Eskimo name reported in 1899 as "Koo-groog" by Schrader and Brooks (1900, map 3), USGS. This appears to be the stream that Ivan Petroff in 1880 named "Mammoth" "from the occurrence of Mammoth bones in the vicinity" (Baker, 1906, p. 424). Reported as "Swan River" in 1901 by D. L. Reaburn (in Mendenhall, 1902, pl. 42), USGS.

In 1904, after USGS had completed reconnaissance mapping of Seward Peninsula, attention was called to the fact that three major rivers on the peninsula were named "Kugruk." Action was then taken to change these names. The above river was retained as Kugruk since that is the way it was used in court records. The Kugruk River which flows to the Kuzitrin River was changed to Kougarok River, because, as A. J. Collier, USGS, stated in a letter, "it has always been pronounced locally as Koogarak, and so appears on all claim notices. When I first heard the name in 1900, I fancied that it had reference to the Rocky Mountain lion as cougar. In court records it is usually spelled 'Kougarok,' and the mining district is the Kougarok district." The Kugruk River which flows northwest to the Chukchi Sea was changed to Kugrupaga River because that was the name shown on the Monroe and Hutchin's map prepared under direction of the court in 1901. Since no gold of economic value had yet been found on this stream, it was felt this change could be effected without inconvenience.

Although it is shown as a large lake on Kuskokwim-Yukon Portage, its exact identity cannot be determined. R. H. Sargent, USGS, who traversed the portage in 1916, placed the name on the lake immediately south of Kulik Lake, in a location verified by USC&GS in 1949. The U.S. Army Corps of Engineers, however, applied the name to Kukaklik Lake's present location in 1952. Authorities give the Eskimo name with various spellings. They may represent two names for this feature, or confusion in the application of names to the "portage lakes." Capt. R. W. Raymond, USA, called it "Ookakhl" and "Oakakhl," in 1869, and W. S. Post, USGS, called it "Oknakluk" in 1898.

According to Lt. Sarichev (1802, v. 2, p. 82), IRN, this name was published by the Russians as "M[ys] Makushinskoy" or "Cape Makushin." The USBF used the generic "Point" in 1888.

Russian name, probably derived from the word "makushka," meaning "the crown (of the head)" or "top," and applied to this feature because it is the highest point on Unalaska Island. This volcano was called "Ognedyshushchaya Gora" meaning "burning mountain" by Sarichev (1826, map 14, dated 1792), IRN. Sarichev also called it "Ayyagyh" (1802, v. 2, p. 132). Rev. Cox (1787, p. 210) wrote "there is a burning mountain here called 'Ayagish.'" These native names are probably derived from the Aleutian word "ayaq" which, according to R. H. Geoghegan, is the name applied to Makushin Volcano on Unalaska I. This Aleut word may possibly come from the words "ai-gay" meaning "greater, larger," and "kigusiq," meaning "volcano." Bank (1956, p. 24) reported "an old Aleut legend which told of a great battle that had occurred between the Makushin and Recesnoi, one of the volcanoes on the next island to the west. As the legend relates, Makushin still smokes a little, resting and waiting while the other volcano is quiet, extinguished in the duel."

Translation by USC&GS of "Os[tr]ov Yevrashichey," from the Russian "Yevrashka," published by Sarichev (1826, map 5). Otto von Kotzebue (in Baker, 1906, p. 426) says "An animal in many respects similar to the squirrel; but it is much larger and lives in the earth; it is called in Siberia 'Gewraschka.' The Americans call it 'Tschikschi' [probably from the Eskimo 'Sikrik' or 'Siksik' meaning 'ground squirrel']." In 1890 the U.S. Census Bureau (11th Census, 1893, p. 73) reports "The only land animals [on Marmot Island] are the foxes and myriads of ground squirrels (spermophilus), * * *. These rodents are called 'yevrashka' in Russian. This word our mapmakers erroneously translated 'marmot,' and thus misnamed the island * * *." Father Veniaminov (1846, p. 63) published the Aleut name "Uhnik" [for Yevrashka] from "ulngiq" which according to R. H. Geoghegan, means "ground squirrel." This island was named "St. Hermogenes" on May 25, 1778, by Capt. Cook (1785, v. 2, p. 384) and "Isla de Camacho" in 1779 by Don Juan Francisco de la Bodega y Quadra and Francisco Antonio Maurelle (Baker, 1906, p. 426). Wagner (1937, p. 437) says, "Afognak Island is drawn so out of place on Camacho's map that I have grave doubts about this being Marmot Island, as identified by Baker. It has more the appearance of being Afognak Island proper." The name given by Quadra and Maurelle was probably for the navigator Josef Camacho who copied their map.

Schrader and Brooks (1900, p. 11), USGS, who visited the town in October 1899, spoke of the "thriving young city of Nome, first called Anvil City, now officially Nome." Gold was found in the area in the summer of 1898 and the town got its start in October 1898 when six men met at the mouth of the Snake River and formed the Cape Nome mining district. The short-lived name "Anvil City" was derived from Anvil Creek, where the first major gold was found. In June, 1899, gold was found on the beaches of Nome and by August a number of men were prospecting the beaches. The news of the gold strike was carried to the States that winter and in early summer 1900 the rush was on. At the peak that summer there were 30,000 people at Nome, but 16,000 left in 13 weeks (Rickard, 1909, p. 308-337). Nome incorporated on April 9, 1901. The population was 12,488 in 1900; 2,600 in 1910; 852 in 1920; 1,213 in 1930; 1,559 in 1939; and 1,876 in 1950. A post office was established here in 1899 (Ricks, 1965, p. 47-48). The city is now the commercial hub of northwestern Alaska and has also become a center for Eskimo handicrafts.

"C[ape] Nome" appears on the 1853 Brit. Adm. Chart 2172. Its origin is generally attributed to an Admiralty draftsman's misinterpretation of "? name" annotated on a manuscript chart constructed on board the H.M.S. *Herald* about 1850-1852. The "?" mark was taken as a "C" and the "a" was thought to be an "o." This is the explanation given by the Chief Cartographer of the British Admiralty in 1900.

When he temporarily left for a few months, the Indians burned it. In 1839 the same thing happened. In 1841 Vasili Derzhavin (Derabin) was sent by the Russian American Company to the post. Again, in 1842, it was built and consisted of several detached log houses without a stockade. In the spring of 1851 the post was surprised by Koyukan Indians and most of its inhabitants killed, including Derzhavin and an English naval officer from the H.M.S. *Enterprise*, Lt. Barnard, who was sent inland in search for information about Sir John Franklin and his party. A new fort surrounded by a stockade was built 2 or 3 years later at the village's present location 2 miles up the Yukon (Bancroft, 1886, 572-574).
