fault that cuts Nikolai Greenstone	MacKevett and Smith, 1968, p. 12,13,15; MacKevett, 1976
36	Snow Bird	W,9 T.5S.,R.16E.	P	Cu(Ag)	Vein	Hydrothermal	Cu-bearing vein 0.5-1.5 m thick in shear zone that cuts Nikolai Greenstone; vein contains bn, cc, cp, py in a qz-calc gangue	Moffit, 1910a, p. 176-177; MacKevett and Smith, 1968, p. 8,9, 14; MacKevett, 1976

37	Westover	W,9 T.5S.,R.16E.	M	Cu(Ag)	Massive, lenticular, disseminated	Sabkha, replacement, hydrothermal	Mainly consists of bn-rich lenses localized in lower part of Chitistone Limestone	Miller, 1946, p. 109-110; Moffit and Capps, 1911, p. 95-97; Moffit, 1918a, p. 165-177; MacKevett and Smith, 1968, p. 8,9, 14; MacKevett, 1976
38	Peavine	W,9 T.5S.,R.16E.	M	Cu(Ag)	Vein, coating, disseminated	Hydrothermal	cc, ml, and az in brecciated fault zone that cuts Nikolai Greenstone and Chitistone Limestone; small production	Miller, 1946, p. 120; MacKevett and Smith, 1968, p. 8,9,14; MacKevett, 1976
39	Schulze	W,9 T.5S.,R.15E.	P	Cu(Ag)	Pod and vein	Sabkha?, replacement	A Kennecott-type Cu deposit; small cc-rich pod and stringer veins in lower part of Chitistone Limestone	MacKevett, 1976
40	Nikolai	W,9 T.5S.,R.15E.	P	Cu	Vein	Hydrothermal	Two-Cu-bearing veins, each less than 1 m thick, that cut Nikolai Greenstone; the veins contain bn, cp, py, po, and secondary Cu and Fe minerals	Miller, 1946, p. 106-108; Mendenhall and Schrader, 1903a, p. 28, 29; MacKevett, 1976
41	Porphyry Mountain	W,9 T.5S.,R.14E.	P	Au,Mo	Vein	Hydrothermal	Thin, sheared qz vein that contains some mo and Au; cuts a Tertiary pluton	MacKevett and Smith, 1968, p. 8,9,14; MacKevett, 1976
42		W,9 T.5S.,R.13E.	O	Cu	Vein	Hydrothermal	Altered vein about 15 cm thick that cuts a Tertiary pluton	Winkler and others, 1971, p. 4,6; MacKevett, 1976
43		W,9 T.4S.,R.22E.	O	Cu	Vein and disseminated	Hydrothermal, subaerial volcanogenic	Native Cu, cc and their alteration products in poorly exposed Nikolai Greenstone	MacKevett, 1976
44	Houghton Alaska	W,9 T.4S.,R.17E.	P	Cu	Vein and coating	Hydrothermal	Several old prospects on narrow veins in minor faults near upper contact of Nikolai Greenstone	Miller, 1946, p. 120; MacKevett, 1976
45	Contact Gulch	W,9 T.4S.,R.17E.	P	Cu	Vein and coating	Hydrothermal	Old surficial prospects in Nikolai Greenstone; explored scattered bn-bearing veinlets and ml surface coatings	Moffit and Maddren, 1908, p. 167; Moffit and Maddren, 1909, p. 90; MacKevett, 1976
46		W,9 T.4S.,R.16E.	P	Cu	Massive and disseminated	Replacement?, hydrothermal	Small mass of Cu minerals in Nikolai Greenstone near apex of an overturned fold; recent exploration	MacKevett and Smith, 1968, p. 8,9,14; MacKevett, 1976
47	Green Butte	W,9 T.4S.,R.15E.	M	Cu(Ag)	Massive, vein	Sabkha, hydrothermal	A Kennecott-type deposit that contains cc-rich lodes localized in lower part of the Chitistone Limestone; produced about 1500 tons of high-grade ore	Miller, 1946, p. 103, 104; MacKevett, 1976
48	Tjosevig	W,9 T.4S.,R.15E.	P	Cu(Ag)	Massive, vein	Sabkha, hydrothermal	A Kennecott-type deposit in the lower part of the Chitistone Limestone; known deposits at the prospect are small	Miller, 1946, p. 104, 105; MacKevett, 1976
49	Bonanza, Mother Lode, and Independence (Kennecott mines)	W,9 T.4S.,R.14E.	M	Cu(Ag)	Massive, vein, disseminated	Sabkha, hydrothermal	The Bonanza was the first-discovered Kennecott-type deposit and a major producer; cc-rich lodes in lower part of Chitistone Limestone; only minor production since 1938; the Mother Lode is a Kennecott-type deposit with moderate production and some recent exploration; the Independence explored cc- and bn-bearing veins in upper parts of the Nikolai Greenstone	Bateman and McLaughlin, 1920; Miller, 1946, p. 93-101; Moffit and Capps, 1911, p. 92; Douglass, 1964, MacKevett, 1976
50	Jumbo (Kennecott mines)	W,9 T.4S.,R.14E.	M	Cu(Ag)	Massive, vein, disseminated	Sabkha, hydrothermal	Largest producer of the Kennecott mines and accounts for most of the [illegible] billion pounds of copper and 9 million ounces of silver production from the Kennecott mines; cc-rich lodes in lower part of the Chitistone Limestone	Bateman and McLaughlin, 1920; Miller, 1946, p. [illegible]; Douglass, 1964; MacKevett, 1976
51	Erie (Kennecott mines)	W,9 T.4S.,R.14E.	M	Cu(Ag)	Massive, vein, disseminated	Sabkha, hydrothermal	A Kennecott-type deposit; mainly cc-rich lode in lower part of Chitistone Limestone	Bateman and McLaughlin, 1920; Miller, 1946, p. 98-101; Douglass, [illegible]

MAP NO. AND NAME(S) (if known)	MAP COORDINATES, LOCATION	CATEGORY	RESOURCE(S) Minor constituents or potential byproducts in parentheses	FORM	TYPE	BRIEF DESCRIPTION	PRINCIPAL REFERENCES
1 Slate Creek (Taylor)	N,11 T.16S.,R.18W.	M	Sb	Vein, Stockwork	Hydrothermal	qz veins as much as 6 m. thick and stockworks in early Paleozoic or Precambrian "Birch Creek" Schist; the veins are rich in sb and also contain aspy, py, sulfosalts, and secondary Sb minerals; produced about 800,000 pounds of Sb	Capps, 1919d, p. 107-108; Eobley and Wright, 1948, p. 20-22; Bundtzen and others, 1977; p. 27-28
2 Bonnell (Neversweat)	N,11 T.16S.,R.18W.	P	Pb,Ag(Cu,Au, Zn, Sb)	Vein, disseminated	Hydrothermal	Polymetallic vein near contact between Tertiary quartz porphyry and old schist; also disseminations in the qz porphyry; the deposits contain an array of metal-bearing minerals, including sulfosalts	Wells, 1933, p. 376 Morrison, 1964, p. 97-98; Bundtzen and others, 1972, p. 28
3 Alpha	N,11 T.16S.,R.18W.	M	Ag,Pb(Sb,Zn, Au,Cu)	Vein	Hydrothermal	qz-siderite vein as much as 1 m thick that cuts "Birch Creek" schist; the vein is mineralogically complex and contains gn, sb, sl, py, aspy, and several sulfosalts	Wells, 1933, p. 354, 375-376; Bundtzen and others 1977, p. 29
4 Frances, Lucky Strike	O,11 T.16S.,R.18W.	P,O	Ag(Au,Zn)	Vein	Hydrothermal	Several prospects and occurences, mainly on qz veins that cut schist and marble	Morrison, 1964, p. 98-99; Wells, 1933, p. 368; Davis, 1923, p. 124; Bundtzen and others, 1977, p. 30
5 Sulphide, Water Level	O,11 T.16S.,R.18W.	p	Ag(Au,Pb)	Vein	Hydrothermal	gn-bearing qz-py-siderite veins that cut "Birch Creek" rocks	Davis, 1923, p. 130
6 Hillside (Silver King), Red Top, Galena, Little Maud, Martha Q, North Star, Silver Pick	O,11 T.16S.,R.18W.	M, P	Ag(Au,Pb,Cu, Zn, Sb)	Vein	Hydrothermal	Polymetallic qz-siderite veins, typically less than 3 m thick, that cut "Birch Creek" rocks; the veins contain gn, aspy, py, sl, cp, and several sulfosalts	Davis, 1923, p. 121-125; Wells, 1933, p. 361-364, 368-369; Capps, 1919d, p. 105-106; Stewart, 1921, p. 13; Bundtzen and others, 1977, p. 30-31
7 Gold Dollar, Golden (Gold) Eagle, Little Annie, Polly Wonder	O,11 T.16S.,R.18W.	M	Ag(Au,Pb,Zn, Cu, Sb)	Vein	Hydrothermal	Ag-rich qz-siderite veins that cut "Birch Creek" rocks; the veins contain py, gn, aspy, sl, and an array of sulfosalts	Davis, 1923, p. 125-129; Wells, 1933, p. 355-356, 364-367; Capps, 1919d, p. 103-104; Bundtzen and others, 1977, p. 31-32
8 Florence and unnamed occurrence	O,11 T.16S.,Rs.17,18W.	p,O	Ag(Au,Pb)	Vein	Hydrothermal	gn and sulfosalt-bearing qz veins that cut "Birch Creek" terrane	Morrison, 1964, p. 100-101; Wells, 1933, p. 371; Bundtzen and others 1977, p. 32
9 Gold King, Keystone, Pennsylvania	O,11 T.16S.,R.17W.	p	Au(Ag,Pb,Zn,W)	Vein	Hydrothermal	qz veins, generally about 1 m thick, that cut "Birch Creek" rocks; the veins typically contain py and aspy and lesser amounts of gn, sl, and sch	Capps, 1919d, p. 103; Davis, 1923, p. 129-130; Bundtzen and others, 1977, p. 32
10 Banjo, Eureka (Damon and Pythias) (Merry Widow)	O,11 T.16S.,R.17W.	M	Au,Ag(Pb,Zn,W)	Vein	Hydrothermal	Extensive qz vein system that cuts "Birch Creek" rocks; the veins contain Au, aspy, py, and minor amounts of other metallic minerals and sch; largest lode producer in Kantishna district with a production of about 6,260 ounces of gold and 7,113 ounces of silver	Wells, 1933, p. 370-371; Bundtzen and others, 1977, p. 33

11 Bosart	O,11 T.15S.,R.17W.	P	Ag(Au,Pb,Zn)	Vein	Hydrothermal	qz-siderite vein that contains gn, sl and sulfosalts; rich in Ag, cuts "Birch Creek" rocks	Wells, 1933, p. 371-372; Bundtzen and others, 1977, p. 33
12 Weller and unnamed occurrences	O,11 T.16S.,R.17W.	P,O	Ag,Au(Pb,Zn)	Vein	Hydrothermal	py-qz veins that contain gn, sl, and sulfosalts and cut "Birch Creek" rocks	Bundtzen and others, 1977, p. 34
13 McGonagall (McGonogill), Glen (Swisher)	O,11 T.16S.,R.17W.	M	Au(Ag,Pb,Zn)	Vein	Hydrothermal	aspy-py bearing qz veins that contain minor gn, sl, and sulfosalts; cut "Birch Creek" rocks	Davis, 1923, p. 131-132; Wells, 1933, p. 372-373; Bundtzen and others, 1977, p. 35
14 Glen Creek divide	O,11 T.15S.,R.17W.	p	Ag(Au,Pb)	Vein	Hydrothermal	qz veins that cut "Birch Creek" rocks and contain aspy, py, minor gn and sulfosalts	Bundtzen and others, 1977, p. 35, Wells, 1933, p. 373
15 Arkansas, Glen Ridge No. 1, Pension, Humboldt	O,11 T.15S.,R.17W.	p,M	Ag,Au(Pb,Zn,Sb)	Vein	Hydrothermal	qz veins that cut "Birch Creek" rocks and contain aspy, sulfosalts, gn, and sl; the Humboldt produced a little Au	Davis, 1923, p. 132; Wells, 1933, p. 373; Bundtzen and others, p. 35-36, Capps, 1919a, p. 99
16 Lloyd	O,11 T.16S.,R.16W.	p	Cu(Au,Zn)	Disseminated	Possibly submarine volcanogenic, hydrothermal	Disseminated sulfides, including cp and sl, and mgt in a quartzite band as much as 2 m thick within "Birch Creek" schist; some aspy-bearing qz veins nearby	Capps, 1919d, p. 99; Bundtzen and others, 1977, p. 36
17 Lena, Lucky Jim, Mystery, North Star, Ridgetop, Silver Wire	O,11 T.15S.,R.16W.	P	Ag(Au,Pb,Cu)	Vein	Hydrothermal	qz veins, generally less than 2 m thick, that cut "Birch Creek" terrane; the veins contain py, gn, and sulfosalts	Davis, 1923, p. 132; Wells, 1933, p. 375; Bundtzen and others, 1977, p. 37
18	N,11 T.16S.,R.18W.	p	Sb	Vein	Hydrothermal	sb-qz vein cutting "Birch Creek" schist	Bundtzen and others, 1977, p. 28
19 Eagles Nest	N,11 T.16S.,R.18W.	P	Sb	Vein	Hydrothermal	qz-sb vein with massive sb as much as 1 m thick; cuts "Birch Creek" rocks, other sb veins nearby	Bundtzen and others, 1977, p. 29
20 Home Lode	O,11 T.15S.,R.17W.	p	Sb	Vein	Hydrothermal	qz-sb vein in qz-muscovite schist	Wells, 1933, p. 377
21 Caribou (Last Chance)	O,11 T.15S.,R.17W.	M	Sb(Au,Ag)	Vein	Hydrothermal	sb-bearing qz vein that cuts "Birch Creek" rocks; contains sb, po, py, Au, and sulfosalts	Capps, 1919a, p. 108; Wells, 1933, p. 377-378; Bundtzen and others, 1977, p. 36
22	O,11 T.15S.,R.16W.	P	Sb(Au,Pb,Zn)	Vein	Hydrothermal	qz vein cutting "Birch Creek" rocks; the vein contains sb, gn, and sl; some limonitic gossans in vicinity	Bundtzen and others, 1977, p. 37
23	O,11 T.15S.,R.16W.	O	Cu(Ag,Pb)	Disseminated, Vein	Submarine volcanogenic, hydrothermal	Two deposit types represented in vicinity: (1) disseminated py and cp in mafic volcanic schist; (2) swarm of py-qz veins that contain minor gn, all in "Birch Creek" terrane	Bundtzen and others, 1977, p. 37-38
24	O,11 T.14S.,R.15W.	O	Cu	Disseminated	Magmatic	Disseminated sulfides, including cp, in a swarm of Tertiary gabbro dikes	Bundtzen and others, 1977, p. 38
25	O,11 T.14S.,R.15W	O	Sb	Vein	Hydrothermal	sb-rich gash veins in schist	Bundtzen and others, 1977, p. 38
26 Stampede	O,11 Tps.13,14S.,R.15W.	M	Sb(Au,Zn)	Vein	Hydrothermal	Large sb-qz veins in "Birch Creek" schist, contain some Au, sl, py, and po; probably Alaska's premier Sb prospect with a production of 1,729 tons of Sb, good [illegible]	White, 1942, p. 338-346; Barker, 1980; Bundtzen and others, 1977, p. 38

MT. SAINT ELIAS QUADRANGLE (ALASKAN PART)
(Boundaries of quadrangle: latitude, 60°-61°; longitude, 138°-142°)

No mineral deposits or significant occurrences are known in this scantily explored quadrangle. Only a few geochemical samples have been collected from the quadrangle, including two of metavolcanic rocks with disseminated pyrite that contained minor anomalous amounts of copper and silver.

NABESNA QUADRANGLE
(latitude, 62°-63°; longitude, 141°-144°)

29 Jack Bay (1)	S,9 T.9S.,R.6W.	P	Cu (Pb, Zn)	Disseminated	Submarine volcanogenic?, hydrothermal?	Mineralized shear zone about 1 m wide in Valdez Group graywacke contains aspy, cp, po, sl, and gn; several other copper occurrences in vicinity	Moffit and Fellows, 1950, P. 53; Johnson, 1919b, P. 171-172
30 Jack Bay (2)	S,9 T.10S.,R.8W.	P	Cu (Zn)	Disseminated	Submarine volcanogenic	Mineralized inclusions of Valdez Group rocks in sheared greenstone of the Valdez; py, po, cp, and sl disseminated in the inclusions	Moffit and Fellows, 1950, P. 52; Johnson, 1919b, P. 171-172
31 Curly Kidney	S,9 T.10S.,R.8W.	P	Au	Vein, lens	Hydrothermal	qz stringers and small lenses in shear zones that cut graywacke with minor argillite (Valdez Group?); some aspy and Au with the qz	Johnson, 1919b, P. 172
32 Midas	S,9 T.10S.,R.6W.	M	Cu (Ag, Au, Zn)	Disseminated, vein	Submarine volcanogenic, hydrothermal	Mineralized shear that averages about 1 m wide and is about 300 m long mainly in black slate (Valdez Group), near schistose greenstone; the ore consists of py, po, cp, sl, and traces of gn; a few other showings nearby	Johnson, 1915, P. 151-153, 156-157, 187-188; Moffit and Fellows, 1950, P. 51-52; Rose, 1965a, P. 8-12
33 Addison Powell, Sulfide Gulch	S,9 T.10S.,R.9W.	P	Cu (Au, Ag)	Massive, disseminated	Submarine volcanogenic	Not accurately located; reported (Johnson, 1916) as a large low-grade copper deposit; Rose (1965) found po masses and disseminations that contain minor cp in schistose Valdez greenstone in general vicinity of prospect	Johnson, 1916, P. 140; Moffit and Fellows, 1950, P. 52-53; Rose, 1965a, P. 10, 12
34 Townsend and Holland	T,9 T.8S.,R.1W.	P	Au	Vein	Hydrothermal	Thin qz veins in sheared slate of the Valdez Group	Moffit, 1935, P. 35-36
35 Knowles	T,9 T.6S.,R.1W.	P	Au (Pb)	Vein, lens	Hydrothermal	qz veins, generally less than 1 m thick and as much as 300 m long, cutting Valdez Group slate and graywacke; contains a little free Au, py, and gn	Moffit, 1935, P. 32-35
36 Eagle (Ellis)	T,9 T.6S.,R.1W.	M	Au (Pb)	Vein	Hydrothermal	qz veins, generally less than 1 m thick in Valdez Group slate and graywacke near Tertiary felsic porphyry dikes; the veins contain minor Au, aspy, and gn	Moffit, 1935, P. 29-32
37 Ross	T,9 T.6S.,R.1W.	P	Au (Pb)	Vein, lens	Hydrothermal	Thin qz veins and lenses in siliceous Valdez Group rocks near felsic dikes; the qz contains minor Au, aspy, and gn	Moffit, 1913a, P. 177-178
38 Portland	T,9 Tps.6,7 S.,R.1E.	P	Au	Vein, lens	Hydrothermal	Thin qz veins and lenses in Valdez Group	Moffit, 1913a, P. 177
39 Zeis	T,9 T.7S.,R.1E.	P	Au	Vein, lens	Hydrothermal	Thin qz veins and lenses in Valdez Group	Moffit, 1913a, P. 177
40 Telluride, Wetzler (Quail)	T,9 T.6S.,R.1W.	M	Au (Cu, Pb, Zn)	Vein	Hydrothermal	Numerous thin qz veins in slate and locally sheared graywacke of Valdez Group near Tertiary felsic dikes; the veins contain Au, gn, sl, aspy, and cp; minor production from Wetzler	Moffit, 1913a, P. 180-181; 1935, P. 27-29
41 Quartz Creek	T,9 T.5S.,R.1W.	P	Au (Cu, Pb)	Vein	Hydrothermal	Thin qz veins in sl... folded Valdez Group slate and schistose graywacke	Moffit, 1913..., P. 179-180

42 Bernard (Red) Mountain	T.9 T.4S.,R.1E.	P	Cr (Cu, Ni, Pt)	Massive, disseminated	Magmatic	Layers, lenses, and disseminations of chromite in dunite; minor anomalous concentrations of Pt Group elements, Cu, and Ni in some of the ultramafic and associated rocks	Berg and Cobb, 1967, p. 49, 52; Jasper, 1967a, p. 4; Hoffman, 1974
43 Dust Mountain	U.9 T.3S.,R.3E.	P	Cr (Ni, Pt)	Massive	Magmatic	Chromite-rich lens in dunite; traces of Ni and Pt	Berg and Cobb, 1967, p. 52
44 Willow Mountain	T.9 T.1S.,R.1E.	o	Zn (Cu)	Disseminated	Hydrothermal	Hydrozincite and some cp and ml sparsely but widely distributed in brecciated carbonate rocks	Berg and Cobb, 1967, p. 52
45 Opal, Tiger Mining Co.	U,9 T.4S.,R.4E.	M	Au (Ag, Pb, Zn)	Vein	Hydrothermal	Widely spaced qz veins, generally less than 1 m thick, cutting shist of the Skolai Group and granitic rocks (Jurassic?), the veins contain aspy, py, gn, and sl; recently active probably with minor production	U.S. Geol. Survey, 1976, unpublished data
46 Fivemile Creek	U,9 T.4S.,R.5E.	O	Au, Ag (Pb)	?	?	Reported (Berg and Cobb, 1967, P. 49) lode that contains Au, Ag, and gn; probably in Skolai Group metamorphic rocks	Berg and Cobb, 1967, p. 49
47 Liberty Falls	U,9 T.3S.,R.5E.	P	Mn	Veinlet, lens	Hydrothermal	Lenses that contain manganite-bearing qz veinlets; in chloritic schist of Skolai Group	Berg and Cobb, 1967, p. 49; Jasper, 1967a, p. 4
48 Blackney	U,9 T.5S.,R.6E.	p	Cu	Vein	Hydrothermal	Thin parallel veins that contain py and cp in metavolcanic rock of the Skolai Group near dioritic pluton; similar deposits nearby	Moffit, 1914, p. 51-52
49 Surprise Creek	U,9 T.5S.,R.6E.	p	Cu	Vein, disseminated	Hydrothermal, submarine volcanogenic?	Mineralized zone in brecciated Skolai Group volcanic rocks that contains veins and disseminations of cp, py, chrys, cc and bn; dioritic pluton nearby	Moffit, 1914, p. 42
50 Divide Creek	U,9 T.6S.,R.6E.	p	Cu	Vein, disseminated	Hydrothermal, submarine volcanogenic?	Veins and disseminations that carry cp, bn, cv and ml in fractured Skolai Group greenstone	Moffit, 1914, p. 52
51 Falls Creek	U,9 T.6S.,R.6E.	p	Cu	Disseminated	Submarine volcanogenic	Disseminated bn, cp, and cv in Skolai Group metavolcanic rocks	Moffit, 1914, p. 52
52 Spirit Mountain	U,9 T.6S.,R.6E.	P	Ni, Cu (Co, Pt,Ag)	Massive,	Magmatic	Massive and disseminated sulfides and their alteration products in peridotite and pyroxenite sills that intrude metamorphosed Skolai Group rocks; some granitic and gabbroic intrusives in vicinity; the sulfide minerals include bravoite, pentlandite, po, cp and py; some analyses show fairly abundant As, probably indicative of arsenides, and minor anomalous amounts of Co, Ag, and Pt Group elements, chiefly Pd	Kingston and Miller, 1965; Herreid, 1970

9.	Z',7 T.26S.,R.41E.	O	(Mo, Ag)	Disseminated	Hydrothermal	Altered zone about 75 m wide; contains minor amounts of Ag and Mo	MacKevett and Plafker, 1970, p. L4-L5
10.	Z',7 T.32S.,Rs.41,42E.	P	Fe(Ti)	Disseminated	Placer	Local concentrations of mgt and ilm is black sands	U.S. Bureau of Mines, 1973
11.	Z',7 T.31S.,R.41E.	P	Fe(Ti)	Disseminated	Placer	Local concentrations of mgt and ilm in black sands	U.S. Bureau of Mines, 1973

NOTE: Disseminated pyrite that is locally associated with minor anomalous amounts of copper and silver is widely distributed in some metamorphic rocks, mainly amphibolite, between the Boundary and Art Lewis faults.
Chromium and nickel are minor constituents of small masses of serpentinite along the Boundary fault. Copper-bearing lodes along the Alsek River and Russell Fiord were reported by Blackwelder (1907, p. 86-87), but they were not confirmed during later investigationns.
