Foreword

At 3:30 in the afternoon of October 18, 1867, on the parade ground near Baranov's Castle in Sitka, an area of about 580,000 square miles of Russian territory was formally transferred to the United States; 92 years later this territory, Alaska, became the 49th State of the Union. Alaska extends over an area one-fifth as large as that of the conterminous United States and is unbelievably rich in landscape and other natural resources, but it has comparatively few inhabitants. This, the largest State, also contains other extremes in geography; the highest point (Mount McKinley—20,320 ft.), the northernmost point (Point Barrow— $71^{\circ}23'N$), and relative to the Greenwich meridian, the westernmost point (Amatignak Island— $179^{\circ}10'W$), and the easternmost point (Pochnoi Point— $179^{\circ}46'E$) in the United States.

The discovery of gold in Alaska in the 1890's caused the Geological Survey to undertake geographical exploration and geological and mineral-resource investigations in that remote territory. As the work progressed, the need was recognized for a names dictionary as an aid in preparing and publishing maps and reports on Alaska. In June 1900 Marcus Baker undertook the completion of a dictionary begun in 1892 by the Board on Geographic Names. The first "Geographic Dictionary of Alaska" was pub-

lished in 1902 as Geological Survey Bulletin 187. A second edition, prepared by James McCormick, was published in 1906 as Bulletin 299.

Six decades have passed since the geographic names dictionaries of Baker and McCormick were published. Alaska has now been completely mapped at the scale of 1:250,000 and extensively mapped at the scale of 1:63,360. These maps provide a wealth of geographic-names information. Names in current use, as well as many names formerly in use, have been assembled by Donald J. Orth and his colleagues into a new and greatly enlarged edition of the geographic names dictionary.

Ançhorage—a protected area of water where ships anchor safely.

Area—part of a larger tract of land, especially applicable to parts of cities.

- Barrier beach**—a ridge of sand extending above high tide, parallel to the coastline and separated from it by a lagoon or other body of water.
- Barrier island**—a detached part of a barrier beach between two inlets; an island between an area of sheltered water and the open sea.
- Basin**—a low area enclosed by higher land.

- Bluff**—a high broad-faced bank or cliff cut by lateral erosion of a stream.
- Canal**—a manmade watercourse constructed and maintained primarily for navigation.
- Canyon**—a large steep-walled chasm, gorge, or ravine cut into the earth's surface by water.

- Crossing**—a short stretch of a stream where a boat, following a channel, crosses from one side of the stream to the other. This term is common on the Yukon and Tanana Rivers.
- Delta**—low-lying alluvial deposits at the mouth of a stream over which distributaries of the main stream often flow.
- Distributary** (modifier of stream)—a branch of a stream flowing away from the original stream and not rejoining it; generally on a delta.

² Both й and ы are transliterated as y, but these letters rarely occur initially and the likelihood of confusion is slight; the й generally occurs only as the second part of diphthongs, while the ы occurs before other vowels or between consonants.

³ The Russian letter е is transliterated as ye initially, after vowels, and after ъ and ь; elsewhere as e.

⁴ This system provides no means of distinguishing between the transliterations of the Russian letter ц and the Тс letter combination; however, the latter occurs rarely.

DICTIONARY OF ALASKA PLACE NAMES

By DONALD J. ORTH

INTRODUCTION

This work is an alphabetical list of the geographic names that are now applied and have been applied to places and features of the Alaska landscape. Principal names, compiled from modern maps and charts and printed in boldface type, generally reflect present-day local usage. They conform to the principles of the U.S. Board on Geographic Names for establishing standard names for use on Government maps and in other Government publications. Each name entry gives the present-day spelling along with variant spellings and names; identifies the feature named; presents the origin and history of the name; and, where possible, gives the meaning of an Eskimo, Aleut, Indian, or foreign name. Variant, obsolete, and doubtful names are alphabetically listed and are cross referenced, where necessary, to the principal entries.

Each name entry consists of two paragraphs. The first gives its application and location and presents variant forms. The second paragraph presents the history and meaning of the name.

The order of information in the first paragraph of a name entry is as follows:

Name.—The recommended name, normally conforming to present-day local and map usage in spelling and form.

Designation.—A standardized geographic term identifying the kind of feature named. See glossary of terms.

Population or elevation.—Expressed numerically. Population is determined from the 1960 census or from an earlier census indicated by a date in parentheses after the population number. Elevations are normally given for the summits of mountains, peaks, hills, and passes. For a named mountain range, group of hills, or ridges, the highest elevation is given unless it is more appropriate to express the average summit elevation. Elevations are determined from the most recent maps of the area.

Description.—The application of the name to the feature and its location relative to other and more distinctive features, such as well-known mountains, lakes, or towns. The last part of the description is the name of the physical region in which the feature occurs. (See fig. 1.)

Geographical coordinates.—Latitude and longitude for mouths of streams, canyons, and ravines; for terminal ends of glaciers; for centers of bays, lakes, mountain and hill groups, ridges, and populated places; for summits of mountains, hills, peaks, and passes; and for the extremities of points of land and of some linear features requiring identification of both ends.

Board on Geographic Names decisions.—If the Board has taken action on the name or its application, the year of the most recent decision is given.

Map number.—This number, shown in parentheses, indicates the U.S. Geological Survey 1:250,000-scale quadrangle map on which the named feature or place is shown. (See fig. 2.)

Variant names.—All known variant spellings and other names that have at any time been applied to the entry feature are listed alphabetically.

In the second paragraph of the entries, certain stereotyped phrasing used in the entries should be explained. The phrases “named by” and “name given by” refer to the act of a person or agency applying a new or different name to a feature. The expression “reported by” only means that the name was documented or reported outside the named feature’s locality. The name may have been in use many years before the documentation. The phrase “prospectors’ name” implies that the name giving was associated with the need for locating and filing a mining claim. Prospectors’ names were given arbitrarily and often borrowed from other mining areas.

A Federal agency is referred to by its present official designation, abbreviation, or acronym even though it may have had a different designation at the time mentioned in the Dictionary entry. Exceptions to this rule involve obsolete agencies and those combined with others due to reorganization. The military title of a person refers to the rank he possessed on the date mentioned in the entry.

Where a published reference is not given for historical and quoted information, the information has been obtained from the Alaskan files and records of the U.S. Geological Survey, which date back to 1884. The reasons for giving a new name or changing an old one have been carefully recorded in the entry, in the exact words written by the person or agency responsible. This wording is shown in quotation marks.

Russian names are spelled according to the transliteration system recommended by the Board on Geographic Names. Meanings are given but may not be precise inasmuch as many of the Russian names used words or terms which were peculiar to the Kamchatka area of Siberia more than a hundred years ago, and present-day dictionaries may not give accurate connotations. Russian personal names, however, are given according to the present-day conventional spelling.

FIGURE 1.—Physical regions of Alaska. For another classification, see "Physiographic Divisions of Alaska," by Wahrhaftig (1965).

Native names presented the largest problem in compiling this dictionary. The native languages do not have established written forms, and the transcription of names from Eskimo, Aleut, or Indian into our Roman alphabet (some by way of the Russian Cyrillic alphabet), by nonlinguists, is extremely varied. The only choice was to present the names and their meanings as documented. Wherever possible, spellings based on the orthography recommended by the Board on Geographic Names have been

added in brackets. This orthography, simply stated, is that consonants are pronounced except in a few diphthongs. Care should be taken in accepting the meaning of a native name listed in this dictionary. Often the meaning reported by a fieldman may express the reason for giving the name instead of the denotation of the word or words constituting the name. A real understanding requires knowledge of both the reason for giving a name and the meaning of the name, along with the relationship between the two.

Origin of Names

The second paragraph of a name entry gives the available information concerning the origin (or derivation), history, and meaning of the name. The circumstances involved in the naming of some places are not known. Alaskan geographic names, however, are comparatively new, few being so old or so corrupt that their origins or meanings are wholly concealed. They are derived almost exclusively from six general sources, as follows:

Russian names.—Vitus Bering, sent by Empress Anne of Russia, made landfall on the coast near Mount St. Elias on July 16, 1741, and thus is officially recognized as the discoverer of Alaska. There is evidence, however, that a Russian party landed on the Seward Peninsula as early as 1732. After Bering's discovery, Russian interest centered on the lucrative fur trade, which began with the visits of hunting parties, the promyshlenniki, and evolved into the powerful Russian American Company. The first permanent Russian settlement was established on Three Saints Bay, Kodiak Island, in 1784 and was later moved to St. Paul Harbor in 1792. The first Russian post in southeast Alaska, founded by Alexander Baranov in 1799, was near present-day Sitka. Russian explorations of Alaska, which continued until the purchase by the United States in 1867, was primarily confined to the Aleutians and the southern coastal areas, with some expansion up the Yukon and Kuskokwim Rivers. Thus, the major period of application of Russian names lasted about 125 years. Although many Russian names were translated after the American purchase, several hundred are still applied to Alaskan features.

Spanish names.—Spanish exploration of Alaska was competitive with the Russian exploration. The expeditions sent out by Spain

(or Mexico) were limited for the most part to the south coast, from the southern boundary of Alaska to Prince William Sound. One expedition traveled as far west as Unalaska and named a few points along that coast. In general, names of Spanish origin in Alaska are few and were given between 1774 and 1780; they originated mainly in 1775 and 1779 with the expeditions of Lt. Ignacio Arteaga and Bodega y Quadra. Many Spanish names once applied to the Alaskan landscape have never been widely used because of tardy and obscure publication.

British names.—British naming activity in Alaska began with the 1778 expedition of Capt. James Cook. From time to time during the subsequent 80 years, English traders and naval officers contributed to the knowledge of Alaskan geography, and most of the names of major coastal features can be attributed to them. Noteworthy contributions in the 18th century were made by Captains G. Dixon, J. Meares, and N. Portlock; British fur traders; and especially Capt. George Vancouver, RN, during his extensive exploration and survey of the coast from Kodiak eastward and southward to Dixon Entrance from 1792 to 1794. Vancouver named many features, and because those features were fully described and mapped and the results published, most of the names remain unchanged today. During the 19th century, major contributions were made by Capt. F. Beechey, RN, 1826–27; Sir John Franklin, 1826; Sir Edward Belcher, RN, 1836–42; P. Dease and T. Simpson, factors of the Hudson Bay Company, 1837; and most especially the so-called Franklin search expeditions, 1848–54.

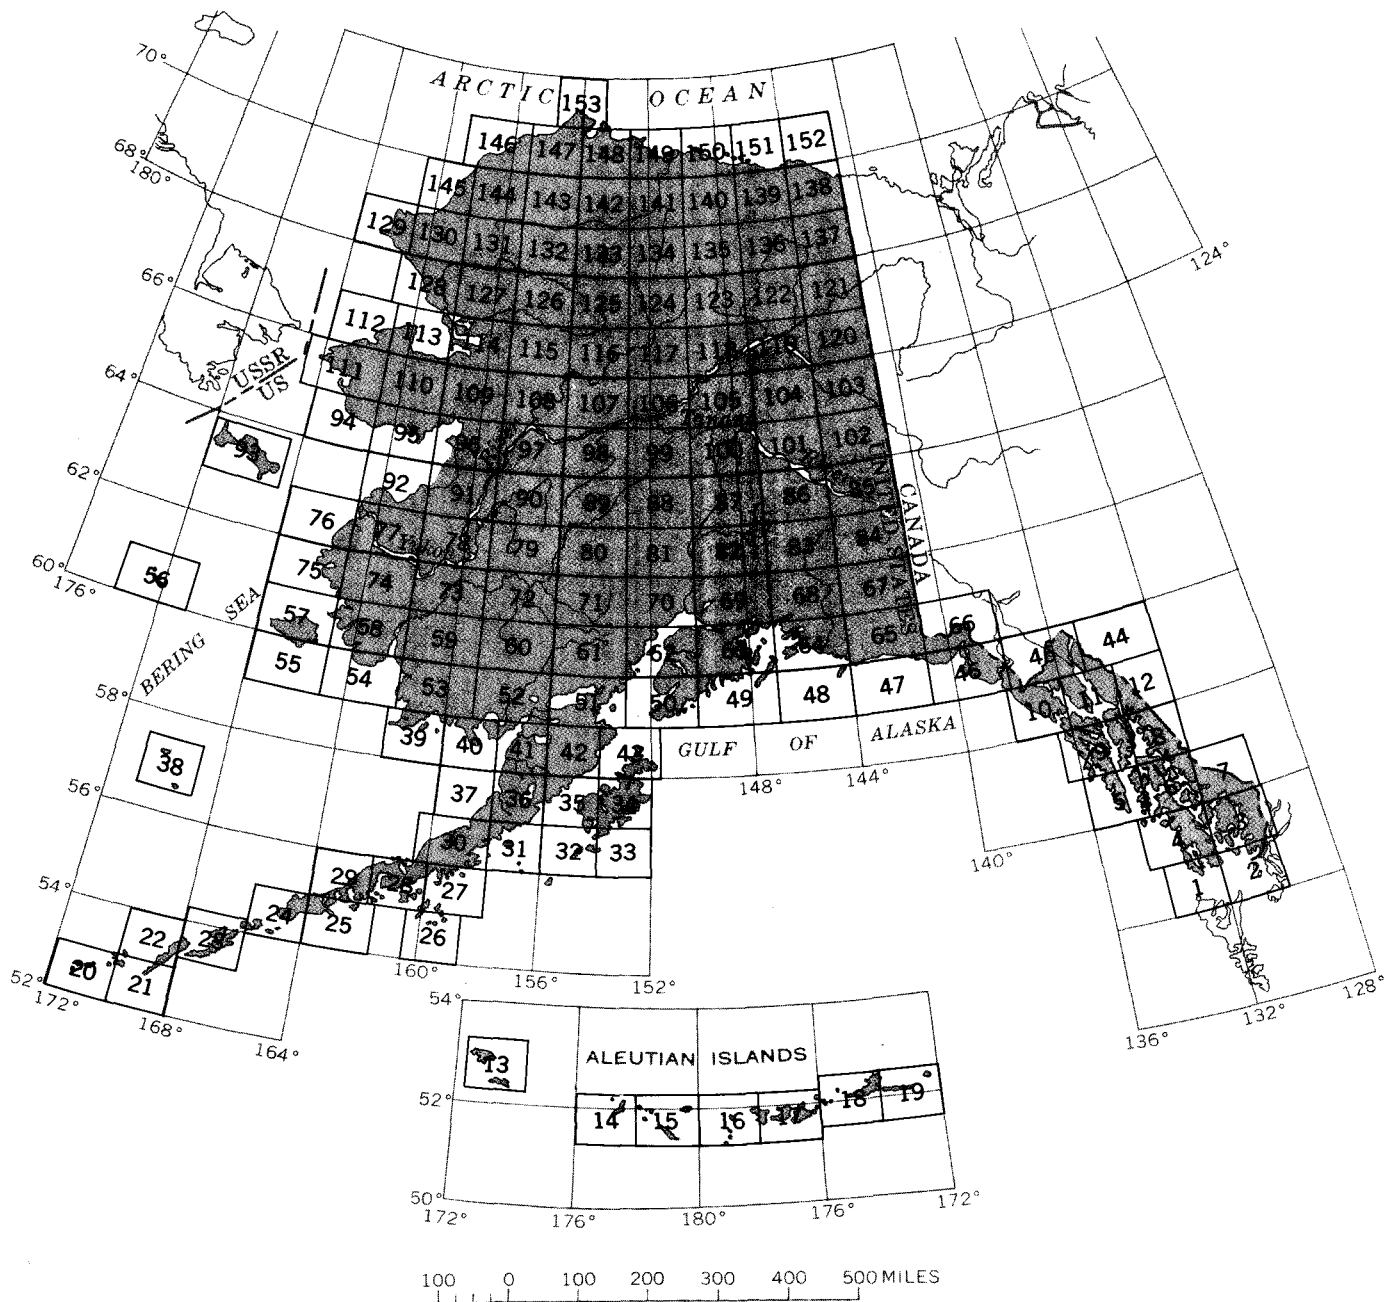

FIGURE 2.—Location of 1:250,000-scale topographic maps.

French names.—The explorations of the French were wholly confined to southeastern Alaska. The ill-fated La Pérouse expedition in 1786 was the only French voyage that contributed names to Alaskan features.

American names.—American whalers first entered the Arctic Ocean through Bering Strait in 1848 and thus began the American contribution to Alaska geographic names which has continued to the present day. The earliest large contribution was made by the U.S. Navy's North Pacific Exploring Expedition of 1855, chiefly in the Aleutian Islands and Bering Sea. Since the

purchase of Alaska in 1867, many official expeditions have explored, surveyed, mapped, and named Alaskan features. The earliest work fell to the U.S. Coast and Geodetic Survey (then Coast Survey), which directed its effort primarily to the Gulf of Alaska littoral. Systematic official exploration of the interior of Alaska began with Lt. F. Schwatka, USA, who made a reconnaissance of the Yukon River from source to mouth in 1883. The Revenue Marine Service, Navy, Army, Bureau of the Census, and several other Federal agencies all contributed significantly throughout Alaska.

Some of the densest concentrations of names in Alaska can be traced directly to the search for and mining of gold. The closing years of the 19th century brought large numbers of prospectors to the northern frontier, and their primary need was for maps and information to guide them through the country. To fulfill this need, the U.S. Geological Survey began a program of exploration and mapping in 1898, and through its topographic and geological work has since become a major force in establishing and documenting Alaskan names.

Native names.—A major contributor of geographic names has been the indigenous people of Alaska. In this work the native peoples have been divided into three linguistic groups—Indian, Eskimo, and Aleut. These divisions are not uniform because Aleut is considered a divergent branch of the Eskimo linguistic stock; however, the grouping is one of historical and geographic convenience. (See fig. 3.) A high percentage of Aleut names was obtained and first recorded by the Russians. The Eskimo occupied most of the Alaskan coast from Kayak Island, near the mouth of the Copper River, to the Canadian boundary on the Arctic coast, except the upper end of Cook Inlet and that part of the Alaska Peninsula which, with the Aleutian Islands, was occupied by the Aleut. The Indian occupied most of the interior and southeastern Alaska; most of the languages are, or are thought to be related to, Athapaskan. The Tsimshian of Annette Island

have migrated from the Skeena River area of British Columbia since 1887. See distribution map of Eskimo, Aleut, and Indian linguistic areas in 1890 (fig. 3).

Eskimo, Aleut, and Indian names, like those of the Europeans, are generally commonplace and descriptive. Native naming habits, however, have two characteristic differences. The natives tend to name many small, even minute, landmark features and ignore those that are large. Few mountains were named unless they stood alone and had some peculiar characteristic. For foot, boat, or sled travel, there was no need to name large and vague features. In addition, the natives commonly applied several names to one feature, based on the characteristics of its particular parts. Many streams, even short ones, had various names along their lengths. Many of the native names now appearing on published maps are long and unpronounceable by the average English-speaking person.

Geographic names evolve historically, their origins and forms being closely associated with the languages of the peoples who successively occupy the area. Thus, many native names are changed or altered in form as a result of adjusting to the new language—English. This is a universal process. However altered, many of these names have become or will become firmly established as part of the native heritage of the Alaska landscape.

Sources of Names

Many published maps, charts, manuscript maps, fieldsheets, name records, books, letters, and persons were consulted in preparing this work. Each entry in this dictionary aims to give reference to the source of the listed name. Source is herein defined as the first documentation of the name and its application. This section lists alphabetically many of the principal sources used in the dictionary. Dates in the boldface headings refer to the time spent on Alaskan or Russian American affairs. Dates

following a person's name in the discussion refer to birth and death years. The source information should be used in conjunction with the "Selected bibliography" given in the dictionary.

Abercrombie, William Ralph: 1884-19?

Capt. William Ralph Abercrombie, 1857-19?, USA, an aide of Gen. N. A. Miles, was selected in 1884 to lead an exploring expedition up the Copper River and across the Alaska Range to

the Yukon River. His attempt to ascend the Copper River was unsuccessful although he was able to survey the Copper River Delta and a portage route to Port Valdez.

Abercrombie returned to Alaska in the spring of 1898 with more than 20 men. The expedition was divided into two parties: one, led by F. C. Schrader, USGS, assisted by Emil Mahlo, topographer, made reconnaissance surveys of the Prince William Sound and Copper River districts, and the other, led by Lt. P. G. Lowe, USA, traversed the trail from Valdez to Mentasta Pass, then to the Yukon via the Fortymile and Sixtymile Rivers. Abercrombie's report was published with that of Capt. E. F. Glenn.

Abercrombie returned to Alaska the following year with instructions to construct a military road from Valdez to Fort Egbert on the Yukon. Accompanying Abercrombie was Oscar Rohn, who made a geologic reconnaissance and topographic survey in the Wrangell Mountains and adjacent areas and provided a report of a route for reaching the interior goldfields of Alaska and Canada. Rohn's report was published in 1900 in the Twenty-first Annual Report of the Geological Survey. Abercrombie's report was published by the U.S. Congress in "Compilation of Narratives of Explorations in Alaska." Abercrombie Mountain in the Valdez area was named for him.

Alaska Road Commission: 1905-56

The Alaska Road Commission was established by the U.S. War Department (later called the U.S. Department of Defense) in 1905 to survey and develop roads, trails, and mail routes between the coast and the mining areas. In 1932 the Alaska Road Commission was transferred to the U.S. Department of the Interior, where it remained until 1956 when its functions were assumed by the Bureau of Public Roads of the U.S. Department of Commerce. A survey of a land route for a mail and pack trail from Fairbanks to Council City on the Seward Peninsula was made during the summer of 1906 under Major Wilds P. Richardson, 1861-1929, USA, president of the Alaska Road Commission.

By 1917 the Alaska Road Commission had made 980 miles of wagon roads, 549 miles of sled roads, and 2,291 miles of trail. The principal wagon road was the Fairbanks-Valdez Road, now known as the Richardson Highway, named for Maj. Richardson. The 371-mile road connected the interior of Alaska with the Pacific Ocean.

In the early 1920's compilation of a series of 13 maps of the region south of Brooks Range was begun. In addition to wagon roads, sled roads, pack trails, and physical features, the maps showed the towns and villages with the latest census population and locations of shelter cabins along the trails. In addition, several reports have been made by the Alaska Road Commission that provide cartographic and toponymic material on Alaska.

Allen, Henry Tureman: 1885

Lt. (later Gen.) Henry Tureman Allen, 1859-1930, USA, graduated from West Point in 1882 and in 1884 was assigned to Sitka as an aide to Gen. Nelson A. Miles. In the summer of 1885 he made a remarkable journey of 1,500 miles with a complement of four men: Pvt. Frederick W. Fickett and Sgt. Cady Robertson, of the Army, and two prospectors, Peder Johnson, who was recruited at Nuchek, and John Bremner, who joined the group at Taral. On March 29 they ascended the Copper River,

made a side trip up the Chitina, and proceeded to the head of the Chitistone. They resumed the voyage up the Copper, then up the Slana and down the Tetlin and Tanana to the Yukon. From there Allen and Fickett portaged to the Kanuti and traveled thence to the Koyukuk, where they proceeded upstream. They returned down the Koyukuk to the Yukon, then portaged to the Unalakleet and traveled down it to St. Michael. Allen named a considerable number of features, and his journey was subsequently praised as one of the greater explorations in the history of North America. The results were published in 1887. Allen Glacier and Mount Allen, near the head of the Tanana River, were named for this distinguished explorer.

Archimandritov: 1848-50

Capt. Archimandritov (cnna) made surveys in the Kenai Peninsula and Kodiak Island areas about 1850 while in command of a Russian American Company(?) vessel. Some of his results were probably used in Tebenkov's atlas; copies of his manuscript maps and charts were used by the Russian American Company. His survey of Port Graham, Cook Inlet, was published as a harbor chart in 1869 by the U.S. Coast and Geodetic Survey. See Tebenkov.

Arey, H. T.: 1901-3. See Marsh.

Arteaga, Don Ignacio: 1779. See Spanish Expeditions.

Bagley, James Warren: 1907-16

James Warren Bagley, 1881-1947, USGS topographer from 1905 to 1918, began his Alaskan career in 1907 in the Yukon-Tanana region. This work continued until 1911 when he began topographic surveys in south-central Alaska, which continued for 5 years. During this period, Bagley experimented with the use of panoramic cameras for mapping.

Baker, Marcus: 1873-80

Marcus Baker, 1849-1903, USC&GS from 1873 to 1886 and USGS from 1886 to 1903. Baker surveyed the Aleutian Islands and the Alaskan coast from Dixon Entrance to Point Belcher on the Arctic coast in 1873, 1874, and 1880 in the party of W. H. Dall. In May 1880, through the courtesy of Capt. L. A. Beardslee, USN, he made a boat journey from Sitka to Chilkat and returned to Sitka. The names given by himself and the U.S. Coast and Geodetic Survey personnel during this period of 7 years are recorded in the 1883 Coast Pilot, which he and W. H. Dall prepared. When working for the U.S. Geological Survey, Baker prepared the first listing of Alaskan names, published in the Twenty-first Annual Report of the U.S. Geological Survey in 1900. This work led directly to the first "Geographic Dictionary of Alaska," published as Bulletin 187 in 1902. Baker began preparation of a second edition but died before its completion. James McCormick, USGS, continued the work, which resulted in the 1906 "Geographic Dictionary of Alaska," published as Bulletin 299.

Barnard, Edward Chester: 1898-1900

Edward Chester Barnard, 1863-1921, USGS, topographer, surveyed the Fortymile River mining area in the summer of 1898 and made surveys on the Seward Peninsula in the summer of 1900. His work in the Fortymile district was published in 1899 on pages 174-177 of Public Resolution 25, U.S. 55th Congress,

second session, titled "Maps and Descriptions of Routes of Exploration in Alaska in 1898," and was also published in 1901 as an atlas sheet of the U.S. Geological Survey titled "Reconnaissances of the Cape Nome and Norton Bay Regions, Alaska, in 1900." His fieldsheets are the sources of over 200 prospectors' names listed in the present dictionary.

Beardslee, Lester Anthony: 1879-80

Capt. (later Rear Adm.) Lester Anthony Beardslee, 1836-1903, USN, in command of the U.S.S. *Jamestown*, was sent to Sitka in 1879 because of the threat of an Indian uprising. Capt. Beardslee attempted to organize the local government, negotiated with the Indians to open Chilkoot Pass, and policed the illegal manufacture of liquor. Among the officers were Lt. (later Rear Adm.) Frederick Martin Symonds, 1846-1926, and Lt. (later Comdr.) Gustavus C. Hanus, 1848-1931, both of whom had worked for the U.S. Coast and Geodetic Survey and were enthusiastic surveyors. The personnel of the *Jamestown* examined much of Alexander Archipelago, and their work increased the geographic knowledge of that area and included the reporting of many new geographic names. A map of Sitka Harbor was made, and was published by the Coast and Geodetic Survey. Beardslee's report was published in 1882. Beardslee's name has been given to a group of islands, a passage, and a river. A bay, island, point of land, and reef have been named for Hanus. A bay and point of land were named for Symonds.

Becker, George Ferdinand: 1895

George Ferdinand Becker, 1847-1919, USGS geologist, accompanied by W. H. Dall and C. W. Purington, visited Alaska in 1895 for the purpose of examining and reporting on its coal and gold resources. Their examination was confined to the south coast from Sitka to Unalaska. It included several localities in the Alexander Archipelago, in the Kodiak and Cook Inlet areas, and along the Alaska Peninsula. The trip ended with a visit to Bogoslof Island.

Beechey, Frederick William: 1826-27

Capt. (later Rear Adm.) Frederick William Beechey, 1796-1856, RN, in command of H.M.S. *Blossom*, was sent from the Pacific Ocean through the Bering Strait to join Sir John Franklin, who was approaching Point Barrow from the east. Capt. Beechey arrived at Kotzebue Sound on July 22, 1826. Sailing north he made surveys along the coast to Point Barrow, the later part of the journey being accomplished by the ship's Mate, Thomas Elson, in an open boat. Beechey left Kotzebue Sound October 13 and passing through Unimak Strait, reached San Francisco on November 7.

He returned to Kotzebue Sound on August 5, 1827, and the remainder of the season was spent in surveys about the Seward Peninsula. He left Alaskan waters in October.

Bering, Ivan Ivanovich: 1728-41

Capt. Comdr. Ivan Ivanovich (Vitus) Bering, 1680-1741, a Dane who entered the Imperial Russian Navy in 1704, is generally credited with the discovery of the American continent in the area now called Alaska. He was originally sent to the east by Peter the Great of Russia in 1728 to determine whether Asia and North America were a continuous landmass. He sailed the

St. Gabriel, and it was on this trip that probably the first non-native name was applied to what is now a part of Alaska, when Bering sighted and named St. Lawrence Island in August 1728. It appears, however, that he did not see any part of the American continent.

In 1741 Bering made his famous voyage of discovery. After a long and involved overland expedition from St. Petersburg, he sailed from Petropavlovsk, Avacha Bay, on June 4 (O.S.), commanding the *St. Peter*, with a crew of 75, accompanied by Capt. Lt. Alexei (Alexsei) Ilich Chirikov (?-1748) commanding the *St. Paul*, with 76 men. With Bering was Georg Wilhelm Steller, 1709-46, naturalist, and sailing with Chirikov was Prof. Delisle (Louis de l'Isle) de la Croyère (?-1741). Both ships sailed eastward together, but on the 20th (O.S.) they were separated by a storm and did not meet again. Bering made landfall, sighting Mount St. Elias on July 16 (O.S.). A few days later he landed Steller on Kayak Island for a few hours and then turned back, touching the Shumagin Islands and sighting several of the Aleutian Islands. He was driven ashore on Bering Island (U.S.S.R.), where he died of scurvy in December, sailing master Sven Waxel assuming command.

Chirikov, after the separation, continued to sail eastward, sighting land in the Alexander Archipelago, probably in the Sitka area, on July 15 (O.S.). On July 18 (O.S.) the first of two boats were sent ashore, the crews of both disappearing without a trace. After several days of waiting, Chirikov was forced to leave, his return taking him near the south end of Kenai Peninsula, near Kodiak Island, and along the Aleutian Islands; he returned to Petropavlovsk in October.

Several features in and adjacent to Alaska are named for Bering and Steller. Chirikov is commemorated by Chirikof Island and Waxel by Waxell Ridge in the Bering Glacier area.

Billings, Joseph: 1790-92

Capt. (later Commodore) Joseph Billings, 1761?-1806, IRN, commanded a Russian exploring and surveying expedition to Alaska in 1790-92. He began his naval career in the Royal Navy and served on the *Discovery* during the expedition of Capt. James Cook, RN, in 1776-79. In 1783, he was assigned to the Imperial Russian Navy, and shortly afterward, in 1784, preparations for his expedition began. Empress Catherine of Russia issued an edict in 1785, officially appointing Billings to command "A Secret Astronomical and Geographical Expedition for navigating the Frozen Sea, describing its Coasts, and ascertaining the Situation of the Islands in the Seas between the two Continents of Asia and America" (Bancroft, 1886, p. 282). Billings' first attempt in 1787 was unsuccessful. He sailed again in 1790 commanding the *Slava Rossii* (*Glory of Russia*) and visited the Aleutian Islands and Kodiak Island before returning. In 1791 he visited the Near Islands, Tanaga, Pribilof, and St. Lawrence Islands, and the Aleutian Islands from Atka to Unalaska.

British Admiralty

The British Admiralty published many charts relating to the early explorations of Alaska. Most of these were compilations from, or reproductions of, other maps previously made under the direction of Captains Cook, Beechey, and Vancouver, Sir John Franklin, and the officers of the Franklin searching expedition, and many were from published Russian charts. Some names on British Admiralty charts have not been traced to any other source, and for such names reference is simply made to the British Admiralty.

Brooks, Alfred Hulse: 1898-1912

Alfred Hulse Brooks, 1871-1924, USGS geologist from 1898 to 1923, first came to Alaska in 1898 as a geologist in the party of W. J. Peters, making geologic studies in the Tanana and White River basins. Again in 1899, with Peter's party, he made a reconnaissance from Pyramid Harbor at the head of Lynn Canal to Eagle on the Yukon River. He spent the summer season of 1900 on Seward Peninsula, his assistants being George Burr Richardson, 1872-1949, USGS geologist, and A. J. Collier. In 1901 he made a geologic examination of the Ketchikan mining district, southeastern Alaska, and a more hasty reconnaissance of the northern belt of southeastern Alaska.

In 1902 Brooks conducted an exploring expedition, including seven men and 20 pack horses, from the head of Cook Inlet to Rampart, on the Yukon, with D. L. Reaburn, topographer, and L. M. Prindle, geologic assistant. From Tyonek, on Cook Inlet, the route lay northwest across the Skwentna River to the Kitchatna, up this stream and through Rainy Pass, down the Kuskokwim River a short distance, and then northeast 200 miles along the northwest base of the Alaska Range to the Kantishna River drainage. From there they traveled northwest, then north along the 149th meridian across the Tanana and Tolovana Rivers, to Rampart, on the Yukon.

In 1903 Brooks was placed in charge of the U.S. Geological Survey division of Alaskan mineral resources and later became Chief Alaskan Geologist. For reports on his work, see bibliography. His early work was published in the Twentieth Annual Report of the Geological Survey (Pt. 7, p. 425-494) and in the Twenty-first Annual Report (Pt. 2, p. 331-391). The report on the work of 1900 on Seward Peninsula was in a separate publication of the Geological Survey (1901, p. 1-180), titled "Reconnaissances of the Cape Nome and Norton Bay Regions, Alaska, in 1900." The report for 1901 was published as Geological Survey Professional Paper 1 (1902). The report on the 1902 expedition may be found in the Twenty-second Annual Report of the Geological Survey (Pt. 3, p. 515-571).

Brooks was vice chairman of the Alaska Railroad Commission in 1911-12 and chief geologist of the American Expeditionary Force during World War I. Brooks is commemorated in Alaska by the Brooks Range and Mount Brooks in the Alaska Range.

Caamaño, Don Jacinto: 1792

Lt. Don Jacinto Caamaño was sent in 1792 by the Viceroy of Mexico, Count de Revilla Gigedo, in the corvette *Aranzazu*, to explore the northwest coast of North America from the Strait of Juan de Fuca northward. He left Mexico March 20, 1792, arrived in Bucareli Bay July 12, surveyed southward along the coasts of Alaska and British Columbia, and returned to Mexico February 6, 1793. Capt. George Vancouver, RN, met Caamaño in the field and apparently obtained copies of some of his maps, especially of places north of Dixon Entrance, which were incorporated in Vancouver's work. (See fig. 4.)

Cantwell, John C.: 1884-1901

Lt. John C. Cantwell, USRCS, was taken to Cape Krusenstern in 1884 by Capt. Michael A. Healy, USN, commander of the revenue cutter *Corwin*. Cantwell, preceding by a few days the naval expedition of Lt. G. M. Stoney, ascended the Kobuk River about 185 miles. On his return he explored Selawik Lake and vicinity. Cantwell repeated his journey in 1885, traveling up the Kobuk to Walker Lake, which he named. Also disembarking from the *Corwin* in the summer of 1885 was 2d Asst. Eng. S. B. McLenegan, USRCS, who with one man explored about 250 miles up the Noatak. Reports of Cantwell's and McLenegan's 1885 explorations were published in 1889 and 1887, respectively, under the authorship of Capt. Healy.

In the summers of 1899, 1900, and 1901, Cantwell commanded the revenue steamer *Nunivak* on the Yukon River, and he wintered at the mouth of the Dall River during these years. From information gathered while on this duty, including a reconnaissance of the Dall River-Koyukuk Trail by 3d Lt. Eugene Blake, USRCS, and a reconnaissance of the Koyukuk River by 2d Lt. B. H. Camden, USRCS, sketch charts of the Yukon and Koyukuk Rivers were constructed but were not published. Cantwell's report of the cruises of the *Nunivak* was published in 1902.

Capps, Stephan Reid: 1908-36

Stephan Reid Capps, 1881-1949, USGS geologist from 1907 to 1945, began his geological surveys in Alaska in 1908 and continued his Alaskan studies throughout the southern part of the State until 1936.

Carter, F. G.: 1901-3. See Marsh.

Chapin, Theodore Sheffield: 1910-19?

Theodore Sheffield Chapin, 1876-19?, USGS geologist from 1910 to 1920, did geological surveys in the southeast quarter of the State, including the Yukon-Tanana, Nelchina-Susitna, Bremner, Seward Peninsula, and Ketchikan regions.

Chernov, Ivan: 1832-38

Ivan Chernov, ?-1877, was a Russian American Company pilot who made various surveys in the Aleutian Islands in the early 1830's. These surveys were primarily at Amlia Island in the Andreanof group, and in the Rat Island group. Chernov, a creole, was given by the Indians to the Russians in 1804 as a hostage and was returned in 1805. During this year he was sent to the Russian navigation school at Sitka, after which he began a long period of service with the Russian American Company.

Some of the results of his surveys were incorporated in Russian Hydrographic Department Charts 1378 and 1400. Chernof Cape, on the north coast of Kodiak Island, was named for this navigator.

Chirikov, Alexei Ilich: 1741–42. See Bering.

Clerke, Charles: 1778. See Cook.

Clover, Richardson: 1885

Lt. Comdr. (later Rear Adm.) Richardson Clover, 1846–1919, USN, commanding the U.S. Coast and Geodetic Survey steamer *Patterson*, made surveys in the south end of the Alexander Archipelago in the summer of 1885. Extracts from his reports were published in the Coast and Geodetic Survey Annual Report for 1886. A bay, an island, a passage, and a point of land have been named for Clover.

Coghlan, Joseph Bullock: 1884

Comdr. (later Rear Adm.) Joseph Bullock Coghlan, 1844–1908, USN, commanded the U.S.S. *Adams* in southeast Alaska in the summer of 1884. He surveyed the interior passages north and east from Sitka Sound, through Peril Strait to Chatham Strait, and in and about Barlow Cove at the south end of Lynn Canal. The results of this work were incorporated on U.S. Coast and Geodetic Survey Charts 727 and 728, published in 1885. An island in the Alexander Archipelago was named for Coghlan in 1885.

Collier, Arthur James: 1900–1904

Arthur James Collier, 1866–1939, USGS geologist, began his Alaskan work as assistant to A. H. Brooks in the Cape Nome region, Seward Peninsula, in 1900. An account of this work was published as a U.S. Geological Survey special report, "Reconnaissance of the Cape Nome and Norton Bay Regions, Alaska, 1900." The notes on climate and vegetation in that report were written by Collier.

He returned to the Seward Peninsula in 1901 as geologist with T. G. Gerdine's party. In 1902 Collier, with two assistants, made an examination of the coal deposits along the Yukon River from Dawson to the delta. Collier's fieldsheets along the Yukon River were the source of numerous names for the present dictionary.

In 1903 Collier, with F. L. Hess as assistant, returned to the Seward Peninsula in order to continue mineral-resource investigations and visited nearly all placer-mining camps on the peninsula. He also examined the tin deposits in the York region. In 1904 he spent 46 days making supplementary observations on the gold and tin deposits of the Seward Peninsula, and he then spent a month making a reconnaissance of the Cape Lisburne coal deposits. Collier also made a geologic and topographic survey along the coast and several miles inland, from Cape Beaufort to Cape Thompson, a distance of 140 miles. An account of these operations may be found in the Twenty-sixth Annual Report of the Geological Survey, 1905. Collier's fieldsheets of the reconnaissance were the source of some Eskimo geographic names.

Colnett, James: 1789. See Meares.

Cook, James: 1778

Capt. James Cook, RN, 1728–79, went to sea as an apprenticed seaman and entered the Royal Navy at the age of 27. He rose in

rank by merit and was sent on two scientific expeditions—the first to the South Pacific in 1768–71 and the second to Antarctica in 1772–75.

In July 1776 the British Admiralty instructed Capt. Cook to proceed with Capt. Charles Clerke, RN, to the northwest coast of North America and from there north in an attempt to find a passage by sea from the Pacific to the Atlantic. Cook commanded the *Resolution* and Clerke the *Discovery*. The ships sailed from Plymouth to Cape of Good Hope, New Zealand, Tahiti, the Hawaiian Islands, and Nootka Sound in Vancouver Island, arriving March 30, 1778. From then until October 3, 1778, Cook cruised northward and westward along the North American coast to Icy Cape, in the Arctic Ocean, and sketched the chief outlines of this coast, heretofore practically unknown. During this trip Cook applied names to numerous features that were discovered. Leaving Unalaska on October 27, 1778, he returned to the Hawaiian Islands where he was killed by the natives on February 14, 1779. The two vessels later returned to the northwest coast of North America for additional exploration but, being unable to find a northwest passage, turned south and sailed for England, arriving there on October 4, 1780. The British Admiralty published in 1784–85 an account of this voyage in three volumes and a large atlas. Cook is commemorated in Alaska by Cook Inlet and Mount Cook.

Coxe, William: 1780

William Coxe (later Reverend, Archdeacon of Wilts), an English scholar, visited the Russian court in St. Petersburg and was given permission by Empress Catherine to search the archives and study the records of the early Russian discoveries made between Asia and America from 1741 to 1780. The result of his research was published in 1780 under the title "Account of the Russian Discoveries between Asia and America." The third edition of this work, published in London in 1787, was frequently used in the preparation of this dictionary in connection with early naming in the Aleutian Islands, Alaska Peninsula, and Kodiak Island.

Dall, William Healey: 1865–99

William Healey Dall, 1845–1927, first went to Alaska in 1865 in the employment of the Western Union Telegraph Expedition. In 1867 Dall succeeded Robert Kennicott as director of the scientific corps of the Western Union Expedition. He returned to the United States in 1868 and wrote "Alaska and its Resources," which was published in 1870.

In 1871 Dall was appointed Acting Assistant of the U.S. Coast Survey (later U.S. Coast and Geodetic Survey). Aboard the *Humboldt* in 1871 and 1872 and the *Yukon* in 1873 and 1874, Dall made reconnaissance surveys along the coast from Sitka westward to Attu at the end of the Aleutians and northward in the Bering Sea as far as Nunivak and the Pribilof Islands. Mark Walrod Harrington assisted Dall in 1871–72. Dall returned to Washington, D.C., at the end of 1874 in order to write the 1879 Coast Pilot and its appendix, with the assistance of Marcus Baker.

In 1880 Dall again returned to Alaska aboard the *Yukon* and cruised along the coast from Sitka to Unalaska and northward

nearly to Point Barrow. The result of this trip was a series of some 50 charts and plans published by the Coast and Geodetic Survey as well as the 1883 Coast Pilot and its appendix.

In 1884 Dall resigned from the Coast and Geodetic Survey and began work with the U.S. Geological Survey as a paleontologist detailed to the U.S. National Museum where he was curator of the Division of Mollusks and Tertiary Fossils until his death. In 1895 he returned to Alaska accompanied by G. F. Becker and C. W. Purington for the purpose of studying and reporting on coal and gold resources. In 1899 he returned to Alaska with the Harriman Expedition.

Dall reported a large number of names in Alaska in his early publications and is also credited with giving a considerable number of names. In commemoration of this distinguished person, Mount Dall in the Alaska Range and Dall Island in southeastern Alaska, as well as several other features in Alaska, were named for him.

Davidov, Gavril Ivanovich: 1803

Two Russian naval officers, Gavril Ivanovich Davidov, 1784–1809, IRN, and Lt. Nikolai Alexandrovich Khvostov, 1776–1809, IRN, traveled from St. Petersburg to Sitka in 1802–4 for the purpose of scientific research along the Aleutian Islands and Kodiak Island and in the Cook Inlet area. This voyage was undertaken with their Government's permission under the auspices of the Russian American Company. Davidov wrote an account of the journey, including descriptions of the places visited, which was published in two volumes in St. Petersburg in 1810 and 1812.

Davidson, George: 1867–69

Assistant George Davidson, 1825–1911, went to Alaska prior to its purchase by the United States aboard the revenue cutter *Lincoln*. He did reconnaissance work off the coast while the final negotiations were underway, making observations at Sitka, Chilkat, Kodiak, and Unalaska. His report was published in the U.S. Coast and Geodetic Survey Annual Report for 1867 and separately as "Coast Pilot of Alaska, First Part, from Southern Boundary to Cook's Inlet." Davidson also provided material for charts of Sitka, St. Paul Harbor, Kodiak, and Captains Bay on Unalaska Island, which were published by the Coast and Geodetic Survey in 1869.

Davidson returned to Alaska in 1869 to do further reconnaissance surveying in the Alexander Archipelago. While in the Chilkat River valley, he observed the total solar eclipse on August 7, 1869. Subsequently, he returned to the United States where he worked with G. R. Putnam and others until his separation from the Coast and Geodetic Survey in 1895. Several features in Alaska were named for this scientist.

Dickins, Edmund Finlay: 1899–1905

Assistant Edmund Finlay Dickins, USC&GS, was in command of the U.S. Coast and Geodetic Survey steamer *Gedney* from 1899 to 1905. In 1899 he connected the triangulation surveys of Chatham and Sumner Straits. In 1901–2, Dickins joined J. F. Pratt in making hydrographic and topographic surveys in the Alexander Archipelago from Chatham Strait to Inian Islands,

and in 1903–4 he did survey work in the Davidson Inlet and Iphigenia Bay area. The surveys extended from Moira Sound to bays on Prince of Wales Island. His reports were published by the Coast and Geodetic Survey in its annual reports in 1900 and 1902–4 and incorporated onto the charts.

Their explorations extended from the head of Cook Inlet up the Susitna to about the north boundary of present Mount McKinley National Park. Both men are commemorated by features such as Mount Eldridge and Muldrow Glacier, in the Mount McKinley region.

Elliott, Henry Wood: 1872–76

Henry Wood Elliott, 1846–1930, a naturalist, was chosen as a member of the scientific corps of the 1865–67 Western Union Telegraphic Expedition but served solely in Canada. In 1872 he was appointed assistant agent of the U.S. Treasury Department for the Pribilof Islands. He remained in this position the following year. In 1874, aboard the revenue cutter *Reliance*, under command of Capt. Baker (cnna), Elliott and Lt. Washburn Maynard, USN, visited the Pribilof Islands and the islands of Sitka, Kodiak, Unalaska, St. Matthew, and St. Lawrence. His reports were published in 1875 and 1876. He also wrote a monograph on the Pribilof Islands, which was published in the 10th Census, in 1880, and as separate editions in 1881 and 1882. Included in the monograph were two maps of Pribilof Islands made in 1874 by Elliott and Maynard. Many names were obtained from these maps and text for the present dictionary.

Erickson Hjalmar: 1900–1902

First Lt. Hjalmar Erickson, USA, was "selected for the duty of exploring and locating the most feasible route for a military road from Camp Rampart [Rampart], or some point in the

vicinity, to Fort Egbert [Eagle], Alaska, southward of the Yukon Flats * * *." Following this official order Erickson, assisted by William Yanert, a civilian employee of the U.S. Army Signal Corps, left St. Michael in August 1900 and spent several months exploring and mapping the area between Rampart and Eagle on the south side of the Yukon River. The sketch maps made by the expedition furnished many new prospectors' names. Erickson recommended against a road and recommended the construction of a telegraph line instead.

Etolin, Adolph Karlovich: 1818-45

Capt. Adolph Karlovich Etolin, IRN, was governor of the Russian American colonies from 1841 to 1845. In 1822-24 Etolin, with Kromchenko (cnna), IRN, participated in one of the principal expeditions of the Russian American Company, exploring and surveying the Bering Sea coast. During this expedition detailed surveys of the coast, from Bristol Bay to the mouth of the Kuskokwim River, and of Norton Sound, were made. Tamgas Harbor and Kaigani Strait were surveyed by Etolin in 1833, and the results were published in 1848 on Russian Hydrographic Department Chart 1396. In 1839 Etolin, in command of the Russian American Company ship *Nikolai*, sailed from Russia to the colonies, assuming the duties of governor in 1841. He is commemorated in Alaska by Etolin Island in southeast Alaska and by Etolin Strait in the Bering Sea.

Faris, Robert Lee: 1898-1901

Assistant Robert Lee Faris, 1868-1932, USC&GS, accompanied Assistant J. F. Pratt, USC&GS, in 1898-1900. During this period Faris, in charge of a subparty, made surveys in the vicinity of the Yukon River Delta, the results of which were incorporated in U.S. Coast and Geodetic Survey Charts 9370 and 9373. In 1901 Faris accompanied Assistant Ferdinand Westdahl, USC&GS, during the survey of the Sannak Islands off the south end of the Alaska Peninsula.

Fassett, Henry Clifford: 1900-1919

Henry Clifford Fassett, USBF, worked in Alaska from 1900 until 1919. While on the U.S. Fish Commission steamer *Albatross*, under command of Lt. Comdr. Moser, USN, in 1900-01, he made studies of the southern coast of Alaska from Dixon Entrance to Nushagak Bay. In 1903, Fassett continued his research on the *Albatross* under the command of Lt. F. Swift, USN. In his reports he described the early canning industry at Karluk and dredging operations at several places along the Alaskan coast. He also sketched several maps, on which he reported native names in the areas he visited. Fassett Glacier and Fassett Point were named for him.

Gerald FitzGerald, 1898- , USGS topographer from 1917 to 1957, did his first work in Alaska in 1921 in the Iniskin oil field on Cook Inlet. He spent four seasons, from 1923 to 1926, as topographer with field parties exploring the newly established Naval Petroleum Reserve 4 in northwestern Alaska. FitzGerald's fieldsheets represent the first documentation of some Eskimo names and new names given by the field parties. He also did topographic surveys in southwest Alaska. He was Chief Alaskan

Topographer, 1938-42, and Chief Topographic Engineer, 1947-57, for the U.S. Geological Survey.

Flemer, John Adolph: 1898-1905

Assistant John Adolph Flemer, USC&GS, went to Alaska with Assistant John Nelson, USC&GS, in 1898 to make a topographic reconnaissance survey of the region near Lynn Canal. While there, in 1898-99, he cooperated with the Canadians in taking terrestrial photos from high places and utilizing them in surveys along the boundary. His reports appeared in the U.S. Coast and Geodetic Survey Annual Report for 1899, and the information provided by the surveys was applied to the charts of the area.

Flemer also participated in the boundary surveys in southeastern Alaska in 1903-05 under the Alaska Boundary Tribunal.

Franklin, Sir John: 1826

Sir John Franklin, 1786-1847, RN, English Arctic explorer, made explorations along the Arctic coast of Alaska in July and August 1826. He planned to meet Capt. F. W. Beechey, RN, at or near Point Barrow and thus complete the exploration of the coast of northwest North America. After wintering at Fort Franklin (in Canada), Sir John descended the Mackenzie River to its mouth and traveled by small boat westward along the coast into Alaska as far as Beechey Point, where he turned back owing to the lateness of the season. Franklin and his crew disappeared on an expedition in northern Canada in 1847. The search for the missing expedition motivated intense exploration of the northern Alaskan coastline. See Franklin Searching Expeditions.

Franklin Searching Expeditions: 1849-54

Numerous Arctic expeditions were sent out by the British Government in search of Sir John Franklin's party. The first began July 25, 1849, when Lt. W. J. Pullen, RN, accompanied by Lt. W. H. Hooper, RN, led a party of four boats and 25 men from Comdr. T. E. L. Moore's, RN, ship *Plover* on a traverse of the Arctic coast from Wainwright Inlet to Fort Simpson on the Mackenzie River; they reached Fort Simpson October 3. Both Pullen and Hooper's accounts were published.

Several other expeditions followed. In the summer of 1850 Moore made a boat journey from a locality south of Point Barrow to Cape Simpson. He is credited with the naming of the eastern four of the Plover Islands after his ship and the naming of several other islands for his officers. Capt. Robert McClure, RN, in command of the *Investigator*, passed Point Barrow on August 5, 1850, and Flaxman Island on the 18th, but was lost in fog and snow until the 21st, when the ship approached the Mackenzie River.

Capt. Richard Collinson, RN, commander of the *Enterprise*, passed Point Barrow in July 1851 and made observations along the coast, wintered 2 years in British territory, started his return trip in September 1853, and on the 26th was frozen in for the winter. Collinson and his men made several attempts to explore the region. On July 10, 1854, Lt. Jago left the *Enterprise* in a whaleboat for Point Barrow, where he arrived July 24. The *Enterprise* broke free July 16, but because of the ice was not able to reach Point Barrow until August 8.

Comdr. Rochfort Maguire, RN, of the *Plover*, wintered in Moore Harbor, Elson Lagoon, between 1852 and 1854 and made several trips yielding geographical information which was incor-

porated in the charts made by Master Thomas Hull. Maguire and his ship's surgeon, John Simpson, are credited with naming and reporting Eskimo names for a number of Arctic features. Simpson recorded considerable information about the Eskimo of northern Alaska and was responsible for drawing a map of the north coast between Point Barrow and Humphreys Point on the basis of information given by Eskimos.

Accounts of these expeditions were published in the 1850's in various publications. The reports and papers published by Great Britain were used in the compilation of the present dictionary.

General Land Office: 1899-

The General Land Office was established in 1812 as part of the U.S. Treasury Department. It was transferred in 1849 to the newly created U.S. Department of the Interior. In 1946, the General Land Office, the Grazing Service, and the Surveyor General's Office were combined to form the U.S. Bureau of Land Management.

The General Land Office first worked in Alaska in 1897 when the office of Surveyor General of the District of Alaska was created. The first Surveyor General was William L. Distin, who served until 1914. The establishment of the Copper River meridian and base line in 1905 was the beginning of the rectangular system of surveys in Alaska.

In 1910, Congress appropriated \$100,000 for subdivision surveys of public lands in Alaska. With the cooperation of the U.S. Geological Survey, the General Land Office initiated work in the vicinity of Fairbanks under the direction of R. H. Sargent, USGS. The U.S. Coast and Geodetic Survey provided precise astronomical observations for latitude, longitude, and azimuth at Fairbanks, Tanana, and Copper Center. In 1915, 15 field parties were organized to extend the cadastral surveys to the Bering River, Matanuska, and Nenana coal fields, opened in 1914. At the same time the rectangular surveys were extended to the widely separated areas in the Cook Inlet district, along The Alaska Railroad, and to Haines. The townsites of Douglas, Eska, Fairbanks, Haines, and Sitka were surveyed during this period.

By 1922, 1,550,000 acres were surveyed in Alaska. During the next two decades surveys were expanded on the Alaska and Kenai Peninsulas, and the survey of Mount McKinley National Park was completed; thus, 2,500,000 acres had been surveyed by 1940.

At the close of World War II and after the conflict in Korea, surveying activity greatly increased with the influx of homesteaders. The achievement of statehood in 1959 and the subsequent transfer of public lands to the State of Alaska, as well as the discovery of oil, have led to increased surveying. By 1966, 11,440,000 acres in Alaska had been surveyed by the Bureau of Land Management. Over the years the surveyors have reported names when they found them and have given names where needed.

Geoghegan, Richard Henry: 1902-43

Richard Henry Geoghegan, 1866-1943, linguist and master of many languages including Gaelic, Greek, and Chinese, was born in Ireland, studied at Oxford University in England, and came to Alaska as a court reporter under James Wickersham, who was then U.S. district judge. Geoghegan became interested in Alaskan native languages and is primarily known for his translations, from Russian, of Father Ioann Veniaminov's Aleut and Tlingit vocabu-

laries. Both he and his brother, James T. Geoghegan, who also came to Alaska, collected word lists of various Indian tribes that included geographic names. Most of his manuscript material is at the University of Alaska and at the State Historical Library.

Gerdine, Thomas Golding: 1899-1907

Thomas Golding Gerdine, 1872-1930, USGS topographer, worked in 1899 in F. C. Schrader's party on the Chandalar and Koyukuk Rivers. Gerdine was in general charge of all topographic surveys in Alaska from 1902 until 1907, under A. H. Brooks, Chief Alaskan Geologist. In 1908 he became Pacific Region Engineer for the U.S. Geological Survey. Gerdine is commemorated in Alaska by Mount Gerdine.

Gilbert, John Jacob: 1900-1901

Assistant John Jacob Gilbert, USC&GS, commanded the U.S. Coast and Geodetic Survey steamer *Pathfinder* in 1900-1901. In 1900 he surveyed the shore of Norton Sound from St. Michael Harbor to Golovnin Bay. The following year he surveyed the Fox Islands and the passes between the eastern Aleutian Islands between Unalaska and Unimak Islands. These surveys were included in new charts published by the Coast and Geodetic Survey for the Norton Sound and Fox Island areas. Gilbert's reports were published by the Coast and Geodetic Survey in 1901 and 1902.

Glass, Henry: 1881

Comdr. (later Rear Adm.) Henry Glass, 1844-1908, USN, in command of the U.S.S. *Wachusett*, succeeded Capt. L. A. Beardslee at the Sitka station in 1881. The surveying done by Symonds and Hanus under Beardslee was continued under Glass and was published by the U.S. Coast and Geodetic Survey. A peninsula and point of land were named for Glass.

Glenn, Edwin Forbes: 1898-99

Capt. (later Maj. Gen.) Edwin Forbes Glenn, 1857-1926, USA, was ordered in 1898 to establish a camp at Port Wells, Prince William Sound, and explore for routes to the Copper and Susitna Rivers. He was then to proceed to Cook Inlet and explore for routes to the Tanana. Accompanying Glenn was W. C. Mendenhall, USGS, who made geologic and topographic reconnaissance from Resurrection Bay to the Tanana. Also in the party were Lt. J. C. Castner, USA, who reached the Yukon via Lake Louise and the Delta and Tanana Rivers, and Sgt. William Yanert, USA, who explored the headwaters of the Susitna. The results of this series of ventures was published with those of Capt. W. R. Abercrombie, USA. In 1899 Glenn returned to continue his explorations of the previous year. Mount Glenn in the Chugach Mountains was named for him.

Glotov, Stephen: 1763-66

Stephen Glotov, Russian fur trader, was the first to visit and trade peacefully with the natives of Umnak and Unalaska Islands during his voyage of 1758-62 on the ship *Yulian*, which he commanded. His second voyage, in command of the *Andreian i Natalia*, in 1762-65 was one of the most important of the early

expeditions to the Aleutian Islands in that it marked the turning point of the free lance customs of the Promyshleniki (fur hunters). Glotov traveled as far east as Kodiak Island, landing on September 8, 1763, and probably was the first European to visit this island. For a further account of his travels, see Bancroft (1886) and Coxe (1787).

Grant, Ulysses Sherman: 1905-10

Ulysses Sherman Grant, 1867-1932, USGS geologist from 1904 to 1925, did geological investigations in the Prince William Sound and Kenai Peninsula area. He is credited with the naming and reporting of many names in that area.

Grewingk, Constantin: 1850

In 1850 Dr. Constantin Grewingk, 1819-87, published a "Contribution to the Knowledge of the Orography and Geography of the Northwest Coast of America and Neighboring Islands" in German. In this article Grewingk reported many names which have been used in this dictionary. Grewingk Glacier, on the Kenai Peninsula, was named for this writer.

Griggs, Robert Fiske: 1915-30

Robert Fiske Griggs, 1881-1962, botanist, was chosen director of six National Geographic Society Mount Katmai expeditions in 1915-19 and 1930, during which he named nearly 50 geographic features in the Katmai region. He was commemorated by the naming of Mount Griggs in Katmai National Monument.

Hamilton, Ernest G.: 1904-5

Ernest G. Hamilton, USGS topographer, worked with F. H. Moffit, geologist, on the Kenai Peninsula in 1904 and with G. C. Martin, geologist, mapping the Controller Bay area in 1905.

Harriman Alaska Expedition: 1899

In the summer of 1899 Edward Henry Harriman, 1848-1909, of New York, chartered the steamer *George W. Elder* and, inviting about 30 scientific men, sailed to Alaska. Many of the guests did some exploration, carried out surveys, collected specimens, and took photographs. The Harriman Alaska Expedition cruised 9,000 miles with about 50 stops; it left Seattle on July 1 and returned August 31. The results of the expedition were published in 12 volumes. The expedition named several geographic features, including Harriman Fiord and Harriman Glacier in the Chugach Mountains region.

Hayes, Charles Willard: 1891

Charles Willard Hayes, 1859-1916, USGS geologist from 1887 to 1911, was detailed to accompany an expedition led by Lt. Frederick Schwatka, organized by a syndicate of newspapers, to explore the region lying between Lynn Canal and the Copper River. The route followed up Taku Inlet, down the Teslin and Lewes, up the White, over Skolai Pass, and down the Chitina and Copper. Several new names were added to Alaskan maps by this expedition. Hayes made the first classification of Alaskan physiographic provinces. Several features in Alaska are named for him.

Helm, James M.: 1886. See Snow.

Herron, Joseph Sutherland: 1899

The most notable part of Capt. E. F. Glenn's 1899 exploration was that conducted by Lt. Joseph Sutherland Herron, 1869-19?, USA.

He explored the portage between Passage Canal and Prince William Sound and the area around Turnagain Arm on Cook Inlet and joined Glenn at Tyonek. Herron then proceeded up the Kichatna River, across the Alaska Range to the headwaters of the Kuskokwim drainage, then to the Cosna, Tanana, and Yukon Rivers.

Hess, Frank Lee: 1903-5

Frank Lee Hess, 1871-1955, USGS geologist from 1903 to 1925, began his Alaska work as assistant to A. J. Collier on the Seward Peninsula in 1903. In 1904, as assistant to L. M. Prindle, he made a geological reconnaissance from Eagle to Rampart via Fairbanks. In 1905, assisting F. H. Moffit, Hess helped make a detailed geological survey of the area adjacent to Cape Nome on the Seward Peninsula.

Capt. Calvin Leighton Hooper, 1842-1900, USRCS, spent a number of years in Alaska during the period of early exploration and in later years was Commander of the Bering Sea fleet. His annual reports to the U.S. Treasury Department contributed many geographical facts. Hooper Bay in the Yukon River Delta was named for him.

Howard, William Lauriston: 1885-86. See Stoney.

Ilin, Peter Ivanovich: 1818-42

Staff Capt. Peter Ivanovich Ilin, IRN, of the Pilot Corps, first sailed to the Russian American colonies in 1817 with Capt. Vasili M. Golovnin, IRN, on the *Kamchatka*. On an unknown date Ilin is believed to have surveyed a bay on the western side of Chichagof Island, and his sketch of the bay was published in the 1826 Sarichev atlas on map 28. He died in 1842 in Okhotsk (or Kamchatka). Ilin Bay, on the west side of Chichagof Island, was named for this navigator by his countrymen.

Ingenstrem: 1829-32

Ingenstrem (cnna) was a Russian American Company pilot who made various surveys on Atka and Amlia Islands in the Andreanof group of Aleutian Islands in the late 1820's. In 1830-32, with Ivan Chernov, he made surveys in the Prince William Sound area and at the mouth of the Kenai River, Cook Inlet. His results were used in 1836 by Capt. F. P. Lutke, IRN; in 1852 by Capt. M. D. Tebenkov, IRN; and in 1848 by the Russian Hydrographic Department on Chart 1400. The Ingenstrem Rocks, in the western Aleutians, were named for this navigator by his countrymen.

International Boundary Commission

In 1903 the Alaska Boundary Tribunal, established between Great Britain and the United States, negotiated the Alaska-Canada boundary southeast of longitude 141° W. On the basis of these negotiations, the International Boundary Commission was established by treaties between Great Britain and the United States in 1906, 1908, 1909, and 1925. Pursuant to the Tribunal

decision, surveying and monumenting of the boundary southeast of Mount St. Elias was begun in 1904. The survey of this area was completed in 1920 and resulted in 13 maps. The maps were individually published upon their completion and were collectively published in 1951 by the International Boundary Commission, U.S. Department of State, under the title "Joint Maps of the International Boundary between the United States and Canada, from Cape Muzon to Mount St. Elias." The surveying and monumenting of the boundary along long. 141° W. between 1907 and 1913 resulted in 38 maps. The first 32 sheets were published individually in 1914; sheets 33-38 were published in 1918. The International Boundary Commission collectively published the maps in 1918 under the title "Atlas of the International Boundary between the United States and Canada, Arctic Ocean to Mount St. Elias." Many local names were reported by personnel of the survey parties. They also gave names in commemoration of persons, events, or conditions.

Jackson, Sheldon: 1877-1906

Rev. Sheldon Jackson, 1834-1909, Presbyterian missionary, first visited Alaska in 1877 in the interests of schools and missions. Because he had repeatedly visited Alaska, had established missionary schools there, and had written a book on Alaska, Jackson in 1885 was appointed U.S. general agent for education in Alaska. Thereafter he made annual visits to Alaska, traveling extensively in various areas on inspection tours. In 1891 he began the importation of reindeer into Alaska from Siberia as a means of improving native conditions. Jackson remained general agent until 1906, when he was recalled. Reports by Jackson and his subordinates were published annually from 1890 to 1906.

Jarvis, David Henry: 1897-98

In the winter of 1897-98, Lt. (later Capt.) David Henry Jarvis, 1852-19?, USRCS, conducted an overland expedition for the relief of the whaling fleet imprisoned by the ice in the vicinity of Point Barrow. On December 16, 1897, he and three companions were landed on Nunivak Island by the revenue cutter *Bear*.

From Nunivak Island the expedition traveled by dog teams across the delta and lake country to Andreafski, on the Yukon, thence down the Yukon and along the coast to St. Michael. From St. Michael the route lay along the coast of Norton Sound to Cape York, by one section, and across the base of Seward Peninsula to Kotzebue Sound, by another. From the various stations on the shore of Norton Sound, a herd of 448 reindeer was collected and driven across Kotzebue Sound on the ice and thence along the Arctic coast to Point Barrow, which was reached on March 29, 1898.

This expedition was more remarkable for the feat than its contributions to geographic knowledge. A detailed account was published in 1899 in the report of the *Bear*, under the authorship of the U.S. Revenue-Cutter Service.

A mountain, stream, and village have been named in commemoration of Jarvis, who in 1902 was appointed collector of customs for Alaska.

Jones, Ernest Lester: 1913-1929

Ernest Lester Jones, ?-1929, veterinary surgeon, served as Deputy Commissioner of the U.S. Bureau of Fisheries (later in-

cluded in the U.S. Fish and Wildlife Service), from 1913 to 1915, during which period he named many features in Alaska. He also wrote "Report of Alaska Investigations in 1914," published by the Bureau of Fisheries in 1915.

In 1915, President Woodrow Wilson appointed him Superintendent of the U.S. Coast and Geodetic Survey, an office he retained until his death in 1929. While in office he reorganized the Coast and Geodetic Survey and included added emphasis on Alaskan surveys. During his administration he named several new features in Alaska.

Kotzebue, Otto von: 1816-17

Lt. Otto von Kotzebue, 1787-1846, IRN, in command of the brig *Rurik*, sailed on an exploratory mission to America in 1816 with the hope of finding a northwest passage. He landed on Saint Lawrence Island on July 27, crossed Bering Strait on July 31, and entered the sound which he named for himself on August 3, 1816. Kotzebue explored and mapped these areas and in 1821 published an account of his travels; the account was translated in London by H. E. Lloyd in the same year.

Krause, Arthur: 1882

Two brothers, Arthur Krause, 1851-?, and Aurel Krause, 1848-?, were sent in 1881 by the Bremen Geographical Society to the Chukotsk Peninsula in Siberia. After completing their studies there, they traveled to the Chilkat Inlet where they mapped the area and made intensive studies of the Tlingit Indians. Aurel returned to Germany in the spring of 1882, and Arthur made two journeys into Canada. Results of their journeys were published in German in 1883 and 1885. The English translation by Edna Gunther of their study of the Tlingit Indians was published in 1956.

Krenitzin, Peter Kuzmich: 1768-69

Capt. Peter Kuzmich Krenitzin, ?-1770, IRN, in command of the galiot *St. Catherine*, and his assistant, Lt. Michael Levashev, IRN, in command of the hooker *St. Paul*, cruised through the eastern Aleutian Islands in 1768-69. This expedition was organized and conducted as a mission of observation, physical and cultural, of the regions visited, under the auspices of the Imperial Russian Government. The first account of this voyage, with a track chart, was published in 1780 by Coxé (1787). Port Levashev, on the north coast of Unalaska Island, and the Krenitzin Islands, also in the eastern Aleutians, were named for these two men. See Bancroft (1886).

Krusenstern, Adam Johann von: 1804-5

Lt. Comdr. (later Adm.) Adam Johann von Krusenstern, 1770-1846, IRN, was appointed in 1802 by Alexander I of Russia to

lead an expedition for "exploring the Russian Pacific shores and of developing diplomatic and trade relations with Japan and China." This expedition, 1803-6, commanded by Krusenstern on the *Nadezhda*, accompanied by Capt. U. T. Lisianski, IRN, on the *Neva*, resulted in the first circumnavigation of the world by the Russians. The first part of the journey was concerned with the delivery of supplies to the Russian American Company and was followed by an exploration of the Siberian coast and a diplomatic mission to Japan. Many surveys were carried out on this voyage, Krusenstern later being responsible for many publications on the North Pacific including an atlas of the Pacific Ocean published in 1827, although he never set foot on the northwest coast of America. Several maps of this atlas were used in the preparation of this dictionary. Krusenstern is commemorated by Cape Krusenstern, in northwest Alaska.

Kuritzien: 1849

Full Pilot Kuritzien (cnna), IRN, made a survey of Umnak Island in the Aleutian Islands about 1849. His map was published as an inset on map 25 of the 1852 Tebenkov atlas.

Langsdorff, Georg Heinrich von: 1804-5

Georg Heinrich von Langsdorff, 1774-1852, a member of the Russian embassy to Japan headed by Ambassador Nikolai Rezanov, sailed with Lt. Comdr. A. J. von Krusenstern, IRN, on the *Nadezhda* in 1803. In 1805 he left Krusenstern's company in Siberia and, with Rezanov, he then traveled to the Pribilof Islands, Unalaska and Kodiak Islands, Sitka, and California before returning to Russia. An account of his travels was published in London in 1813-14.

La Pérouse, Jean Francois de Galaup de: 1786

In 1785 Louis XVI of France placed Jean Francois de Galaup (Comte?) de La Pérouse, 1741-88, in charge of a scientific exploring expedition to search for a northwest passage and to establish a valid claim in northwest North America. La Pérouse, in command of the vessel *La Boussole*, was accompanied by Capt. de Langle, in command of the *L'Astrolabe*. Sailing from France in 1785, via Cape Horn and Hawaii, they sighted the coast of Alaska in the vicinity of Yakutat on June 24, 1786. La Pérouse landed at Lituya Bay, made a detailed examination, and took formal possession. They then sailed south, surveying the coast to Monterey, Calif. The expedition was last heard from in 1788 off the coast of Australia. La Pérouse had sent his interpreter Jean, Baron de Lesseps, back to France along an overland route with maps and records of the expedition. The results of the expedition were published in 1797 by the French Government. (See fig. 5.) English editions were published the following year. La Pérouse Glacier and Mountain, in the southern part of the St. Elias Range, were named for this navigator.

Leffingwell, Ernest de Koven: 1906-14

Ernest de Koven Leffingwell, 1876- , first went to Alaska in 1906 with Capt. Ejnar Mikkelsen in the schooner *Duchess of Bedford* on the Anglo-American Polar Expedition. They sailed north, around Point Barrow to Flaxman Island on the Arctic coast. Although Mikkelsen returned home the following year and published his narrative, Leffingwell lived with the Eskimos another year.

He returned to the Flaxman Island base in 1909 and remained 3 years doing geological and geographical studies of the Canning River region; during this time, he compiled the first accurate maps of a part of the north coast of Alaska. Another year was spent in the area in 1913-14. The results of this work, done mostly without assistance and at Leffingwell's own expense, were published as a U.S. Geological Survey professional paper. Leffingwell had an interest in geographical nomenclature, and his work contains a list of names on the Arctic coast of Alaska which were applied by explorers, obtained from the Eskimos, or given by himself.

Leslie Expedition: 1890-91

In the spring of 1890 Frank Leslie's Illustrated Newspaper sent an expedition to Alaska. Early in May E. J. Glave, executive officer and artist, E. Hazard Wells, chief of operations, and Alfred B. Schanz, astronomer and historian, accompanied by Frank Price and John Dalton, guide, ascended the Chilkat River. The party split at Lake Kusawa in Canada.

Though an extensive endeavor, actual geographic contributions of the expedition were limited to Glave's descent of the Alsek River, Wells's examination of the area near the upper Tanana and Tok Rivers, and Schanz's survey of the region which placed Lake Clark definitely on the maps. Schanz's chapter on the Nushagak district was published in the 11th Census, in 1890 (1893, p. 91-97).

Leslie Glacier and Pass, at the head of the Chilkat River, were named by the expedition, but these names have not survived. Mount Glave in Canada near the headwaters of the Klehini River was named for the leader of the expedition.

Levashev, Michael: 1768-69. See Krenitzin.

Lindenberg: 1838

In 1838 a survey and chart was made of the head of Lynn Canal and the lower end of the Chilkat River by Lindenberg (cnna). This chart was published in 1848 as an inset on Russian Hydrographic Department Chart 1396. The Lindenberg Peninsula, on the eastern side of Kupreanof Island, was named for this navigator by his countrymen.

Lisianski, Urey Theodorovich: 1804-5

Capt. Urey Theodorovich Lisianski, 1773-1837, IRN, in command of the *Neva*, accompanied by Adm. A. J. von Krusenstern, IRN, on the *Nadezhda*, made the first Russian circumnavigation of the world in 1803-6. Lisianski parted company with Krusenstern near the Hawaiian Islands and sailed for Kodiak while Krusenstern continued to the Far East. When Lisianski arrived at Kodiak on July 14, 1804, he learned that the Indians had destroyed the Russian settlement at Sitka. Lisianski then sailed to Sitka, after making minor repairs to his ship and unloading some supplies. He arrived at Sitka on August 20, helped Alexander A. Baranov, governor of the Russian American colonies, repel the Indians and build a new settlement. Lisianski went back to Kodiak for the winter but returned to Sitka in June 1805 and remained until September 1, when he sailed to China and then returned to Russia. Lisianski contributed to the naming of Alaskan features in the Kodiak Island and southeast areas, including the naming of Baranof Island for the governor in 1805. In 1814 an account of his journey, translated from the Russian, was published in London. Lisianski Point and Strait in southeastern Alaska were named for this Russian explorer.

Lutke, Feodor Petrovich: 1827-28

In 1826 Capt. Feodor Petrovich Lutke, 1797-1882, IRN, in command of the corvette *Seniavine*, accompanied by Capt. M. N. Staniukovich, IRN, in command of the sloop *Moller*, was sent by the Russian Government on an exploring expedition around the world which lasted until 1829. Lutke and Staniukovich arrived at Sitka on June 24, 1827. On July 31, they sailed to Unalaska where they stayed for 8 days after their arrival on August 22. They then cruised north and west in the Bering Sea from the Alaska Peninsula to the Pribilof Islands, St. Matthew Island, and Kamchatka, from where they returned home. An account of this expedition was published in 1836 under the title "Voyage around the World * * *" and includes an atlas and a separate volume called "Nautical Part." This work contains hydrographic and geographic information mainly concerning the above-mentioned areas and is considered to be an important reference in the evolution of our geographic knowledge in Alaska. Lutke was responsible for naming many major features on the northern side of the Alaska Peninsula. An index to the "Nautical Part" was written by W. H. Dall, USC&GS, and was published in the 1883 Coast Pilot (p. 320-324). Cape Lutke, on the south coast of Unimak Island in the western Aleutians, was named for this navigator and explorer.

Maddren, Alfred Geddes: 1906-17

Alfred Geddes Maddren, USGS geologist, began his Alaskan investigations as assistant to F. H. Moffit in the Kotsina-Chitina River drainage area in 1906. In subsequent years he worked in various mining areas of Alaska and produced topographic field-sheets which were the sources of many prospectors' names. (See fig. 6.)

Malaspina, Alessandro: 1791

Capt. Alessandro (Alejandro) Malaspina, an Italian navigator in the service of Spain, in command of the *Descubierta*, with Jose de Bustemante in command of the *Atrevida*, sailed from Mexico on May 1, 1791, by commission to attempt to find the water passage which Ferrer Lorenzo Maldonado claimed connected the Pacific with the Atlantic. Sighting land near Sitka on May 1, 1791, the two ships sailed to Yakutat Bay, which they carefully explored. Malaspina then went to Prince William Sound, surveying the coast for the nonexistent passage. He is commemorated in Alaska by the Malaspina Glacier.

Mansfield, Henry Buckingham: 1889-91

Succeeding Lt. Comdr. C. M. Thomas, USN, on the U.S. Coast and Geodetic Survey steamer *Patterson* in 1889 was Lt. Comdr. (later Rear Adm.) Henry Buckingham Mansfield, 1846-1918, USN, who made surveys in the Alexander Archipelago in 1889, 1890, and 1891 before being relieved by Lt. W. I. Moore, USN, on February 2, 1892. Mansfield is credited with the naming of several features in the southeastern part of Alaska. An account of his work was published in the Coast and Geodetic Survey Annual Reports for 1890, and his surveys were reflected

in Coast and Geodetic Survey Charts 8075, 8170, 8216, 8218, 8224, 8235, and 8302. Mansfield is commemorated by the naming of Mansfield Peninsula on the northern part of Admiralty Island.

Marsh, S. J.: 1901-3

Two prospectors, S. J. Marsh and F. G. Carter, arrived at Collinson Point in Camden Bay in September 1901. They wintered on the beach, explored some of the inland streams, and reported three large rivers between the Canning and the Colville Rivers.

In April 1902 Marsh moved provisions inland to Cache Creek and explored its headwaters. He met Carter and H. T. "Ned" Arey 25 miles from this stream's junction with the Canning River, and the three men wintered in the mountains.

In February 1903 Carter ascended the Marsh Fork Canning River and crossed the divide into the Yukon drainage. Marsh followed him in April and remained with him until the Chandalar River was navigable. (See fig. 7)

Arey sledged to the Canning from Point Barrow in 1901 and spent 11 years in this area. He was the first to explore the mouths of the Canning, Julahula, Jago, and Okpilak Rivers and to gain detailed knowledge of the coastline. He gave Marsh the native maps of the Kuparuk, Sagavanirktok, and Shaviovik Rivers, and these maps were eventually incorporated in the U.S. Geological Survey maps of 1903.

Carter Creek east of Collinson Point, Marsh Fork Canning River, and Arey Island west of Barter Island commemorate these early prospectors.

Marshall, Robert: 1929-39

As a forester, Robert Marshall, 1901-39, made several journeys into the upper reaches of the Koyukuk River in the Brooks Range to study tree growth at the northern timberline as well as to know the pleasure of wilderness exploration. Marshall made a reconnaissance map of the northern Koyukuk region after his 1931 trip. This map displayed 137 names never before published. Many of these names had been in use for many years but were unknown outside the immediate area. A great number of the names were given by Marshall. All names were approved by the U.S. Board on Geographic Names in 1932. His 1938 and 1939 trips to the same area produced more names and refinements in his map.

Martin, George Curtis: 1903-21

George Curtis Martin, 1875-1943, USGS geologist from 1903 to 1924, spent 17 years participating in Alaskan fieldwork and for several years had administrative responsibility for the conduct of U.S. Geological Survey Alaskan work. He was Executive Secretary of the U.S. Board on Geographic Names from 1935 to 1943. Mount Martin on the Alaska Peninsula is named for him.

Martin, Lawrence: 1904-13

Lawrence Martin, 1880-1955, geologist and geographer, participated in six expeditions to Alaska in 1904-13, including the Yakutat and Glacier Bays excursion of the 12th International Geological Congress in 1913. Meade, Richard Worsam: 1868–69

Comdr. (later Rear Adm.) Richard Worsam Meade, 1870–1933, USN, in command of the U.S.S. *Saginaw*, cruised through the Alexander Archipelago in southeast Alaska during the winter of 1868–69 and made reconnaissance sketches of various places en route. An account of the cruise was published by the U.S. Navy Department as "Hydrographic Notice No. 13 of 1869," and Meade's maps were incorporated in U.S. Navy Hydrographic Chart 225, published in 1869. Meade Glacier, near Lynn Canal, and Meade Point, on the northwest coast of Kuiu Island in southeast Alaska, were named for him.

Meares, John: 1786–89

Capt. John Meares, 1756?–1809, on the *Nootka*, and Lt. William Tipping, RN, in command of the *Sea Otter*, sailed from Bengal, India, in March 1786 on a trading venture to the Malay Peninsula and northwest North America. Meares reached the Aleutian Islands in August 1786, but nothing was ever heard again of Lt. Tipping or the *Sea Otter*.

Meares then cruised eastward through the Aleutian Islands to Unalaska Island, the Shumagin and Kodiak Islands, Cook Inlet, and Prince William Sound where he wintered. In 1787 he proceeded to Sitka and sailed from there to the Hawaiian Islands and then on to China, arriving there in October 1787.

In 1788 Meares again set out for northwest North America with two new ships, the *Felice* and *Iphigenia*. Capt. William Douglas was placed in command of the *Iphigenia*. Meares reached Vancouver Island in May 1788, and Douglas arrived in Cook Inlet in June. From Cook Inlet Douglas voyaged east and south and joined Meares at Nootka Sound in August. They wintered in Hawaii, returned to North America for additional fur trading, and then sailed for China in 1789. That same year Meares sent out another trading expedition to North America under Capt. James Colnett, who commanded two vessels, the *Princess Royal* and the *Argonaut*. Meares is commemorated by several features in Alaska.

Mendenhall, Walter Curran: 1898–1902

Walter Curran Mendenhall, 1871–1957, USGS geologist from 1894 to 1943 and Director of the USGS from 1930 to 1943, was attached to an Alaskan military exploring expedition, under the command of Capt. E. F. Glenn, which in the summer of 1898 explored east of Cook Inlet and northeastward up the Matanuska River and across the Alaska Range to the Tanana River. Mendenhall worked in the east part of the Seward Peninsula with W. J. Peters, topographer, in 1900. In 1901, with D. L. Reaburn, topographer, he made a topographic and geologic reconnaissance from Fort Hamlin on the Yukon, by way of the Dall, Kanuti, Alatna, and Kobuk Rivers, to Kotzebue Sound. Mendenhall in 1902 was geologist to a party led by T. G. Gerdine, topographer, in the Copper River area.

Mertie, John Beaver, Jr.: 1911–42

John Beaver Mertie, Jr., 1888– , USGS geologist, began his Alaskan work in 1911 assisting L. M. Prindle in the study of gold placers on the upper Yukon River. In following seasons he did

geological investigations in various areas from the Circle and Fairbanks districts south.

Mikkelsen, Ejnar: 1906. See Leffingwell.

Moore, Edwin King: 1895–98

Lt. Comdr. Edwin King Moore, 1847–1931, USN, succeeded Lt. W. I. Moore, USN, in command of the U.S. Coast and Geodetic Survey steamer *Patterson* on March 15, 1895, and made surveys in the Alexander Archipelago until being recalled in the spring of 1898 to participate in the Spanish-American War. An account of his work was published in the Coast and Geodetic Survey Annual Report for 1895, and his work was also reflected in Coast and Geodetic Survey Charts 8170, 8281, and 8283. (See fig. 8.) The Moore Mountains on the southern end of Chichagof Island in southeast Alaska were named for him and for Lt. W. I. Moore, USN.

Moore, William Irwin: 1892–95

Lt. William Irwin Moore, USN, succeeded Lt. Comdr. H. B. Mansfield, USN, in command of the U.S. Coast and Geodetic Survey steamer *Patterson*, on February 2, 1892, and made surveys in southeast Alaska until being relieved by Lt. Comdr. E. K. Moore, USN, on March 15, 1895. An account of his work was published in the U.S. Coast and Geodetic Survey Annual Reports for 1893, 1894, and 1895. Results of his surveys were also included in Coast and Geodetic Survey Charts 8075, 8214, 8240, and 8283.

Moser, Jefferson Franklin: 1897–1901

Lt. Comdr. (later Rear Adm.) Jefferson Franklin Moser, 1848–1934, USN, commanded the U.S. Bureau of Fisheries (later the U.S. Fish and Wildlife Service) steamer *Albatross* during cruises in Alaskan waters in the summers of 1897 and 1898. A report of this work was published in 1899. The hydrographic notes and sketches of harbors and anchorages made on the 1897 cruise were published by the U.S. Coast and Geodetic Survey in 1899.

In 1900–1901 Moser, on the *Albatross*, visited most of the canneries and important salmon streams on the Alaskan coast from Dixon Entrance to the Nushagak River on Bristol Bay. He made sketch maps of the streams with their tributary lakes, added to Lt. Comdr. Z. L. Tanner's 1890 chart of Bristol Bay, and made reconnaissance charts of Alitak Bay, the southwestern coast of Kodiak Island, and Afognak Bay. He also made a topographic reconnaissance of the coast between Alek River Delta and Yakutat Bay. Reports of these trips were published in 1902. Moser is credited with having reported as well as given a large number of names in Alaska. A number of features have been named for Moser.

Muir, John: 1879–99

John Muir, 1838–1914, naturalist and travel writer, first visited Alaska in 1879; in the company of Samuel Hall Young, 1847–1927, Presbyterian missionary, he canoed through the Alexander Archipelago and was the first to systematically explore Glacier Bay and Muir Glacier. This journey was recorded and published by Young. They made a chart of Glacier Bay and enumerated the Tlingit Indians, the results being incorporated by Ivan Petroff in the 10th Census in 1880.

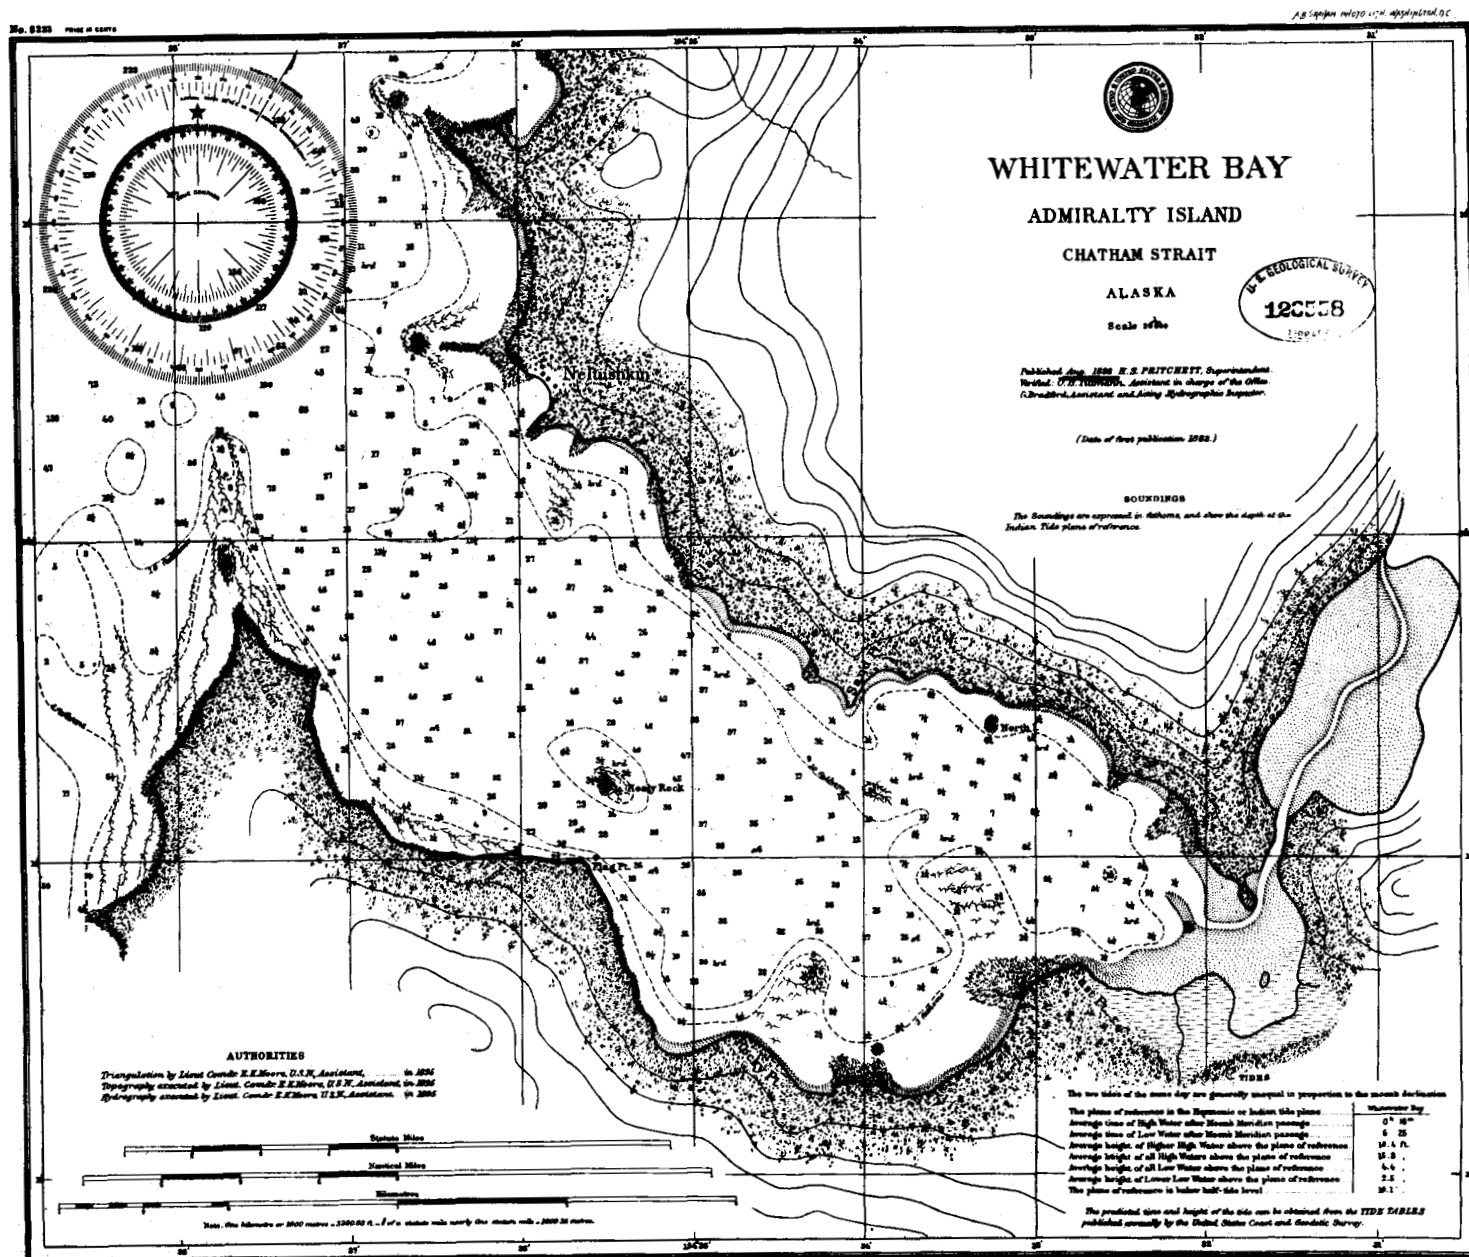

FIGURE 8.—An 1898 U.S. Coast and Geodetic Survey chart of Whitewater Bay, by Lt. Comdr. E. K. Moore, USN.

In 1881 Muir joined E. W. Nelson on the revenue cutter *Corwin* on a cruise in the Bering Sea and Arctic Ocean. Muir, as an authority on glaciers, returned to Alaska in 1899 as a member of the Harriman Alaska Expedition. Muir Inlet and Muir Glacier, in the Glacier Bay area, were named for him.

National Geographic Society Expeditions: 1890-1963

The National Geographic Society has sponsored several expeditions or series of studies in Alaska, beginning with the Mount St. Elias Expedition of 1890-91, led by I. C. Russell. In 1909-11 and 1913, R. S. Tarr and Laurence Martin carried out glacier studies in southeast Alaska (see fig. 9). After the Mount Katmai eruption in 1912, G. C. Martin made a reconnaissance survey of the region, while R. F. Griggs led six expeditions to the Mount Katmai area from 1915 to 1919 and in 1930. Other expeditions sponsored by the society included T. A. Jaggar's study of Pavlof Volcano in 1928 and Father B. R. Hubbard's trip to the Alaska Peninsula and the Aleutian Islands in 1934. In 1936 two expeditions were sent to Alaska: the Smithsonian

Institution Bering Strait, Alaska, Archeological Expedition, led by H. B. Collins, Jr., and the Bradford Washburn Mount McKinley aerial photographic survey. A Mount St. Elias-Mount Logan aerial survey was also made by Washburn in 1938. Research on North American birds was carried out in Alaska in 1948 by A. A. Allen, of Cornell University; that same year the society sponsored an extensive study of the May 8-9 solar eclipse, establishing stations in the Aleutian Islands. In 1961 a party led by M. M. Miller revisited areas covered by the 1909-11 Alaskan glacier studies. The society also took part in the study of the August 1963 solar eclipse, which passed across central Alaska.

Nelson, Edward William: 1877-81

Edward William Nelson, 1855-1934, spent the years 1877-81 at St. Michael conducting meteorological observations for the Service (U.S. Army Signal Corps). Nelson replaced Lucien McShan Turner, who had been there since 1874; Turner in 1877 went to the Aleutians where he trained voluntary observers and collected specimens until 1881. Both men were naturalists and devoted much of their time to study of the local population and collecting material and information for the Smithsonian Institution. Nelson made sledge journeys throughout the vicinity, including one journey of about 1,200 miles through the Yukon Delta from December 1878 to March 1879. Much of his knowledge of that area was incorporated by Ivan Petroff into the 10th Census, in 1880, and he is credited in this dictionary with reporting numerous Eskimo names. In 1881 Nelson joined John Muir on the revenue cutter *Corwin* on a cruise in the Bering Sea and Arctic Ocean. Nelson went on to become Chief of the U.S. Bureau of the Biological Survey (later included in the U.S. Fish and Wildlife Service) from 1916 to 1927. Nelson Island in the Yukon-Kuskokwim Delta was named for him.

Nichols, Henry E.: 1881-84

Lt. Comdr. Henry Ezra Nichols, 1843-99, USN, was in command of the U.S. Coast and Geodetic Survey steamer *Hassler* from 1881 to 1883. In this capacity he made surveys in Kaigani and Wrangell Straits in 1881. In 1882 he worked in the Revillagigedo Channel area and north to Wrangell, and in 1883 he surveyed several coves and harbors just north of Dixon Entrance. Relieved of his command in 1884 by Lt. Comdr. A. S. Snow, USN, Nichols took command of the U.S.S. *Pinta* and through September of that year was responsible for the maintenance of order in Alaska.

Nichols was again employed by the Coast and Geodetic Survey in 1888-90 to revise the 1883 Coast Pilot. The revised Coast Pilot was published in 1891 and is sometimes referred to as the Nichols Coast Pilot. Accounts of Nichols' activities were published in Coast and Geodetic Survey annual reports. Nichols' name has been given to a bay, a group of islands, a mountain, and a passage in the Alexander Archipelago as well as to a group of hills at the mouth of the Nushagak River.

North Pacific Exploring Expedition: 1854-55

In 1854-55, explorations and surveys were made in the North Pacific, Aleutian Islands, Bering Sea, and Siberian coast by the U.S. Navy. This expedition is referred to as the North Pacific

Exploring Expedition and was begun under the command of Capt. Cadwalader Ringgold, USN. Owing to the stress of illness, Ringgold relinquished command to Capt. John Rodgers, USN, of the U.S.S. *Vincennes*. Also on the Expedition were Lts. William Gibson and Beverley Kennon, USN, on the schooner *Fenimore Cooper*. During the summer of 1855 Gibson, in command of the *Fenimore Cooper*, cruised through the Aleutian Islands and with the help of Kennon, corrected charts and surveyed harbors, concentrating his efforts at Attu and Adak Islands. Kennon Island, in the entrance to Chichagof Harbor on Attu Island, was named by Gibson for his fellow officer, and nearby Gibson Island was named by members of the expedition for Lt. Gibson. The resulting maps and charts of the entire expedition were published by the U.S. Navy Hydrographic Office as Charts 8, 54, 55, 60, and 68.

Osgood, Wilfred Hudson: 1899-1914

In 1899 Wilfred Hudson Osgood, 1875-1947, conducted a biological reconnaissance for the U.S. Bureau of the Biological Survey (later included in the U.S. Fish and Wildlife Service) along a route from Skagway, over White Pass, to the headwaters of the Yukon River and along the course of the Yukon to its delta. The results of this study, including a general account of the region, were published by the U.S. Department of Agriculture in 1900. Osgood next went to the Cook inlet region in 1900 for a biological investigation of the flora and fauna of this region.

He continued his investigation in the Cook Inlet region in 1902 by conducting an overland journey across the upper Alaska Peninsula. He and his party embarked from Iliamna Bay in July and proceeded over the mountains to Lake Iliamna and Lake Clark. They continued by way of the Chulitna and Nushagak Rivers to Bristol Bay, and from there to the head of the southern arm of Becharof Lake. Here they crossed the mountains and proceeded to Portage Bay on Shelikof Strait; they finally arrived at Cold Bay in October. A report, including a map of the region constructed from sketches and notes by Osgood, was published by the U.S. Department of Agriculture in 1904. Osgood continued his biological studies in Alaska in the summer of 1903 by conducting surveys between Eagle and Circle on the Yukon River, and in the area of Glacier Mountain.

In addition to his Alaska mainland studies, he did extensive research and fieldwork on the fur seals and other life on the Pribilof Islands. The results of this work were published in 1915 by the U.S. Fish Commission.

Pender, David: 1868

Staff Comdr. David Pender, RN, made a survey of Portland Canal and vicinity in 1868. The resulting map was published in 1882 as a flyleaf attached to British Admiralty Chart 2431. Pender named several features in southeast Alaska.

Perez, Juan: 1774. See Spanish Expeditions.

Peters, William John: 1898-1902

William John Peters, 1863-1942, USGS topographer, began his Alaskan work in the summer of 1898 by leading a reconnaissance party, with A. H. Brooks as geologist, to the White and Tanana Rivers in eastern Alaska. In 1899 the same party continued explorations from the head of Lynn Canal to Eagle on the

Yukon. In 1900, with W. C. Mendenhall as geologist, a reconnaissance was made in the Norton Bay area of southeast Seward Peninsula. Peters led a party in 1901 on a reconnaissance of northern Alaska with F. C. Schrader as geologist. This trip crossed the Brooks Range at Anaktuvuk Pass to the Arctic, and proceeded along the coast to Cape Lisburne. In 1902 Peters made a topographic map of the Juneau area. His fieldsheets of these expeditions were the source of many new names in Alaska. He is commemorated in northern Alaska by Lake Peters and by Peters Glacier on Mount McKinley.

Petroff, Ivan: 1866-92

Born in St. Petersburg, Russia, in 1842, Ivan Petroff came to America in 1861 and fought in the Union Army. He worked in the Kenai and Kodiak areas from 1866 to 1870. In 1874 he was employed collecting, examining, and translating Russian sources for H. H. Bancroft's "History of Alaska," published in 1866.

Petroff was appointed special agent to conduct the Alaska part of the 10th Census, in 1880. (See fig. 10.) As an agent he spent the summer of 1880 and 1881 traveling between Kodiak, the Shumigans, Sannak, Belkofski, Unalaska, Unimak, Atka, Pribilof Islands, and St. Michael, and he made journeys of considerable distance up the Yukon and Kuskokwim Rivers. Petroff's report included not only population information but also history, geography, and resources. An enumeration of the people of the Arctic coast down to Kings Island in the Bering Sea was conducted by Capt. E. E. Smith, a whaling master, who spoke the Eskimo language and sailed with the *Thomas Corwin* on her Arctic cruise in 1880 in the capacity of ice pilot. An enumeration of the people from Kings Island to the mouth of the Kuskokwim River, including the people on the Yukon Delta, was reported by E. W. Nelson, U.S. Signal Service. Petroff was unable to visit southeast Alaska as he was shipwrecked on his way south. A preliminary report of the 10th Census was published in 1881 and the final report in 1884. Numerous maps and sketches added to this detailed survey. Petroff was assigned the same position for the 11th Census in 1890.

Portlock, Nathaniel: 1786-87

Capt. Nathaniel Portlock of the *King George* and Capt. George Dixon, 1755-1800, of the *Queen Charlotte* sailed from England in 1785 for the northwest coast of North America on a commercial trading expedition. These two vessels were owned by the King George's Sound Company, a partnership set up for trade between the Pacific Northwest and China. They went by way of Cape Horn, touched the Hawaiian Islands, and on July 16, 1786, arrived at Cook Inlet. Portlock and Dixon traded with the natives of Cook Inlet and Prince William Sound and gave names to many of the features they discovered. Leaving this area the two ships cruised eastward and southward along the coast as far as Nootka Sound on Vancouver Island. They then sailed for the Hawaiian Islands where they wintered, and returned again in the spring to Prince William Sound.

As the native villages around the sound were small, it was decided that only Portlock would stay to trade while Dixon proceeded down the coast. Dixon visited Yakutat Bay, Sitka Sound, and Dixon Entrance. Portlock did some additional trading and

exploring down the southeast coast of Alaska. Both vessels then proceeded separately back to England via Hawaii and China. Both Portlock and Dixon wrote accounts of their voyages which were published in London in 1789. Dixon Entrance was named by Portlock for Dixon, and there are several features named for Portlock.

Post, William Schuyler: 1898. See Spurr.

Pratt, John Francis: 1898-1904

Assistant John Francis Pratt, USC&GS, commanded the Coast and Geodetic Survey steamer *Patterson* in Alaskan waters during 1899-1904. In 1898-99 Pratt had general supervision of all Coast and Geodetic Survey parties on the Bering Sea, and a party under his immediate direction made a reconnaissance of the passes of the Yukon River and surveyed St. Michael Harbor. In 1900 he commanded a party that performed a hydrographic study in Norton Sound and made a detailed survey in Port Clarence. He continued his survey work in southeast Alaska during the summer of 1901. In 1902 Pratt, commanding the *Patterson*, did survey work and took soundings in the Bering Sea in the vicinity of St. Lawrence Island. The following year was spent taking soundings in the Pacific Ocean from the entrance of Juan de Fuca Strait to Cape St. Elias preparatory to laying a deep-sea cable. Pratt also did additional survey work in the Controller Bay region. In 1904 Pratt was in charge of a survey in the Kiska Island region.

Pribilov, Gerassim Gavrilovich: 1786

A master in the Imperial Russian Navy, Gerassim Gavrilovich Pribilov entered the employ of the Lebedev-Lastochkin Company, a competitor of the Shelikov Company (later, Russian American Company) in 1778. In 1786 Pribilov discovered the fur seals' breeding place, a group of islands in the Bering Sea which were subsequently named for him. Pribilov died in Sitka in 1796.

Prindle, Louis Marcus: 1902-11

Louis Marcus Prindle, 1865-1956, USGS geologist from 1902 to 1935, began his Alaskan work in 1902 as assistant to A. H. Brooks in the exploration of the Mount McKinley region. He spent each season until 1911 in the Yukon-Tanana area and in parts of the Alaska Range. Mount Prindle in the White Mountains and Prindle Volcano near the head of Fortymile River were named for him.

Prospectors and miners

Ever since its purchase in 1867, prospectors and miners have been giving names to the streams and gulches of Alaska either for their own reference or for the purpose of identifying mining claims. Various parts of the State have experienced gold rushes, and each of these areas consequently has a high density of stream names. The names exist today because government explorers and surveyors obtained them from prospectors' stakes, or by word of mouth. Such names, if determined, have been credited to the prospectors and miners. A few prospectors made fairly good sketch maps of previously unmapped areas and, if known, have been given credit in this dictionary for the name reporting.

Putnam, George Rockwell: 1897–1899

Assistant George Rockwell Putnam, 1865–?, USC&GS, was a member of Duffield's 1897 survey party on the Pribilof Islands. While he was there, he collected a list of "Native Names for Localities on Saint George Island, Bering Sea," which was published in the U.S. Coast and Geodetic Survey Annual Report for 1903. While Faris and Pratt surveyed the Yukon River Delta

in 1898–99, Putnam, with a subparty, made topographic and hydrographic surveys of the coast north from Scammon Bay to the Apoon River, including several of the principal river channels. The material he acquired was published on several new Coast and Geodetic Survey charts, and his reports of the operation were included in the Coast and Geodetic Survey Annual Reports for 1899 and 1900.

Ray, Patrick Henry: 1881-83

Capt. Patrick Henry Ray, 1842-1911, USA, was chosen to head the Point Barrow meteorological station during the first international polar year. In 1883 Capt. Ray made a sledge journey into the interior and published a map showing the results of his exploration. At the Barrow station with Ray was Sgt. John Murdoch, 1852-1925, naturalist, who contributed the natural-history part of Capt. Ray's report. Murdoch also studied the Eskimos, acquired some knowledge of their language, and published in 1892 the ethnological results of the expedition. The Ray Mountains in central Alaska were named for Ray.

Raymond, Charles Walker: 1869

In 1869 the U.S. Army sent Capt. (later Brig. Gen.) Charles Walker Raymond, 1842-1913, to Fort Yukon to establish its longitude to determine whether the Hudson's Bay Company's trading station was in Alaska as was believed. Raymond was a member of the U.S. Army Corps of Engineers (sometimes referred to as the U.S. Engineers). He was authorized to represent the U.S. Treasury Department so that he could order the Hudson's Bay Company to vacate Fort Yukon if the determination was favorable to the United States. He went upriver on the Alaska Commercial Co. river steamer *Yukon* and returned on a raft he designated *Eclipse*. His reports were published in 1871, and the sketch maps of the Yukon River showed many native names for tributary streams.

Reaburn, Dewitt Lee: 1900-1903

Dewitt Lee Reaburn, 1871-?, USGS topographer, began work in Alaska with E. C. Barnard in 1900. In 1901, with W. C. Mendenhall, Reaburn made a reconnaissance topographic survey from Fort Hamlin on the Yukon, by way of the Dall, Kanuti, Alatna, and Kobuk Rivers, to Kotzebue Sound. In 1902, with A. H. Brooks, Reaburn carried a continuous planetable survey over 800 miles from Cook Inlet to the Yukon River along the west flank of the Alaska Range. (See fig. 11.) He temporarily transferred to the U.S. Department of State in 1903, where he participated in United States-Canada boundary work.

Reid, Henry Fielding: 1890-92

Henry Fielding Reid, 1859-1944, professor of mathematics, physics, geology, and geography at the Case School of Applied Sciences and at Johns Hopkins University, visited Muir Glacier area in 1890 and 1892, and the results of his glaciological studies were published in 1896 in the Sixteenth Annual Report of the U.S. Geological Survey (Pt. 1, p. 415-461). He was an advisor on glaciology and earthquakes to the U.S. Geological Survey from 1902 to 1914.

Assistant Homer Peter Ritter, USC&GS, was in charge of a survey party on the U.S. Coast and Geodetic Survey steamer *Taku* from 1898 to 1903 and surveyed the Copper River Delta and the

east part of Prince William Sound to Port Valdez. In 1904, he was in command of the steamer *McArthur* and with Assistant Pratt, USC&GS, surveyed Kiska Harbor in the western Aleutian Islands. These surveys resulted in several new charts for the Coast and Geodetic Survey and the U.S. Navy. Ritter's reports were published in Coast and Geodetic Survey Annual Reports for 1899-1905.

Rodgers, John: 1854-55. See North Pacific Exploring Expedition.**Romig, Dr. Joseph H.: 1896-1905.** See Spurr.**Russell, Israel Cook: 1889-91**

Israel Cook Russell, 1852-1906, USGS geologist, traveled the Yukon River in 1889. In 1890-91, under the joint auspices of the National Geographic Society and U.S. Geological Survey, Russell explored Malaspina Glacier, Yakutat Bay, and the Mount St. Elias region. Mark Keer accompanied Russell as a topographer, and the party topographically mapped more the 1,000 square miles. Russell was commemorated by the naming of Mount Russell, in the Alaska Range, as well as Russell Fiord, in southeastern Alaska.

Russian American Company: 1799-1867

In the summer of 1799 under an authorization by the Imperial Government, the Russian American Company was chartered for a period of 20 years and was authorized to act as the official Russian representative in the northwest part of North America. The charter was periodically renewed until the 1867 purchase of Alaska by the United States. During the company's existence much geographic information was gathered and published, including the naming of many features, by its officers. This work was done primarily in the areas of the Alaska Peninsula and Baranof, Kodiak, and Afognak islands. After the Russian sale of Alaska, the majority of the company's material holdings were sold to a private group of Americans under the name of the Alaska Commercial Co.

Russian Hydrographic Department: 1844-54

Between 1844 and 1854 several charts of northwest North America, Bering Sea, and the Arctic were issued as part of a Pacific Ocean series by the Russian Hydrographic Department; many of these charts were used extensively in the preparation of this dictionary. (See fig. 12.) The principal charts in this series, listed by their dates of publication, current numbers, and the old Pacific Ocean series numbers, are as follows:

Date	Number	Old number	Date	Number	Old number
1844	1345	-----	1849	1427	5

Rynda Expedition: 1863

Two Russian naval officers, Butirkin (cnna) and Kadin (cnna), IRN, under the command of Comdr. Bassárguine (cnna), IRN, on the corvette *Rynda*, made a survey of the lower 65 miles of the Stikine River in 1863. Another member of the party, William P. Blake, of New Haven, published in 1867 an account of the work done and the results obtained. In the same year the Russian Hydrographic Department published a chart resulting from this survey. Several names were contributed to the Stikine River area by members of this expedition.

Sargent, Rufus Harvey: 1906–37

Rufus Harvey Sargent, 1875–1951, USGS topographer from 1898 to 1947, began his Alaskan work in 1906 assisting T. G. Gerdine, USGS, in the Cook Inlet area. In subsequent seasons he worked throughout the south half of Alaska, excluding the Aleutians, and his fieldsheets give a wealth of geographic-name information.

Sarichev, Gavril Andreievich: 1790–92

Lt. (later Vice Adm. and Hydrographer) Gavril Andreievich Sarichev, IRN, sailed on the *Slava Rossi* under the command of

FIGURE 12.—*Part of Russian Hydrographic Department Chart 1378, dated 1847, showing Cook Inlet area. Courtesy of Library of Congress.*

Capt. J. Billings, IRN, during the latter's exploring expedition in 1790-92. During this voyage, Sarichev explored the Aleutian Islands and made several surveys there, the most notable in the vicinity of and at Unalaska Island. In 1826 the Russian Hydrographic Office published an "Atlas of the Northern Part of the Pacific Ocean," compiled under the direction of Vice Adm. and Hydrographer Sarichev; many of his earlier surveys appear in this atlas. This work was often used in the preparation of the present dictionary. (See fig. 13.) Cape Sarichef, on the western end of Unimak Island in the eastern Aleutians, was named

for this distinguished contributor to the geographic knowledge of Alaska.

Sauer, Martin: 1790–92

Martin Sauer accompanied Capt. J. Billings, IRN, on the *Slava Rossii* (*Glory of Russia*) as the official secretary and translator during Billings' exploring expedition in 1790–92. In 1802 Sauer's record of the expedition was published in London. Many names of features in the eastern Aleutian Islands can be attributed to his meticulous recording of places and events. See Bancroft (1886).

Schrader, Frank Charles: 1896–1902

Frank Charles Schrader, 1860–1944, USGS geologist from 1896 to 1944, spent six seasons in Alaska beginning in 1896 when he accompanied J. E. Spurr and H. B. Goodrich on a geological reconnaissance from the head of Lynn Canal over Chilkoot Pass to the Yukon River and down the Yukon to St. Michael. In 1898 Schrader was attached to a military exploring expedition, under the command of Capt. W. R. Abercrombie, USA, which made explorations from Valdez northeast to and along the Copper River.

In 1899 he was in charge of a party, including T. G. Gerdine and D. C. Witherspoon, that made explorations along the Chandalar and Koyukuk Rivers. In 1900 he returned to the Copper River area assisted by A. S. Spencer, geologist, with Gerdine and Witherspoon doing the topographic work. In 1901 he was geologist attached to the party led by W. J. Peters on a reconnaissance in northern Alaska; in 1902, with Witherspoon as topographic assistant, he worked again in the upper Copper River basin. Lake Schrader in northern Alaska was named for him.

Schwatka, Frederick: 1883–86

Lt. Frederick Schwatka, 1849–92, USA, graduated from West Point in 1871 and achieved a reputation as an Arctic explorer when in 1879–80 he led a search in the Canadian Arctic for clues to the lost Sir John Franklin expedition. In 1883 he made a military reconnaissance on his raft *Resolute* down the Yukon River from its source to its mouth. The results were published in 1885 in official form and in popular form. In 1886 he returned to Alaska with William Libbey and Heywood W. Seton-Karr under the auspices of the New York Times. This expedition explored and mapped the Mount St. Elias region. Schwatka named a number of features, but his greatest contribution appears to have been the popularization of the State. Schwatka Mountain, on the south side of the Yukon River, and the Schwatka Mountains in northwest Alaska were named for him.

Shishmarev, Gliob Semenovich: 1816–21

Capt. Lt. Gliob Semenovich Shishmarev, IRN, sailed on the brig *Rurik* under the command of Lt. O. von Kotzebue, IRN, during the latter's exploring expedition in 1816–17. While on this expedition, Shishmarev made surveys in Kotzebue Sound and at St. Lawrence Island. In August 1816 Kotzebue named Shishmaref Inlet on the north shore of the Seward Peninsula in his honor. In 1819 Shishmarev left Russia for the colonies in command of the *Blagonamerenny* (*Good Intent*), accompanied by Capt. Lt. M. N. Vasiliev, IRN, commanding the *Otkrytiye* (*Discovery*). When they reached the North Pacific they separated, Vasiliev continuing to Siberia and Shishmarev sailing for Unalaska, where he arrived on June 4, 1820. Afterward he cruised through the Aleutian Islands to Amchitka, Semisopochnoi, Gareloi, and Bogoslof Islands. He then cruised north along the coast and met Vasiliev at Kotzebue Sound. Together, they explored the Arctic coast as far east as Icy Cape and returned via St. Lawrence Island, where Shishmarev completed a survey of the shoreline, partly done by the Kotzebue expedition in 1817. They continued to the Pribilof Islands and explored the Bering Sea coast from Norton Sound to Cape Newenham before arriving at

Unalaska on August 19, 1820. Shishmarev returned to Russia from Unalaska. See Vasiliev, Mikhail Nikolaievich.

Simpson, Thomas: 1837

Thomas Simpson, 1808–40, and Peter Warren Dease, 1783–18?, officers of the Hudson's Bay Company, were placed in charge of an exploring expedition with instructions to complete the gap left in 1826 between the explorations made by Capt. F. W. Beechey and Sir John Franklin, RN.

On June 1, 1837, the party of 14 men started down the Mackenzie River in two open boats and reached Demarcation Point on July 15th and Franklin's Point Beechey July 24th. The bearings and distances between points were found to differ from Franklin's records, but charts were made and names placed on the nearest feasible feature.

From this point their exploration was along an unexplored coast, and they attached names—many commemorating officers of the company, members of their party, and historical personalities, and a few being descriptive—to conspicuous geographic features on their map.

On July 31, further progress of the boats was prevented by ice. Simpson, accompanied by five of the party, proceeded on foot, by means of canvas canoe, and in umiaks borrowed from the Eskimos to Point Barrow, which was reached August 3d. After some hours of communication with the Eskimos at the village, they returned to rejoin Dease and the remainder of the party August 6th. Simpson's journal was published by his brother, Alexander Simpson. Dease Inlet was named by Thomas Simpson for his colleague, and Simpson Lagoon was named by Ernest de Koven Leffingwell for Thomas Simpson.

Smith, Philip Sidney: 1906–46

Philip Sidney Smith, 1877–1949, USGS geologist and Chief Alaskan Geologist from 1924 to 1946, began his Alaskan work on the Seward Peninsula in 1906. In 1910 Smith, accompanied by H. M. Eakin, geologist, made a geological survey from the Koyukuk River drainage to the upper Kobuk River and then descended that stream to its mouth. The following year, accompanied by C. E. Giffin, topographer, he made a reconnaissance of the Alatna River and found a pass to the head of the Noatak River, traversing that stream to its mouth. Smith was on the 1924–26 expeditions to investigate Naval Petroleum Reserve 4. He also worked in the Lake Clark, Iditarod, and Fairbanks area. In 1933–34 he was in Alaska to supervise Public Works Administration programs. The Philip Smith Mountains in the Brooks Range were named for him.

Snow, Albert Sydney: 1886

Lt. Comdr. (later Rear Adm.) Albert Sydney Snow, 1845–1932, USN, in command of the U.S. Coast and Geodetic Survey steamer *Patterson*, and Lt. (later Rear Adm.) James Meredith Helm, 1855–1927, USN, in command of the *McArthur*, made surveys and charted southeastern Alaska between Wrangell Harbor and Port Simpson. Charts of this area, incorporating the results of their reports, were published by the Coast and Geodetic Survey.

Spanish Expeditions: 1775–79

Spanish exploration of the northwest coast of America north of California began in 1774 with an expedition, led by Juan Perez,

which reached the Queen Charlotte Islands, Canada, before turning back. Not satisfied with the results of Perez' expedition, the Mexican Viceroy, Antonio Maria Bucareli, sent two ships in 1775 to explore northward. Owing to scurvy among the crew, the *Santiago*, under the command of Bruno Heceta, turned back before reaching Alaskan waters. The smaller ship *Sonora*, commanded by Don Juan Francisco de la Bodega y Quadra, continued northward to about the area of present-day Sitka, where Bodega y Quadra landed and took possession in the name of the King of Spain. The account of this expedition was recorded by pilot Francisco Antonio Maurelle (Mourelle), second in command on the *Sonora*. On this voyage they discovered and named Bucareli Bay.

On February 11, 1779, another expedition sailed from Mexico; it consisted of *La Princesa*, commanded by Don Ignacio Arteaga, and *La Favorita*, under Bodega y Quadra, with Maurelle as pilot.

The two vessels reached Bucareli Bay early in May, after which they explored the area for 2 months and named many features. (See fig. 14.) About July 1 they sailed north and west along the coast to Prince William Sound, Cook Inlet, and the Alaska Peninsula before turning back on August 7.

Spencer, Arthur Coe: 1900-1916

Arthur Coe Spencer, 1871-1964, USGS geologist from 1896 to 1939, worked with F. C. Schrader in the Copper River region in 1900. In 1903, assisted by C. W. Wright, geologist, he made a detailed study of the geology and mineral resources in the Juneau area and a reconnaissance of the mining camps of the mainland part of southeast Alaska from Windham Bay to and including the Porcupine Creek placer district. He was again in the Juneau area in 1916 working with H. M. Eakin.

Spurr, Josiah Edward: 1896-98

Josiah Edward Spurr, 1870-1950, USGS geologist intermittently from 1895 to 1906, made a geological reconnaissance in the summer of 1896 from the head of Lynn Canal, over Chilkoot Pass, to the Yukon, and then down that river to St. Michael. He was assisted on this trip by H. B. Goodrich and F. C. Schrader; the group did special investigations in the Fortymile, Birch Creek, Eagle, and Rampart districts and thereby reported some of the first prospectors' place names from those areas. See the U.S. Geological Survey Eighteenth Annual Report for 1896-97 (Pt. 3, p. 87-392).

In the summer of 1898 Spurr made a reconnaissance of southwestern Alaska accompanied by William Schuyler Post, topographer. They began at Cook Inlet, crossed the Alaska Range, descended the Kuskokwim River, crossed from its mouth to Nushagak, and then traveled across the Alaska Peninsula to Katmai. On the lower Kuskokwim, Spurr and Post obtained Eskimo names from John Henry Kilbuck, 1861-1922, and Dr. Joseph Herman Romig, Moravian missionaries stationed in the area, and most of these names are recorded on Post's fieldsheets which cover the entire route of the expedition. (See fig. 15.) An account of the expedition was published by the Geological Survey in its Twentieth Annual Report (Pt. 7, p. 31-264). Mount Spurr in the Alaska Range, the Post River in the Kuskokwim drainage, and Kilbuck Mountains commemorate the above men.

Staniukovich, Mikhail Nikolaievich: 1827-28

Capt. Mikhail Nikolaievich Staniukovich, IRN, in command of the sloop *Moller*, accompanied Capt. F. P. Lutke, IRN, on the latter's voyage around the world in 1826-29. Staniukovich made a survey of the north shore of the Alaska Peninsula, the results of which were incorporated in Lutke's "Voyage around the World * * * Nautical Part."

Stanley-Brown, Joseph: 1891

Joseph Stanley-Brown, 1858-1941, USGS geologist, was detailed in April 1891 as special agent for the U.S. Treasury Department to study the seal of the Pribilof Islands. Between June 10 and September 22 he also made contour maps of St. Paul and St. George Islands and detailed maps, not contoured, of the various seal rookeries. These maps were published in the Proceedings of the Fur Seal Arbitration Tribunal of 1893. From 1894 to 1899 Stanley-Brown served as Superintendent of the North America Commercial Co.

Steller, Georg Wilhelm: See Bering.

Stockton, Charles Herbert: 1889

Lt. Comdr. (later Rear Adm.) Charles Herbert Stockton, 1845-1923, USN, in command of the U.S.S. *Thetis*, was assigned the duty of looking after whaling interests in Alaskan water. The cruise of the *Thetis* covered the coast of Alaska from Dixon Entrance, through the Aleutians at Unalaska Island, along the west coast, and east from Point Barrow to the Mackenzie River.

Stockton published an account of this voyage in 1890 in the National Geographic Magazine, and his nomenclature and geographic results were recorded the same year on U.S. Navy Hydrographic Chart 1189. Stockton named the Thetis Islands after his ship, and Stockton Islands were named by Ernest de Koven Leffingwell to commemorate this naval officer's contribution to the geography of the Arctic coast.

Stoney, George Morse: 1883-86

In 1883 Lt. (later Comdr.) George Morse Stoney, 1852-1905, USN, was sent to St. Lawrence Bay, Siberia, to carry presents to the natives who had been very kind to the officers and men of the Naval ship *Rodgers*, which had burned in winter quarters while in search for the *Jeannette*. Stoney, who had been on the *Rodgers*, traveled to St. Lawrence Bay aboard the U.S. revenue cutter *Corwin*, under command of Capt. Michael A. Healy, USN. Healy then proceeded to Kotzebue Sound where Stoney borrowed a boat and some men and explored Hotham Inlet and the lower course of the Kobuk River.

Stoney returned in 1884 aboard the schooner *Ounalaska*. He explored about 300 miles up the Kobuk but had been preceded in this journey by Lt. J. C. Cantwell, USRCS, by a few days. He returned again in 1885 aboard the schooner *Viking* and was again preceded upriver by Cantwell. Stoney wintered at Fort Cosmos, which he built and named. During this time a system of triangulation was extended over the valleys of the Kobuk, Noatak, and Selawik Rivers, and this region as well as the upper Alatna and Colville Rivers and Chandler Lake were explored and mapped. During the winter Ens. (later Rear Adm.) Abraham Vanhoy Zane, 1850-1919, traveled overland to St. Michael

and returned. He has been commemorated by Zane Hills and Zane Pass. In the following spring and summer Ens. (later Rear Adm.) William Lauriston Howard, 1860–1930, made a trip from Fort Cosmos to the upper Noatak and thence via the upper Colville and Chipp Rivers to the Arctic coast and finally to Point Barrow. Here Howard embarked on the revenue cutter *Bear* and returned to Kotzebue Sound. Howard's name has been applied to a pass and a point of land.

Stoney's original report was never published and appears to have been lost. An abbreviated report of his explorations was published in 1900. Some of Stoney's maps survived and are in the National Archives. (See fig. 16.)

Stuck, Hudson: 1903–20

Archdeacon of the Alaskan missions of the Episcopal Church, Hudson Stuck, 1863–1920, traveled more than 20,000 miles by dogsled throughout central and northern Alaska and more than 30,000 miles aboard the launch *Pelican*, on the Yukon River and its tributaries. In 1913 he was a member of the first party (recorded) to have successfully climbed Mount McKinley.

His books, recording accounts of his journeys, were filled with descriptions of physical features, for many of which he supplied the Eskimo or Indian names, and historic notes of the origin of names with valuable information concerning the personalities for whom the features were named.

Tanner, Zera Luther: 1888–93

Lt. Comdr. Zera Luther Tanner, 1835–1906, USN, was commander of the U.S. Bureau of Fisheries (later included in the U.S. Fish and Wildlife Service) steamer *Albatross*. Each season from 1888 to 1893 he cruised in Alaskan waters, making investigations of the fisheries and fishing grounds. His reports were published annually in the "Report of the Commissioner of Fish and Fisheries." Of special note are the reports and accompanying maps of his 1888 and 1890 investigations. A considerable number of names in southwest Alaska and Bristol Bay were reported on these maps, which were published in Fish Commission Bulletins for 1888 and 1889.

Tarr, Ralph Stockman: 1909–11

Ralph Stockman Tarr, 1864–1912, geologist and glaciologist, accompanied Lawrence Martin on the 1909–11 National Geographic Society Expedition to Alaska. He was author of several articles on Alaskan glaciology and on the Alaskan earthquake of 1899.

Tebenkov, Mikhail Dmitrievich: 1831–50

Capt. Mikhail Dmitrievich Tebenkov, IRN, was director of the Russian American Company and governor of the Russian American colonies from 1845–50. His first voyage to northwest North America in the early 1830's took him to the Norton Sound area where he made several surveys. In 1835, he sailed from Russia in command of the Russian American Company's ship *Elena* and arrived in Sitka on April 16, 1836. He remained in the colonies until 1850, when, at the close of his term as director and governor, he returned to Russia. During his stay in the colonies, Tebenkov was active in surveying Alaskan coastal waters and was responsible for the improvement of charts in the interest of the Russian American Company.

Between 1848 and 1850, 39 maps were compiled at New Archangel (now Sitka) under the direction of Capt. Tebenkov. These maps were later put together and published in Russia in 1852 under the title "Atlas of the Northwest Coast of America." The atlas plates were originally engraved at New Archangel by a creole named Kozima Terentiev. (See fig. 17.)

Terentiev, Kozima. See Tebenkov.

Thomas, Charles Mitchell: 1887–88

Lt. Comdr. (later Rear Adm.) Charles Mitchell Thomas, 1846–1908, USN, in command of the U.S. Coast and Geodetic Survey steamer *Patterson*, surveyed and mapped extensively in the Alexander Archipelago. In 1888 surveys of the Portland Canal area were made for the U.S. Department of State. An account of his work was published in the Coast and Geodetic Survey Annual Reports for 1888 and 1889, and his nomenclature was incorporated on Coast and Geodetic Survey Charts 704, 733, and 8227.

Tikhmeniev, P.: 1861–63

P. Tikhmeniev (cnna) is considered by many to be the chief historian of the Russian American Company. He published, in Russian, two volumes, dated 1861 and 1863, titled "Historical Review of the Russian American Company." He is also credited with the authorship of several Russian American Company maps of southeast Alaska which incorporate geographical data known to about 1861, including the explorations of Lt. L. A. Zagoskin, IRN.

Tipping, William: 1786–87. See Meares.

Topham, Harold W.: 1888

In 1888 Harold W. Topham, 1957–1915, his brother Edwin, and George Broke, all of London, and William Williams, of New York, attempted to climb Mount St. Elias. They reached an altitude of 11,460 feet and then turned back. Topham read an account of this trip before the Royal Geographical Society on April 8, 1889. Various accounts of the journey were published in 1889 and 1890.

Turner, John Henry: 1889–91

Assistant John Henry Turner, ?–1893, USC&GS, participated in the Alaskan boundary survey from June 1889 to July 1891. He ascended the Yukon River with John E. McGrath to Fort Yukon, where they separated and Turner continued up the Porcupine River to the Canadian boundary. He established a camp, named Camp Colonna, for his party in August 1889. On March 22, 1890, Turner traveled by sled to the Arctic Ocean, where he arrived on April 8. He began his return the next day and was at Camp Colonna on April 17. He descended the Porcupine and Yukon Rivers to St. Michael, where he remained until July 1891. Turner returned to Alaska in 1892 to continue boundary work but had to leave because of illness.

While in Alaska, Turner collected bird and animal skins at his own expense and gave them to the University of California. Reports of his surveys were published in the U.S. Coast and Geodetic Survey Annual Report for 1891, and an account of his work was published in 1893 in the National Geographic Magazine.

Turner, Lucien McShan: 1874–81. See Nelson.

U.S. Bureau of Fisheries: 1880–1940

The U.S. Fish Commission was established in 1871. In 1880 it became known as the U.S. Fish and Fisheries Commission and in 1903 the Agency was placed under the U.S. Department of Commerce, and the name was changed to U.S. Bureau of Fisheries. In 1939 the Bureau was transferred to the U.S. Department of the Interior. The following year it was merged with the U.S. Bureau of the Biological Survey to form the U.S. Fish and Wildlife Service.

In the 1880's and 1890's this Agency made numerous investigations in Alaskan waters, primarily aboard the steamer *Albatross*, under Lt. Comdr. J. F. Moser and Lt. Comdr. Z. L. Tanner. In this dictionary USBF has been used to refer to personnel working for the agency prior to 1940 and USF&WS for personnel employed since that time. A bibliography of the Bureau of Fisheries publications was compiled in 1920 by Rose M. E. MacDonald. A listing of subsequent Bureau publications was published in 1955 by the Fish and Wildlife Service.

U.S. Bureau of Land Management: 1946– See General Land Office.

U.S. Coast and Geodetic Survey: 1867–

In 1816 the U.S. Survey of the Coast was established within the U.S. Treasury Department. In 1834 the Agency was transferred to the U.S. Navy Department but was returned to the Treasury Department 2 years later and assigned the name U.S. Coast Survey. In 1878 Congress changed the name to U.S. Coast and Geodetic Survey. The Coast and Geodetic Survey was transferred to the newly created U.S. Department of Commerce in 1903. Within this publication, USC&GS has been used to refer to personnel of both the Coast Survey and the Coast and Geodetic Survey.

Since 1867, the Coast and Geodetic Survey has conducted extensive hydrographic and topographic studies in Alaska, from which it has derived material used in its numerous publications, including coast charts, coast pilots, annual reports, and special

FIGURE 17.—*A Russian chart of the Alaska Peninsula from Capt. M. D. Tebenkov's 1852 atlas, map 24 dated 1849. Courtesy of Library of Congress.*

reports. All these publications have been widely used in the preparation of this dictionary.

Many of the earlier charts were of minor value, but as new information was gathered these charts were modernized and greater detail was achieved by producing them on a larger scale. The Agency has published charts of various scales covering the entire coast of Alaska, but particular attention has been paid to harbors of populated areas and to navigation channels. The charts are continually revised to keep them current.

Concurrently with the publication of the coast charts, the Coast and Geodetic Survey has produced a series of coast pilots. These books contain descriptions of harbors and channels, sailing instructions, and aids to navigation. The first Alaskan coast pilot was produced in 1869 under the direction of George Davidson. Information covering the coastline from Dixon Entrance to Cook Inlet was contained in this volume.

There followed a series of coast pilots entitled "Coast Pilot of Alaska, Part I." The first, published in 1883, was a survey of the coast from Dixon Entrance to Yakutat Bay prepared by W. H. Dall and Marcus Baker. It has been a valuable source of reference in the preparation of this dictionary. A later edition covering the same region was prepared by H. E. Nichols and published in 1891. A revised edition was done by Herbert C. Graves, E. H. Francis, and John Ross in 1901. Coast pilots and their supplements for this region have been published intermittently since this date.

In 1908 the Coast and Geodetic Survey published two books entitled "Coast Pilot Notes." One covered the Alaskan coast from Yakutat Bay to Cook Inlet, and the other covered the Bering Sea and Arctic Ocean. Another one followed in 1910 which dealt with Yakutat Bay to Cook Inlet and Shelikof Strait. The first complete coast pilot covering Alaska from Yakutat Bay to the Arctic Ocean came out in 1916. Revised editions and their supplements continue to be published.

Throughout the years there have been special geographic-name field investigations, especially along the coast of Alaska and in the Yukon-Kuskokwim Delta area. These investigations resulted in numerous special reports which for the most part were unpublished. These reports, made available through the courtesy of the Coast and Geodetic Survey, have contributed information for over 300 entries in the present dictionary, especially Eskimo and Aleut names.

The Agency was directly involved in establishing the international boundary between Alaska and Canada. Much of the fieldwork for the project was carried out from 1889 to 1914, particularly by J. H. Turner and J. E. McGrath, USC&GS.

Each year the Coast and Geodetic Survey publishes a report of their operations. Since 1867 these annual reports have given coverage to the operations which took place in Alaska. Names of vessels, personnel involved, and the areas under study were mentioned. Some of the vessels which were active in Alaskan waters were the steamers *Patterson*, *Pathfinder*, *McArthur*, *Gedney*, *Taku*, *Yukon*, *Explorer*, *Wendonah*, and *Pioneer*. The names of the commanders of these vessels appear quite frequently in the discussions of Alaskan activities. Many of them, such as H. E. Nichols, C. M. Thomas, W. S. Moore, E. K. Moore, J. F.

Pratt, J. J. Gilbert, Ferdinand Westdahl, H. P. Ritter, E. F. Dickins, R. B. Derickson, G. T. Rude, F. H. Hardy, and W. C. Dibrell, appear with some frequency in this dictionary. In many entries they are referred to as the individual who recorded the name of a feature and in others as the person who applied the name.

The Coast and Geodetic Survey has been one of the leading agencies in naming features and recording local names.

U.S. Coast Guard: 1915- See U.S. Revenue-Cutter Service.

U.S. Fish and Wildlife Service: 1940-

In 1940 the U.S. Bureau of Fisheries was merged with the U.S. Bureau of the Biological Survey to form the U.S. Fish and Wildlife Service. Personnel of this Agency have given many names to features in Alaska for clarification in administering the wildlife reservations.

U.S. Forest Service

In 1907 President Theodore Roosevelt established forest reserves in Alaska under the names of Chugach National Forest and Tongass National Forest. The original limits of the forests have been altered many times. Over the years U.S. Forest Service personnel have reported names in local use and have occasionally proposed names to meet a need or to commemorate worthwhile persons or deeds.

U.S. Geological Survey: 1889-

The U.S. Geological Survey is considered by many to have begun its work in Alaska in 1889 when I. C. Russell accompanied J. E. McGrath, USC&GS, to the upper Yukon River to determine the position of the Alaska-Canada boundary. Russell then conducted geological investigations in the Mount St. Elias area the following 2 years. The Geological Survey published the results of H. F. Reid's Alaskan glaciological studies, and C. W. Hayes, of the Survey, performed important work with the 1891 Frederick Schwatka expedition.

In 1895 the Geological Survey sent its first independent party to Alaska—W. H. Dall, G. F. Becker, and C. W. Purington made coal and gold surveys along the coast from Sitka to Unalaska. The Klondike gold discoveries in Canada and the great influx of prospectors to Alaska caused the Survey to increase its Alaskan work in 1898, and systematic topographical mapping became an integral part of its Alaskan mineral resources program.

The first years of this survey work were devoted to exploration of main river valleys, then the principal routes of travel. In 1898 the Kuskokwim, Susitna, Nenana, Tanana, and White Rivers were explored and mapped. In the interest of economy, most Geological Survey expeditions consisted of a combined topographical and geological party.

With increased prospecting and mining activity, topographical and geological mapping soon became more localized. Exploratory surveys evolved into more or less detailed mapping of the mining districts. From 1902 to 1907, T. G. Gerdine directed topographical mapping in Alaska with A. H. Brooks, Chief Alaskan Geologist. R. H. Sargent supervised topographical mapping operations after 1907, and each year there were increased demands for more detailed mapping. During this period hundreds

of new names, mostly given by prospectors, were reported by USGS geologists and topographers.

P. S. Smith became Chief Alaskan Geologist in 1924 and directed geological and topographical work in Alaska. Mapping of Naval Petroleum Reserve 4 began in 1923 and continued through the 1926 field season. This work not only filled a geological and topographical void on the map, but also added numerous geographical names in northwestern Alaska.

In the last half of the 1920's aerial photogrammetric work was begun in Alaska as an aid to mapping. With the increased use of this new method, the pattern of Geological Survey work changed. It was no longer necessary for the geologist and topographer to work together. With photogrammetric mapping topographic work developed into control surveys and geographical name investigation became a part of these surveys.

In 1935 Gerald FitzGerald took charge of topographical work in Alaska. Mapping became increasingly detailed, most of it being published at 1:250,000 scale (the older reconnaissance mapping being at 1:500,000 scale). During World War II trimetrogon mapping was developed, and by 1953 Alaska was completely covered by reconnaissance maps at 1:250,000 scale. The proliferation of mapping and geological activities in the last 20 years required special efforts in the field to investigate geographical names. The 1956 Brooks Range control surveys used two men to do name research, and several hundred new local names appeared on the resulting maps. Geological investigations associated with the Naval Petroleum Reserve 4 since World War II also contributed many names in the Alaskan arctic.

U.S. Navy Survey Expedition: 1933-36

From 1933 to 1936 the U.S. Navy conducted hydrographic and coastal surveys in the Aleutian Islands. These expeditions gave many names to unnamed features and reported a large number of names used locally.

U.S. Revenue-Cutter Service: 1865-

The predecessor of the U.S. Revenue-Cutter Service was organized within the U.S. Treasury Department in 1790. From 1843 to 1880 it was known as the U.S. Revenue-Marine Bureau and from 1881 as the U.S. Revenue-Marine Service. In 1897 the name was changed to the Revenue-Cutter Service. In 1915 the Revenue-Cutter Service was merged with the U.S. Life-Saving Service to form the U.S. Coast Guard.

The Revenue-Cutter Service first became involved in Alaska in 1865 when one of its cutters, the *Shubrick*, was chosen as flagship for the Western Union Telegraph Expedition. In 1867, just prior to the purchase of Alaska, the revenue cutter *Lincoln* under Sr. Capt. W. H. Howard carried George Davidson, USC&GS, and four other scientists on a cruise in southern Alaskan waters between Sitka and Unalaska. The following year the *Wayanda* under Capt. J. M. White cruised in the Gulf of Alaska, Bering Sea, and Cook Inlet.

The Revenue-Cutter Service and subsequently the Coast Guard have been active in the Bering Sea and Arctic Ocean every year since 1868. The revenue cutters have transported scientists and explorers from all agencies, including Sheldon Jackson on his annual journeys. The *Bear* carried the first reindeer from Siberia.

The Revenue-Cutter Service often provided medical aid, performed rescues, delivered mail, collected customs, and policed traffic in arms and liquor. Capt. E. E. Smith, aboard the *Corwin*, enumerated the Arctic Eskimo for the 10th Census, in 1880, reporting many place names. A surveillance of salmon fisheries was conducted in 1889. The Revenue-Cutter Service was also charged with policing the activities in respect to fur seals in the Pribilof Islands.

A number of revenue cutters plied Alaska's waters over the years. Early ships were the *Rush*, the *Reliance*, which carried W. H. Elliott on his 1874 cruise, and the *Corwin*, under Capt. Michael A. Healy, which carried G. M. Stoney, USN, to the Kobuk in 1883 and was responsible for bringing Lt. J. C. Cantwell, USRCS, to the same river in 1884 and 1885. Other cutters were the *Grant*, *Perry*, *Wolcott*, and the *Bear*. It was from the *Bear* that Lt. D. H. Jarvis, USRCS, embarked on his 1897-98 rescue mission to the whaling fleet at Point Barrow.

Vancouver, George: 1792-94

Capt. George Vancouver, 1757-98, RN, in command of the sloop *Discovery*, accompanied by Lt. William R. Broughton, RN, in command of the tender *Chatham*, made an exploring and surveying voyage from England to southeastern Alaska and around the world from 1790 to 1795.

In July 1793 the ships reached the entrance to Portland Inlet, from which explorations were made northward past Cape Caamaño, the northernmost point of Spanish discovery. Vancouver, having thus established that the continent extended from the Columbia River to beyond the northern extreme of Prince of Wales Island, retired southward on September 21, 1793, to winter in Hawaii.

In April 1794 the *Discovery* was joined by the *Chatham* at the head of Cook Inlet, and Vancouver's explorations continued eastward to complete the surveys to the line of the preceeding season and disprove any claim for a northwest passage within the limits of his explorations. During this expedition Lt. James Whidbey, RN, was often sent out in a launch by Vancouver to explore the coast in greater detail. Whidbey discovered several features in southeast Alaska which he or Vancouver named. The two ships left Port Conclusion in August 1794 and reached England in September 1795.

Vancouver devoted his remaining years to the compilation of his journal and charts, which were completed after his death by his brother, John Vancouver, and published in 1798 by the British Government in three volumes accompanied by a folio atlas. (See fig. 18.)

Vancouver's expedition is credited with adding a wealth of knowledge and names to the previously ill-defined coastal features of southeastern Alaska. He respected the names applied by traders and foreign officials, and the nomenclature of his charts has been generally accepted.

Cape Vancouver, on the Bering Sea coast northeast of Nunivak Island, and Vancouver Mountain, in the St. Elias Mountains, were named for this navigator.

Vasiliev: 1831-32

Ens. Vasiliev (cnna), IRN, surveyed and mapped a part of the Alaska Peninsula from Cook Inlet west nearly to Chignik

Bay. His map was published by Capt. Lutke in his "Voyage around the world * * * Nautical Part" (1836, p. 274). Vasilief Bay, on the southern coast of Atka Island in the middle Aleutians, was named by Lutke for this navigator, who contributed several names to the area himself.

Vasiliev, Ivan: 1809

Ivan Vasiliev *the first*, IRN, accompanied Capt. L. V. Hagemeister, IRN, to the Russian American colonies on the ship *Neva* in 1806. He remained in southeastern Alaska and in 1809 surveyed the western coast of Baranof Island. His results were incorporated in the Sarichev atlas. Vasilief Bank, Reef, Rock, and Shoal, in southeast Alaska, were probably named for this navigator, who contributed several names to the southeastern part of Alaska.

Vasiliev, Mikhail Nikolaievich: 1819-21

In 1819 Capt. Lt. Mikhail Nikolaievich Vasiliev, IRN, in command of the *Otkrytiye (Discovery)*, with Capt. Lt. G. S. Shishmarev, IRN, on the *Blagonamerenny (Good Intent)*, sailed for the Russian American colonies. In the North Pacific he left Shishmarev and continued to Petropavlovsk, Kamchatka, where he arrived on June 4, 1820. From here, he sailed across the Bering Sea and met Shishmarev at Kotzebue Sound. They cruised along the Arctic coast to Icy Cape and returned via the St. Lawrence and Pribilof Islands to Unalaska, where they arrived on August 19, 1820. Shishmarev left Unalaska for Russia, and Vasiliev continued to Sitka, San Francisco, and the Hawaiian Islands and was back in Sitka on April 7, 1821. He returned to Russia via Unalaska in 1821.

Veniaminov, Ioann: 1824-42

Father Ioann Veniaminov (later Bishop of Alaska and Kamchatka and Metropolitan Archbishop of Moscow), 1797-1879, was sent as a missionary by his church to Unalaska Island, where he arrived on July 29, 1824. From 1824 to 1834 he lived at Unalaska, where he wrote a grammar and dictionary of the Aleut language, published in 1846 in St. Petersburg under the title "Essay toward a Grammar and Dictionary of the Aleutian-Fox Language." This work was translated in 1906 by R. H. Geoghegan. In 1834 Veniaminov was transferred to Sitka where he wrote a brief description of the Tlingit Indian language published in 1840 in St. Petersburg with his "Notes of the Islands of the Unalaska District." Veniaminov went back to Russia in 1838 and was consecrated as Bishop of Alaska on December 15, 1840. He returned to Sitka on September 27, 1841. On May 4, 1842, he left for an inspection tour through his diocese, which eventually took him back to Russia via Kamchatka. Some of Veniaminov's work, translated and interpreted by Geoghegan, proved useful in substantiating meanings of certain Aleut and Tlingit Indian names which appear in this dictionary. Mount Veniaminov on the Alaska Peninsula was named for him.

Waxel, Sven: 1741. See Bering.

Westdahl, Ferdinand, 1900-1902

Assistant Ferdinand Westdahl, USC&GS, in command of the steamer *McArthur*, was engaged in surveying along the coast of Alaska from the south coast of Unimak Island and the Samnak

Islands east to Montague Island and Prince William Sound. His accounts were published in the U.S. Coast and Geodetic Survey Annual Reports for 1901, 1902, and 1903, and the results were incorporated on Coast and Geodetic Survey Charts 8520, 8841, 8860 and 8881.

Westdahl was earlier employed by the Western Union Telegraph Expedition of 1865-67 and by the Alaska Commercial Co. in 1880, but little information pertinent to his earlier work has been found. Westdahl Peak on Unimak Island was named for him.

Western Union Telegraph Expedition: 1865-67

After the failure of the second Atlantic telegraphic cable, the Western Union Telegraph Co., believing that an ocean cable could not succeed, undertook to construct an overland telegraph to Asia and Europe via Bering Strait. For this purpose preparations were made on a large scale, and parties worked, explored, and built some line in British Columbia, Alaska, and Siberia in 1865 and 1866. The Alaska section was under the leadership of the explorer and naturalist Robert Kennicott, 1835-66. Kennicott organized a scientific corps of six naturalists, including W. H. Dall, to accompany the Expedition. Frederick Whympier, an English artist, also traveled with the Alaska section. The expedition in Alaska was divided into two groups, one to explore the Yukon east of Nulato, the other to explore between Nulato and the Bering Strait. When in 1866 the Atlantic cable proved to be a success, the enterprise was abandoned and the geographic information was scattered. No inclusive account of the venture was published although several manuscript maps were made and a manuscript newspaper entitled "The Esquimaux" was assembled by the group at Teller. The newspapers were later printed in San Francisco as a memento of the expedition.

Whidbey, James: 1792-94. See Vancouver.

Whympier, Frederick, 1865-67. See Western Union Telegraph Expedition.

Woronkofski: 1836

In 1836 Lt. Woronkofski (cnna), IRN, was in the employ of the Russian American Company, under whose directive he surveyed the southern coast of the Alaska Peninsula while in command of the transport *Kadiak*. His survey extended from the vicinity of Chignik Bay where Ens. Vasiliev's work ended in 1832, west to Unimak Pass, connecting with Capt. M. N. Staniukovich's survey of the northern coast in 1828. In 1837 Woronkofski also made surveys in the Shumagin Islands. The results of his work were published in 1847 on Russian Hydrographic Department Chart 1379. Woronkofski Island and Point in the Alexander Archipelago were named for this navigator.

Wosnesenski, Ilia G.: 1842-43

In 1839 Ilia G. Wosnesenski was sent to Alaska by the Imperial Academy of Sciences of St. Petersburg to make scientific collections. He spent the years of 1840-41 in California and was in the Aleutian Islands and western Alaska in 1842-43 where he explored, collected, and made observations. Wosnesenski Glacier, on the Kenai Peninsula, and Wosnesenski Island, off the south coast of the Alaska Peninsula, were named for this scientist.

FIGURE 19.—An 1898 manuscript map of Haines Mission and surrounding country, by William Yanert, USA.

Yanert, William: 1897-1952

Sgt. William Yanert, 1864–1952, USA, came to Alaska in 1897 to report on the trail from Skagway to Lake Bennett. (See fig. 19.) After working under Capt. E. F. Glenn, USA, with the Alaska military expedition of 1898, Yanert, in a civilian capacity, went to St. Michael and accompanied Lt. Hjalmar Erickson, USA, in 1900–1901 on a search for a military road route between Rampart and Eagle. Yanert settled in the Yukon Flats at a place he called Purgatory. He made a compass survey map of the

Yukon Flats around Purgatory in 1916, and it was published by Hudson Stuck in the following year.

Young, Samuel Hall. See Muir.

Zagoskin, Laurenti Alexief: 1842–45

From 1842 to 1845, while in the employ of the Russian American Company, Lt. Laurenti Alexieff Zagoskin, 1808-90, IRN, made explorations and surveys on the lower Yukon River, on the Kuskokwim River, and in the Norton Sound area. An account of his work, including some maps of the areas he covered, was

published in 1847 in St. Petersburg. These maps proved to be extremely useful in substantiating early Eskimo names of streams and settlements in the Yukon-Kuskokwim Delta and Norton Sound areas. His surveys extended from the junction of the Kateel and Koyukuk Rivers, in March 1843, to a point on the Yukon River below the mouth of the Tozitna River in June 1843, and to the junction of the Takotna and Kuskokwim Rivers in June 1844.

Zane, Abraham Vanhoy: 1885-86. See Stoney.

Zarembo, Dionysius Fedorovich: 1834-39

Capt. Lt. Dionysius Fedorovich Zarembo, IRN, in command of the brig *Chichagof*, surveyed Wrangell Harbor, in southeast Alaska, in 1834. The same year he founded the present town of Wrangell and built a stockade here which was named for him. In 1838 he surveyed and named Woewodski Harbor on the south side of Admiralty Island in the Alexander Archipelago. Zarembo's maps were published in 1848 as insets on Russian Hydrographic Department Chart 1396.

The application of the name gradually developed from this beginning to include the whole area (Stewart, 1956, p. 203). The Russians officially designated it "Russian America" prior to its 1867 purchase by the United States. The name "Alaska" was proposed in 1867 for official acceptance by W. H. Seward, U.S. Secretary of State, the Honorable Charles Sumner, Senator and chairman of the Committee on Foreign Relations, and by Maj. General H. W. Halleck, Commander of the Military Division of the Pacific. There is some controversy over which of these three men proposed the name first (ibid., p. 198-203). Authoritative sources generally agree that the name "Alaska" is derived from "an Aleut root meaning 'a great country or continent' * * *" or " * * * 'mainland' * * *" (Stewart, 1956, p. 193-203).

In 1762, Bechevin (cnna), a merchant of Irkutsk, Siberia, wintered in Isanotski Strait between Unimak Island and the Alaska Peninsula. He regarded the western end of the peninsula as an island, reportedly called "Alaksu" or "Alakshak" (Bancroft, 1886, p. 122-124 and 165). Capt. Lt. P. K. Krenitzin and Lt. Michael Levashev, IRN, in 1768, also referred to a large island called "Alaxa" north-east of Unimak Island (Coxe, 1787, map facing p. 205).

The first to correctly apply the name was Capt. James Cook (1785, v. 2, p. 504), RN, in 1778, who said "I have already observed that the American continent is here called by the Russians, as well as the islanders, Alashka, which name, though it properly belongs only to the country adjoining to Oonemak [Unimak Island], is used by them when speaking of the American continent in general, which they know perfectly well to be a great land."

After the publication of Cook's work, the name was generally applied (with various spellings) to the peninsula; Lt. Sarichev (1826, map 3), IRN, used "Mys Alyaksa" or "Alyaksa Cape [headland]" on a 1791 map and Capt. Lutke (1836, p. 257), IRN, reported it as "Presquile D'Alaska" meaning "Alaska Peninsula." The Aleut name "Alakhshhak" was recorded by Father Veniaminov (1840, v. 1, p. 220) and Capt. Tebenkov

(1852, map 24), IRN, applied the name "Polouostrov Alyaska" or "Alaska Peninsula."

The name and its application to the State and peninsula was well established in the late 1880's when W. H. Dall (1870, p. 129-30) wrote: " * * * This name, now applied to the whole of our new territory, is a corruption, very far removed from the original word. * * * called by the natives Al-ák-shak or Al-áy-ek-sa * * *. From Aláyeksa the name became, * * * Aláksa, Aláshka, Aliáksa, and finally Aláksa * * *. We have, then Alaska for the territory, Aliaska for the peninsula * * *."

Alaska Range: *mountain range*, extends in an arc 650 mi. from Iliamna Lake at SW end to White River in Canada at SE end; highest point is Mount McKinley at 20,320 ft.; 62°00' N, 141°00' W [SE end], 59°45' N, 156°00' [SW end]. Var. Alaskan Mountains, Alaskan Range, Beaver Mountains, Chigmit Mountains, Khrebet Chigmit, Tschigmit Mountains.

The name "Alaskan Range" appears to be first applied to these mountains in 1869 by Dall (1870, p. 286). The name eventually became "Alaska Range" through local use. In 1849 Constantin Grewingk applied the name "Tschigmit" to this mountain range. "A map made by the United States Land Office, 1869, calls the southwestern part of the Alaska Range Chigmit mountains and the north-eastern part Beaver mountains" (Baker, 1906, p. 176). See Alaska and Alaska Peninsula.

Koyukan Indian name reported in 1885 by Lt. Allen (1887, p. 98), USA, as "Allenkaket," or "mouth of the Allen." We do not

know if this was an attempt by Allen to commemorate himself or whether it was an unintentional corruption of "Allakaket," or "mouth of Ala." Archdeacon Stuck (1917, p. 341) thinks the latter is true, and that all white men (in 1917) corrupted "Allakaket" to "Allenkaket" because the pronunciation was easier for those speaking English. The present spelling appears to have been obtained in 1899 by F. C. Schrader and T. G. Gerdine, USGS, although the latter still showed "Al-lenkakat River" on his fieldsheet. The Eskimo name for this stream is "Alasuk," spelled in 1886 by Lt. Stoney (1900, map), USN, "Al-lash-ook" and in 1885 by Lt. Cantwell, USRCS, "Ah-lash-ok" (Healy, 1887, p. 39). W. C. Mendenhall and D. L. Reaburn's 1901 USGS expedition showed the "Alatna" and "Alasuk," which since 1885 had been represented as different streams, to be the same. The present Indian name came to be the most commonly accepted name.

Jackson (1886, p. 57) stated that the name "Alaknakik" means "well studded with beautiful pine-covered islands" which seems a bit fanciful but may carry the general meaning. From a trader named Mittendorf, J. E. Spurr and W. S. Post, USGS, recorded the name as "Agoulouikatuk," meaning "testicle."

This is probably the village referred to by Ameigh and Chaffin (1962, p. 53) who said, "the 157 natives living on Woody Island in a little village of approximately fifteen log cabins, made their living during the summer months as sea otter hunters * * *." Name derived from Point Barrow, and was originally a general designation, because "white" residents found it easier to pronounce than the Eskimo name. A post office established in 1901 helped the name "Barrow" to become dominant. The Eskimo name, best rendered "Utkiavik," refers in meaning to a "high place for viewing," so named because it was situated on relatively high (30 ft.) land at Cape Smyth. Although Capt. Beechey's party (1831, p. 307), RN, mentions a village at Cape Smyth in 1826, the name was first recorded in 1853 as "Ot-ki-a-wing" by Comdr. Rockfort Maguire, RN (Great Britain, 1854, map facing p. 186). John Simpson's native map dated 1855, records the name "Otkiawik," which was printed on the subsequent Brit. Adm. Chart as "Otkiovik." Lt. P. H. Ray's party established a station located one-half mile northeast of the native village for meteorologic and magnetic observations in 1881. They called the station "Ooglaamie" or "Uglamie," a name that was later often transferred to the village (Murdoch, 1892, p. 26), USA. See Cape Smyth and Browerville.

The point was discovered by Thomas Elson, William Smyth, and the crew whom Beechey sent in an open boat to explore northward when his ship, the *HMS Blossom*, was unable to proceed farther. The Eskimo name for the point is "Nuwak" meaning "point of land." The name "Cape North," originally applied by Thomas Simpson, had some use on early charts before the present name became established.

On August 4, 1826, Sir John Franklin (1828, p. 146), assuming it part of the mainland, applied the name "Point Manning" to the E point of this island. Franklin's original "Barter Island" was renamed "Arey Island" by Leffingwell (1919, p. 93), because local usage had applied the name Barter Island to the above location. John Simpson's native map, dated 1855, shows "Tungak Island," and on what appears to be present-day Manning Point the Eskimo name "Nu-wu-ak Point" is shown with the note "the place of barter." This is probably the source of the name Barter Island. Leffingwell gives the Eskimo name for the island as "Kaktoavik" meaning "seining place." Vilhjalmur Stefansson spells this name "Kaaktovik." The October 28, 1741 (O.S.), entry in the log book of the *St. Peter*, commanded by Vitus Bering, reads "By the will of God Stephan Buldirev [later written Stephan Bogdriev], naval cooper, died of scurvy" (Golder, 1922, p. 201). The same day Bering named an island "St. Stephen." Many scholars, including Golder, correlate the island of Bering with that of present-day Buldir Island, and, if so, it may have been named for the sailor that died on its discovery day. The name "Ostrov Buldir" was published on a 1791 map by Lt. Sarichev (1826, map 3), IRN, and thus he may be responsible for the naming.

Baker (1906, p. 151), USGS, gives the meaning of "Buldir" as "hut (or hovel)," implying a descriptive name. Von Langsdorff (1813-14, v. 2, p. 247) appears to translate the name as "round".

"Hog'em Gulch received its name from the fact that the discoverer tried to hold a large part of the richest diggings, taking up separate claims for the whole of his numerous family, and, it is said by some, for fictitious personages. When other miners came to the gulch and a meeting was held, among other things the question of naming the diggings came up, and one miner suggested that 'Hog'em' would be appropriate. This suggestion was not officially adopted, and the name Deadwood was given the gulch as being more dignified, but the original nickname has persisted and among most of the miners is used almost exclusively" (Spurr, 1898, p. 342).
